
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	MIPS32® M4K™
Core Size	32-Bit Single-Core
Speed	80MHz
Connectivity	Ethernet, I²C, SPI, UART/USART, USB OTG
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	53
Program Memory Size	64KB (64K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	32K x 8
Voltage - Supply (Vcc/Vdd)	2.3V ~ 3.6V
Data Converters	A/D 16x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	64-TQFP
Supplier Device Package	64-TQFP (10x10)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic32mx664f064ht-v-pt

TABLE 8: PIN NAMES FOR 100-PIN USB AND ETHERNET DEVICES (CONTINUED)

9.0 PREFETCH CACHE

Note: This data sheet summarizes the features of the PIC32MX5XX/6XX/7XX family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 4. "Prefetch Cache"** (DS60001119) in the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

Prefetch cache increases performance for applications executing out of the cacheable program Flash memory regions by implementing instruction caching, constant data caching and instruction prefetching.

9.1 Features

- 16 fully-associative lockable cache lines
- 16-byte cache lines
- Up to four cache lines allocated to data
- Two cache lines with address mask to hold repeated instructions
- Pseudo-LRU replacement policy
- All cache lines are software writable
- 16-byte parallel memory fetch
- Predictive instruction prefetch

A simplified block diagram of the Prefetch Cache module is illustrated in Figure 9-1.

FIGURE 9-1: PREFETCH CACHE MODULE BLOCK DIAGRAM

22.0 REAL-TIME CLOCK AND CALENDAR (RTCC)

Note:	This data sheet summarizes the features of the PIC32MX5XX/6XX/7XX family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 29. "Real-Time Clock and Calendar (RTCC)"** (DS60001125) in the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

The PIC32 RTCC module is intended for applications in which accurate time must be maintained for extended periods of time with minimal or no CPU intervention. Low-power optimization provides extended battery lifetime while keeping track of time. A simplified block diagram of the RTCC module is illustrated in Figure 22-1.

Key features of the RTCC module include:

- Time: hours, minutes and seconds
- 24-hour format (military time)
- Visibility of one-half second period
- Provides calendar: Weekday, date, month and year
- Alarm intervals are configurable for half of a second, one second, 10 seconds, one minute, 10 minutes, one hour, one day, one week, one month and one year
- Alarm repeat with decrementing counter
- Alarm with indefinite repeat: Chime
- Year range: 2000 to 2099
- Leap year correction
- BCD format for smaller firmware overhead
- Optimized for long-term battery operation
- Fractional second synchronization
- User calibration of the clock crystal frequency with auto-adjust
- Calibration range: ±0.66 seconds error per month
- Calibrates up to 260 ppm of crystal error
- Requirements: External 32.768 kHz clock crystal
- Alarm pulse or seconds clock output on RTCC pin

FIGURE 22-1: RTCC BLOCK DIAGRAM

27.0 COMPARATOR VOLTAGE REFERENCE (CVREF)

Note: This data sheet summarizes the features of the PIC32MX5XX/6XX/7XX family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 20. "Comparator Voltage Reference (CVREF)"** (DS60001109) in the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

