Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.
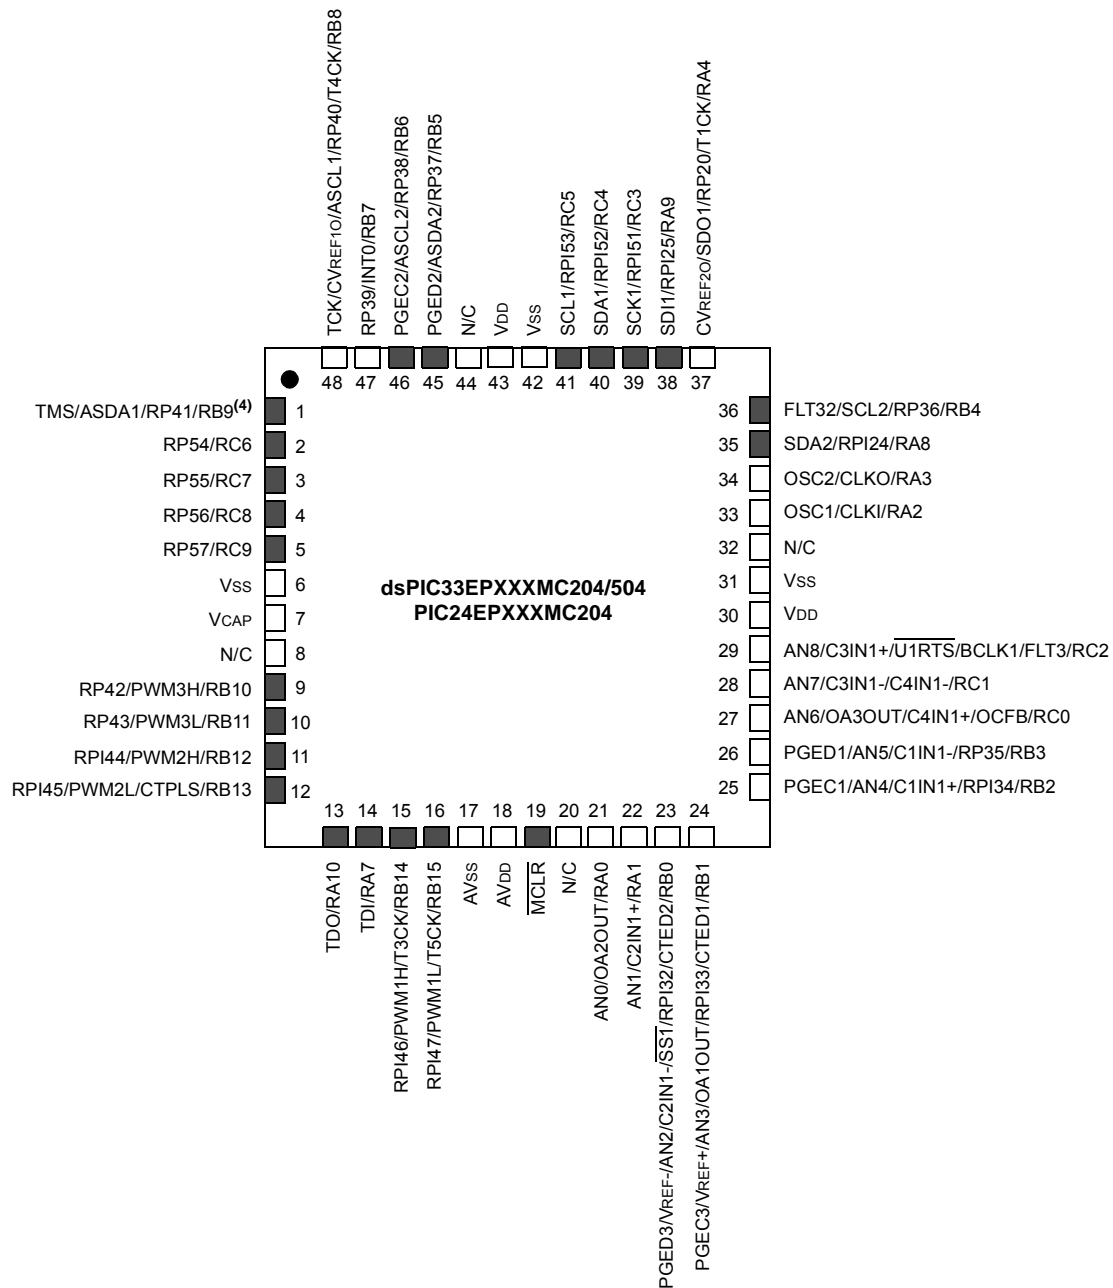

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	PIC
Core Size	16-Bit
Speed	70 MIPs
Connectivity	I²C, IrDA, LINbus, QEI, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, DMA, Motor Control PWM, POR, PWM, WDT
Number of I/O	21
Program Memory Size	64KB (22K x 24)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	4K x 16
Voltage - Supply (Vcc/Vdd)	3V ~ 3.6V
Data Converters	A/D 6x10b/12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	28-VQFN Exposed Pad
Supplier Device Package	28-QFN-S (6x6)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic24ep64mc202-i-mm

Pin Diagrams (Continued)

48-Pin UQFN[1,2,3]

■ = Pins are up to 5V tolerant

Top pins (48–37):
- 48 TCK/CV_{REF}10/ASCL1/RP40/T4CK/RB8
- 47 RP39/INT0/RB7
- 46 PGEC2/ASCL2/RP38/RB6
- 45 PGED2/ASDA2/RP37/RB5
- 44 N/C
- 43 V_{DD}
- 42 V_{SS}
- 41 SCL1/RPI53/RC5
- 40 SDA1/RPI52/RC4
- 39 SCK1/RPI51/RC3
- 38 SDI1/RPI25/RA9
- 37 CV_{REF}2O/SDO1/RP20/T1CK/RA4

Left pins (1–12):
- 1 TMS/ASDA1/RP41/RB9[4]
- 2 RP54/RC6
- 3 RP55/RC7
- 4 RP56/RC8
- 5 RP57/RC9
- 6 V_{SS}
- 7 V_{CAP}
- 8 N/C
- 9 RP42/PWM3H/RB10
- 10 RP43/PWM3L/RB11
- 11 RPI44/PWM2H/RB12
- 12 RPI45/PWM2L/CTPLS/RB13

Device: dsPIC33EPXXXMC204/504 / PIC24EPXXXMC204

Right pins (36–25):
- 36 FLT32/SCL2/RP36/RB4
- 35 SDA2/RPI24/RA8
- 34 OSC2/CLKO/RA3
- 33 OSC1/CLKI/RA2
- 32 N/C
- 31 V_{SS}
- 30 V_{DD}
- 29 AN8/C3IN1+/U1RTS/BCLK1/FLT3/RC2
- 28 AN7/C3IN1-/C4IN1-/RC1
- 27 AN6/OA3OUT/C4IN1+/OCFB/RC0
- 26 PGED1/AN5/C1IN1-/RP35/RB3
- 25 PGEC1/AN4/C1IN1+/RPI34/RB2

Bottom pins (13–24):
- 13 TDO/RA10
- 14 TDI/RA7
- 15 RPI46/PWM1H/T3CK/RB14
- 16 RPI47/PWM1L/T5CK/RB15
- 17 AV_{SS}
- 18 AV_{DD}
- 19 MCLR
- 20 N/C
- 21 AN0/OA2OUT/RA0
- 22 AN1/C2IN1+/RA1
- 23 PGED3/V_{REF}-/AN2/C2IN1-/SS1/RPI32/CTED2/RB0
- 24 PGEC3/V_{REF}+/AN3/OA1OUT/RPI33/CTED1/RB1

Note 1: The RPn/RPIn pins can be used by any remappable peripheral with some limitation. See **Section 11.4 "Peripheral Pin Select (PPS)"** for available peripherals and for information on limitations.

2: Every I/O port pin (RAx-RGx) can be used as a Change Notification pin (CNAx-CNGx). See **Section 11.0 "I/O Ports"** for more information.

3: The metal pad at the bottom of the device is not connected to any pins and is recommended to be connected to V_{SS} externally.

4: There is an internal pull-up resistor connected to the TMS pin when the JTAG interface is active. See the JTAGEN bit field in Table 27-2.

4.2   Data Address Space

The dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X CPU has a separate 16-bit-wide data memory space. The Data Space is accessed using separate Address Generation Units (AGUs) for read and write operations. The data memory maps, which are presented by device family and memory size, are shown in Figure 4-7 through Figure 4-16.