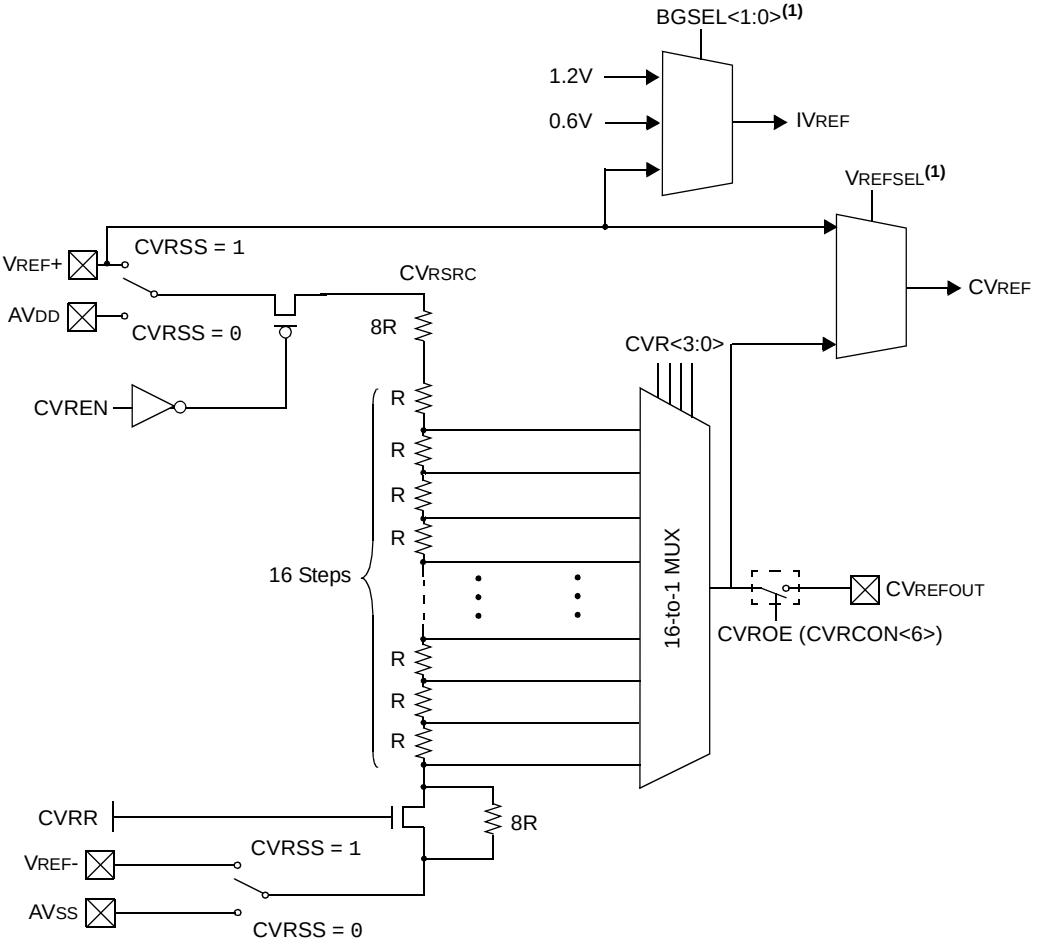
The CVREF module is a 16-tap, resistor ladder network that provides a selectable reference voltage. Although its primary purpose is to provide a reference for the analog comparators, it also may be used independently of them.

A block diagram of the module is illustrated in Figure 27-1. The resistor ladder is segmented to provide two ranges of voltage reference values and has a power-down function to conserve power when the reference is not being used. The module's supply reference can be provided from either device VDD/VSS or an external voltage reference. The CVREF output is available for the comparators and typically available for pin output.

Key features of the CVREF module include:

- High and low range selection
- Sixteen output levels available for each range
- Internally connected to comparators to conserve device pins
- Output can be connected to a pin

FIGURE 27-1: COMPARATOR VOLTAGE REFERENCE MODULE BLOCK DIAGRAM



Note 1: This bit is not available on PIC32MX575/675/695/775/795 devices. On these devices CVREF is generated by the Register network and IVREF is connected to 0.6V.

TABLE 32-5: DC CHARACTERISTICS: OPERATING CURRENT (IDD) (CONTINUED)

DC CHARACTERISTICS			Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated) Operating temperature -40°C ≤ TA ≤ +85°C for Industrial -40°C ≤ TA ≤ +105°C for V-Temp				
Param. No.	**Typical(3)**	**Max.**	**Units**	**Conditions**			
Operating Current (IDD)(1,2) for PIC32MX534/564/664/764 Family Devices							
DC20c	6	9	mA	Code executing from Flash	-40ºC, +25ºC, +85ºC	—	4 MHz
DC20d	7	10			+105ºC		
DC20e	2	—		Code executing from SRAM	—		
DC21b	19	32	mA	Code executing from Flash	—	—	25 MHz **(Note 4)**
DC21c	14	—		Code executing from SRAM			
DC22b	31	50	mA	Code executing from Flash	—	—	60 MHz **(Note 4)**
DC22c	29	—		Code executing from SRAM			
DC23c	39	65	mA	Code executing from Flash	-40ºC, +25ºC, +85ºC	—	80 MHz
DC23d	49	70			+105ºC		
DC23e	39	—		Code executing from SRAM	—		
DC25b	100	150	µA	—	+25°C	3.3V	LPRC (31 kHz) **(Note 4)**