All Effective Addresses (EAs) in the data memory space are 16 bits wide and point to bytes within the Data Space. This arrangement gives a base Data Space address range of 64 Kbytes (32K words).

The base Data Space address is used in conjunction with a Read or Write Page register (DSRPAG or DSWPAG) to form an Extended Data Space, which has a total address range of 16 Mbytes.

dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X devices implement up to 52 Kbytes of data memory (4 Kbytes of data memory for Special Function Registers and up to 48 Kbytes of data memory for RAM). If an EA points to a location outside of this area, an all-zero word or byte is returned.

4.2.1   DATA SPACE WIDTH

The data memory space is organized in byte-addressable, 16-bit-wide blocks. Data is aligned in data memory and registers as 16-bit words, but all Data Space EAs resolve to bytes. The Least Significant Bytes (LSBs) of each word have even addresses, while the Most Significant Bytes (MSBs) have odd addresses.

4.2.2   DATA MEMORY ORGANIZATION AND ALIGNMENT

To maintain backward compatibility with PIC® MCU devices and improve Data Space memory usage efficiency, the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X instruction set supports both word and byte operations. As a consequence of byte accessibility, all Effective Address calculations are internally scaled to step through word-aligned memory. For example, the core recognizes that Post-Modified Register Indirect Addressing mode [Ws++] results in a value of Ws + 1 for byte operations and Ws + 2 for word operations.

A data byte read, reads the complete word that contains the byte, using the LSb of any EA to determine which byte to select. The selected byte is placed onto the LSB of the data path. That is, data memory and registers are organized as two parallel, byte-wide entities with shared (word) address decode but separate write lines. Data byte writes only write to the corresponding side of the array or register that matches the byte address.

All word accesses must be aligned to an even address. Misaligned word data fetches are not supported, so care must be taken when mixing byte and word operations, or translating from 8-bit MCU code. If a misaligned read or write is attempted, an address error trap is generated. If the error occurred on a read, the instruction underway is completed. If the error occurred on a write, the instruction is executed but the write does not occur. In either case, a trap is then executed, allowing the system and/or user application to examine the machine state prior to execution of the address Fault.

All byte loads into any W register are loaded into the LSB. The MSB is not modified.

A Sign-Extend (SE) instruction is provided to allow user applications to translate 8-bit signed data to 16-bit signed values. Alternatively, for 16-bit unsigned data, user applications can clear the MSB of any W register by executing a Zero-Extend (ZE) instruction on the appropriate address.

4.2.3   SFR SPACE

The first 4 Kbytes of the Near Data Space, from 0x0000 to 0x0FFF, is primarily occupied by Special Function Registers (SFRs). These are used by the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X core and peripheral modules for controlling the operation of the device.

SFRs are distributed among the modules that they control and are generally grouped together by module. Much of the SFR space contains unused addresses; these are read as '0'.

> **Note:** The actual set of peripheral features and interrupts varies by the device. Refer to the corresponding device tables and pinout diagrams for device-specific information.

4.2.4   NEAR DATA SPACE

The 8-Kbyte area, between 0x0000 and 0x1FFF, is referred to as the Near Data Space. Locations in this space are directly addressable through a 13-bit absolute address field within all memory direct instructions. Additionally, the whole Data Space is addressable using MOV instructions, which support Memory Direct Addressing mode with a 16-bit address field, or by using Indirect Addressing mode using a working register as an Address Pointer.

10.3 Doze Mode

The preferred strategies for reducing power consumption are changing clock speed and invoking one of the power-saving modes. In some circumstances, this cannot be practical. For example, it may be necessary for an application to maintain uninterrupted synchronous communication, even while it is doing nothing else. Reducing system clock speed can introduce communication errors, while using a power-saving mode can stop communications completely.

Doze mode is a simple and effective alternative method to reduce power consumption while the device is still executing code. In this mode, the system clock continues to operate from the same source and at the same speed. Peripheral modules continue to be clocked at the same speed, while the CPU clock speed is reduced. Synchronization between the two clock domains is maintained, allowing the peripherals to access the SFRs while the CPU executes code at a slower rate.

Doze mode is enabled by setting the DOZEN bit (CLKDIV<11>). The ratio between peripheral and core clock speed is determined by the DOZE<2:0> bits (CLKDIV<14:12>). There are eight possible configurations, from 1:1 to 1:128, with 1:1 being the default setting.

Programs can use Doze mode to selectively reduce power consumption in event-driven applications. This allows clock-sensitive functions, such as synchronous communications, to continue without interruption while the CPU Idles, waiting for something to invoke an interrupt routine. An automatic return to full-speed CPU operation on interrupts can be enabled by setting the ROI bit (CLKDIV<15>). By default, interrupt events have no effect on Doze mode operation.

For example, suppose the device is operating at 20 MIPS and the ECAN™ module has been configured for 500 kbps, based on this device operating speed. If the device is placed in Doze mode with a clock frequency ratio of 1:4, the ECAN module continues to communicate at the required bit rate of 500 kbps, but the CPU now starts executing instructions at a frequency of 5 MIPS.

10.4 Peripheral Module Disable

The Peripheral Module Disable (PMD) registers provide a method to disable a peripheral module by stopping all clock sources supplied to that module. When a peripheral is disabled using the appropriate PMD control bit, the peripheral is in a minimum power consumption state. The control and status registers associated with the peripheral are also disabled, so writes to those registers do not have effect and read values are invalid.

A peripheral module is enabled only if both the associated bit in the PMD register is cleared and the peripheral is supported by the specific dsPIC® DSC variant. If the peripheral is present in the device, it is enabled in the PMD register by default.

Note:	If a PMD bit is set, the corresponding module is disabled after a delay of one instruction cycle. Similarly, if a PMD bit is cleared, the corresponding module is enabled after a delay of one instruction cycle (assuming the module control registers are already configured to enable module operation).

10.5 Power-Saving Resources

Many useful resources are provided on the main product page of the Microchip web site for the devices listed in this data sheet. This product page, which can be accessed using this link, contains the latest updates and additional information.

Note:	In the event you are not able to access the product page using the link above, enter this URL in your browser: http://www.microchip.com/wwwproducts/ Devices.aspx?dDocName=en555464

11100 = Reserved
11011 = Reserved
11010 = Channel 0 positive input is the output of OA3/AN6[2,3]
11001 = Channel 0 positive input is the output of OA2/AN0[2]
11000 = Channel 0 positive input is the output of OA1/AN3[2]
10110 = Reserved
•
•
•
10000 = Reserved
01111 = Channel 0 positive input is AN15[1,3]
01110 = Channel 0 positive input is AN14[1,3]
01101 = Channel 0 positive input is AN13[1,3]
•
•
•
00010 = Channel 0 positive input is AN2[1,3]
00001 = Channel 0 positive input is AN1[1,3]
00000 = Channel 0 positive input is AN0[1,3]

Note 1: AN0 through AN7 are repurposed when comparator and op amp functionality is enabled. See Figure 23-1 to determine how enabling a particular op amp or comparator affects selection choices for Channels 1, 2 and 3.

2: The OAx input is used if the corresponding op amp is selected (OPMODE (CMxCON<10>) = 1); otherwise, the ANx input is used.

3: See the **"Pin Diagrams"** section for the available analog channels for each device.

24.2 PTG Resources

Many useful resources are provided on the main product page of the Microchip web site for the devices listed in this data sheet. This product page, which can be accessed using this link, contains the latest updates and additional information.

> **Note:** In the event you are not able to access the product page using the link above, enter this URL in your browser: http://www.microchip.com/wwwproducts/Devices.aspx?dDocName=en555464

24.2.1 KEY RESOURCES

- **"Peripheral Trigger Generator"** (DS70669) in the *"dsPIC33/PIC24 Family Reference Manual"*
- Code Samples
- Application Notes
- Software Libraries
- Webinars
- All Related *"dsPIC33/PIC24 Family Reference Manual"* Sections
- Development Tools

TABLE 24-1: PTG STEP COMMAND FORMAT (CONTINUED)

bit 3-0	Step Command	OPTION<3:0>	Option Description
	PTGWHI[1] or PTGWLO[1]	0000	PWM Special Event Trigger.[3]
		0001	PWM master time base synchronization output.[3]
		0010	PWM1 interrupt.[3]
		0011	PWM2 interrupt.[3]
		0100	PWM3 interrupt.[3]
		0101	Reserved.
		0110	Reserved.
		0111	OC1 Trigger event.
		1000	OC2 Trigger event.
		1001	IC1 Trigger event.
		1010	CMP1 Trigger event.
		1011	CMP2 Trigger event.
		1100	CMP3 Trigger event.
		1101	CMP4 Trigger event.
		1110	ADC conversion done interrupt.
		1111	INT2 external interrupt.
	PTGIRQ[1]	0000	Generate PTG Interrupt 0.
		0001	Generate PTG Interrupt 1.
		0010	Generate PTG Interrupt 2.
		0011	Generate PTG Interrupt 3.
		0100	Reserved.
		• • •	• • •
		1111	Reserved.
	PTGTRIG[2]	00000	PTGO0.
		00001	PTGO1.
		• • •	• • •
		11110	PTGO30.
		11111	PTGO31.