Note 1: A device's IDD supply current is mainly a function of the operating voltage and frequency. Other factors, such as PBCLK (Peripheral Bus Clock) frequency, number of peripheral modules enabled, internal code execution pattern, execution from Program Flash memory vs. SRAM, I/O pin loading and switching rate, oscillator type, as well as temperature, can have an impact on the current consumption.

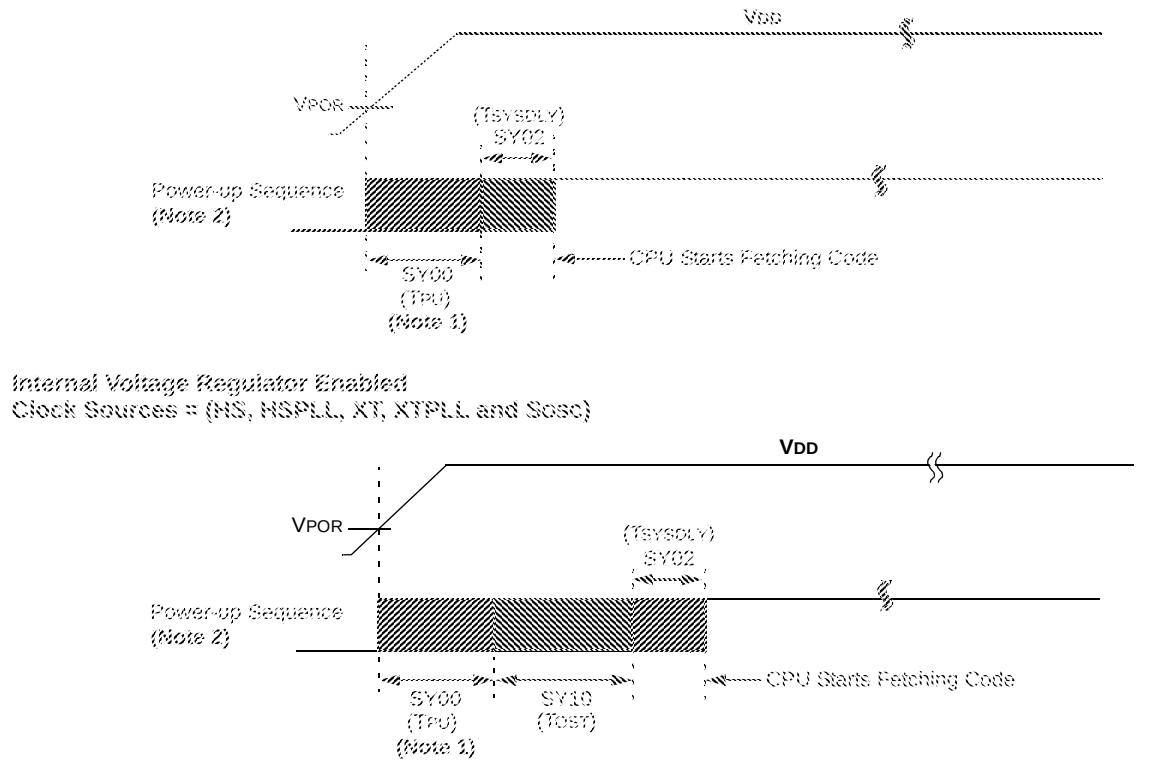
2: The test conditions for IDD measurements are as follows:

- Oscillator mode is EC (for 8 MHz and below) and EC+PLL (for above 8 MHz) with OSC1 driven by external square wave from rail-to-rail, (OSC1 input clock input over/undershoot < 100 mV required)
- OSC2/CLKO is configured as an I/O input pin
- USB PLL oscillator is disabled if the USB module is implemented, PBCLK divisor = 1:8
- CPU, program Flash, and SRAM data memory are operational, program Flash memory Wait states = 111, Program Cache and Prefetch are disabled and SRAM data memory Wait states = 1
- No peripheral modules are operating, (ON bit = 0)
- WDT, Clock Switching, Fail-Safe Clock Monitor, and Secondary Oscillator are disabled
- All I/O pins are configured as inputs and pulled to VSS
- $\overline{MCLR}$ = VDD
- CPU executing `while(1)` statement from Flash
- RTCC and JTAG are disabled

3: Data in "Typical" column is at 3.3V, 25°C at specified operating frequency unless otherwise stated. Parameters are for design guidance only and are not tested.

4: All parameters are characterized, but only those parameters listed for 4 MHz and 80 MHz are tested at 3.3V in manufacturing.

FIGURE 32-4: POWER-ON RESET TIMING CHARACTERISTICS



Note 1: The power-up period will be extended if the power-up sequence completes before the device exits from BOR ($V_{DD} < V_{DDMIN}$).

2: Includes interval voltage regulator stabilization delay.

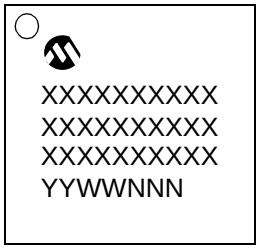
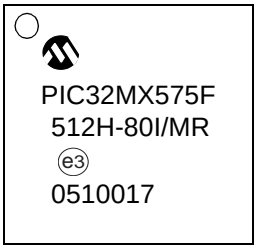
34.1 Package Marking Information (Continued)

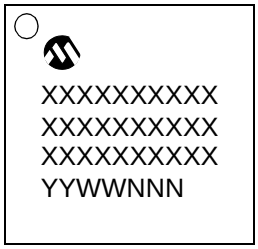
64-Lead QFN (9x9x0.9 mm)



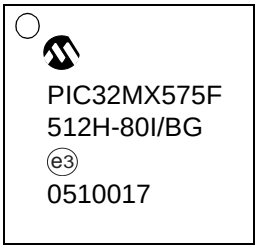
Example



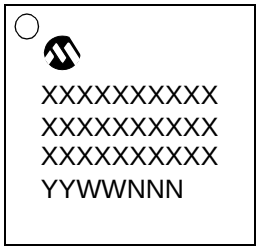
121-Lead TFBGA (10x10x1.1 mm)



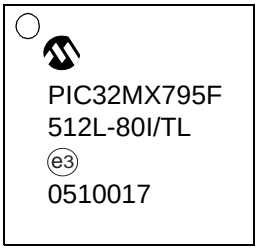
Example



124-Lead VTLA (9x9x0.9 mm)



Example



Legend:	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week ‘01’)
	NNN	Alphanumeric traceability code
		Pb-free JEDEC designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

Revision H (March 2013)

This revision includes the following global updates:

- Where applicable, control register tables have been added to the document
- All references to VCORE were removed
- All occurrences of XBGA have been updated to: TFBGA
- All occurrences of VUSB have been updated to: VUSB3V3

This revision also includes minor typographical and formatting changes throughout the data sheet text.

All other significant changes are referenced by their respective section in Table B-6.

TABLE B-6: MAJOR SECTION UPDATES

Section Name	Update Description
"32-bit Microcontrollers (up to 512 KB Flash and 128 KB SRAM) with Graphics Interface, USB, CAN, and Ethernet"	Updated Core features. Added the VTLA to the Packages table. Added Note 5 to the Feature tables (see Table 1, Table 2, and Table 3).
Section 2.0 "Guidelines for Getting Started with 32-bit MCUs"	The Recommended Minimum Connection was updated (see Figure 2-1).
Section 5.0 "Flash Program Memory"	A note regarding Flash page size and row size was added.
Section 8.0 "Oscillator Configuration"	The RP resistor was added and Note 1 was updated in the Oscillator Diagram (see Figure 8-1).
Section 31.0 "Electrical Characteristics"	Added Note 1 to Operating MIPS vs. Voltage (see Table 31-1). Added the VTLA package to Thermal Packaging Characteristics (see Table 31-3). Added Note 2 to DC Temperature and Voltage Specifications (see Table 31-4). Updated Note 2 in the Operating Current DC Characteristics (see Table 31-5). Updated Note 1 in the Idle Current DC Characteristics (see Table 31-6). Updated Note 1 in the Power-Down Current DC Characteristics (see Table 31-7). Updated the I/O Pin Output Specifications (see Table 31-9). Added Note 2 to the BOR Electrical Characteristics (see Table 31-10). Added Note 3 to the Comparator Specifications (see Table 31-13). Parameter D320 (VCORE) was removed (see Table 31-15). Updated the Minimum value for parameter OS50 (see Table 31-18). Parameter SY01 (TPWRT) was removed (see Table 31-22). Note 1 was added and the conditions for parameters ET3, ET4, ET7, and ET9 were updated in the Ethernet Module Specifications (see Table 31-35). Added Note 6 to the ADC Module Specifications (see Table 31-36). Added Note 3 to the 10-bit ADC Conversion Rate Parameter (see Table 31-37). Added Note 4 to the Analog-to-Digital Conversion Timing Requirements (see Table 31-38). The following figures were added: **Figure 31-19: "MDIO Sourced by the PIC32 Device"** **Figure 31-21: "Transmit Signal Timing Relationships at the MII"** **Figure 31-22: "Receive Signal Timing Relationships at the MII"**
Section 32.0 "DC and AC Device Characteristics Graphs"	This new chapter was added.
Section 33.0 "Packaging Information"	Added the 124-lead VTLA package information (see **Section 33.1 "Package Marking Information"** and **Section 33.2 "Package Details"**).
"Product Identification System"	Added the TL definition for VTLA packages.

© 2009-2016 Microchip Technology Inc.

Revision J (September 2016)

This revision includes typographical and formatting updates throughout the data sheet text. In addition, all SFR Register maps were moved from the Memory chapter to their respective peripheral chapters.

All other major updates are referenced by their respective section in Table B-7.

TABLE B-7: MAJOR SECTION UPDATES

Section Name	Update Description
"32-bit Microcontrollers (up to 512 KB Flash and 128 KB SRAM) with Graphics Interface, USB, CAN, and Ethernet"	Updated Communication Interfaces for LIN support to 2.1. Updated Qualification and Class B Support to AEC-Q100 REVH.
2.0 "Guidelines for Getting Started with 32-bit MCUs"	The Recommended Minimum Connection diagram was updated (see Figure 2-1). The Example of $\overline{\text{MCLR}}$ Pin Connections diagram was updated (see Figure 2-2). **2.11 "EMI/EMC/EFT (IEC 61000-4-4 and IEC 61000-4-2) Suppression Considerations"** was added.
4.0 "Memory Organization"	The SFR Memory Map was added (see Table 4-1).
7.0 "Interrupt Controller"	The UART interrupt sources were updated in the Interrupt IRQ, Vector, and Bit location table (see Table 7-1).
8.0 "Oscillator Configuration"	Updated the bit value definitions for the TUN<5:0> bits in the OCSTUN register (see Register 8-2).
15.0 "Watchdog Timer (WDT)"	The content in this chapter was relocated from the Special Features chapter to its own chapter.
18.0 "Serial Peripheral Interface (SPI)"	The register map tables were combined (see Table 18-1).
19.0 "Inter-Integrated Circuit (I^2C)"	The register map tables were combined (see Table 19-1). The PMADDR register was updated (see Register 21-3).
21.0 "Parallel Master Port (PMP)"	The bit value definitions for the ADRMUX<1:0> and CSF<1:0> bits in the PMCON register were updated (see Register 21-1).
29.0 "Special Features"	Removed the duplicate bit value definition for '010' in the DEVCFG2 register (see Register 29-3). Note 1 was added to the Programming, Debugging, and Trace Ports block diagram (see Figure 29-2). The DDPCON register was relocated (see Register 29-6). The Device ID, Revision, and Configuration Summary was updated (see Table 29-2).