Note 1: All reserved commands or options will execute but have no effect (i.e., execute as a NOP instruction).

2: Refer to Table 24-2 for the trigger output descriptions.

3: This feature is only available on dsPIC33EPXXXMC20X/50X and PIC24EPXXXMC20X devices.

25.3 Op Amp/Comparator Registers

REGISTER 25-1: CMSTAT: OP AMP/COMPARATOR STATUS REGISTER

R/W-0	U-0	U-0	U-0	R-0	R-0	R-0	R-0
PSIDL	—	—	—	C4EVT[1]	C3EVT[1]	C2EVT[1]	C1EVT[1]
bit 15							bit 8

U-0	U-0	U-0	U-0	R-0	R-0	R-0	R-0
—	—	—	—	C4OUT[2]	C3OUT[2]	C2OUT[2]	C1OUT[2]
bit 7							bit 0

Legend:		
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 15 **PSIDL:** Comparator Stop in Idle Mode bit

1 = Discontinues operation of all comparators when device enters Idle mode
0 = Continues operation of all comparators in Idle mode

bit 14-12 **Unimplemented:** Read as '0'

bit 11 **C4EVT:** Op Amp/Comparator 4 Event Status bit[1]

1 = Op amp/comparator event occurred
0 = Op amp/comparator event did not occur

bit 10 **C3EVT:** Comparator 3 Event Status bit[1]

1 = Comparator event occurred
0 = Comparator event did not occur

bit 9 **C2EVT:** Comparator 2 Event Status bit[1]

1 = Comparator event occurred
0 = Comparator event did not occur

bit 8 **C1EVT:** Comparator 1 Event Status bit[1]

1 = Comparator event occurred
0 = Comparator event did not occur

bit 7-4 **Unimplemented:** Read as '0'

bit 3 **C4OUT:** Comparator 4 Output Status bit[2]

When CPOL = 0:
1 = $V_{IN}+ > V_{IN}-$
0 = $V_{IN}+ < V_{IN}-$

When CPOL = 1:
1 = $V_{IN}+ < V_{IN}-$
0 = $V_{IN}+ > V_{IN}-$

bit 2 **C3OUT:** Comparator 3 Output Status bit[2]

When CPOL = 0:
1 = $V_{IN}+ > V_{IN}-$
0 = $V_{IN}+ < V_{IN}-$

When CPOL = 1:
1 = $V_{IN}+ < V_{IN}-$
0 = $V_{IN}+ > V_{IN}-$

Note 1: Reflects the value of the of the CEVT bit in the respective Op Amp/Comparator Control register, CMxCON<9>.

2: Reflects the value of the COUT bit in the respective Op Amp/Comparator Control register, CMxCON<8>.

Revision D (December 2011)

This revision includes typographical and formatting changes throughout the data sheet text.

All other major changes are referenced by their respective section in Table A-3.

TABLE A-3: **MAJOR SECTION UPDATES**

Section Name	Update Description
"16-bit Microcontrollers and Digital Signal Controllers (up to 512-Kbyte Flash and 48-Kbyte SRAM) with High-Speed PWM, Op amps, and Advanced Analog"	Removed the Analog Comparators column and updated the Op amps/Comparators column in Table 1 and Table 2.
Section 21.0 "Enhanced CAN (ECAN™) Module (dsPIC33EPXXXGP/MC50X Devices Only)"	Updated the CANCKS bit value definitions in CiCTRL1: ECAN Control Register 1 (see Register 21-1).
Section 30.0 "Electrical Characteristics"	Updated the V_{BOR} specifications and/or its related note in the following electrical characteristics tables: • Table 30-1 • Table 30-4 • Table 30-12 • Table 30-14 • Table 30-15 • Table 30-16 • Table 30-56 • Table 30-57 • Table 30-58 • Table 30-59 • Table 30-60

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: http://microchip.com/support

NOTES:
