

Welcome to [E-XFL.COM](#)

What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "[Embedded - Microcontrollers](#)"

Details

Product Status	Active
Core Processor	MIPS32® M4K™
Core Size	32-Bit Single-Core
Speed	80MHz
Connectivity	Ethernet, I ² C, SPI, UART/USART, USB OTG
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	85
Program Memory Size	128KB (128K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	32K x 8
Voltage - Supply (Vcc/Vdd)	2.3V ~ 3.6V
Data Converters	A/D 16x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	100-TQFP
Supplier Device Package	100-TQFP (12x12)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic32mx664f128l-i-pt

PIC32MX5XX/6XX/7XX

FIGURE 19-1: I²C BLOCK DIAGRAM

PIC32MX5XX/6XX/7XX

REGISTER 23-1: AD1CON1: ADC CONTROL REGISTER 1 (CONTINUED)

- bit 4 **CLRASAM:** Stop Conversion Sequence bit (when the first ADC interrupt is generated)
1 = Stop conversions when the first ADC interrupt is generated. Hardware clears the ASAM bit when the ADC interrupt is generated.
0 = Normal operation, buffer contents will be overwritten by the next conversion sequence
- bit 3 **Unimplemented:** Read as '0'
- bit 2 **ASAM:** ADC Sample Auto-Start bit
1 = Sampling begins immediately after last conversion completes; SAMP bit is automatically set
0 = Sampling begins when SAMP bit is set
- bit 1 **SAMP:** ADC Sample Enable bit⁽²⁾
1 = The ADC S&H circuit is sampling
0 = The ADC S&H circuit is holding
When ASAM = 0, writing '1' to this bit starts sampling.
When SSRC<2:0> = 000, writing '0' to this bit will end sampling and start conversion.
- bit 0 **DONE:** Analog-to-Digital Conversion Status bit⁽³⁾
Clearing this bit will not affect any operation in progress.
1 = Analog-to-digital conversion is done
0 = Analog-to-digital conversion is not done or has not started

- Note 1:** When using the 1:1 PBCLK divisor, the user's software should not read/write the peripheral's SFRs in the SYSCLK cycle immediately following the instruction that clears the module's ON bit.
- 2:** If ASAM = 0, software can write a '1' to start sampling. This bit is automatically set by hardware if ASAM = 1. If SSRC<2:0> = 000, software can write a '0' to end sampling and start conversion. If SSRC<2:0> ≠ '000', this bit is automatically cleared by hardware to end sampling and start conversion.
- 3:** This bit is automatically set by hardware when analog-to-digital conversion is complete. Software can write a '0' to clear this bit (a write of '1' is not allowed). Clearing this bit does not affect any operation already in progress. This bit is automatically cleared by hardware at the start of a new conversion.

Legend:

R = Readable bit W = Writable bit U = Unimplemented bit, read as '0'
 -n = Value at POR '1' = Bit is set '0' = Bit is cleared x = Bit is unknown

- bit 31-0 **FIFOIP<31:0>:** FIFO Interrupt Pending bits
- 1 = One or more enabled FIFO interrupts are pending
- 0 = No FIFO interrupts are pending

REGISTER 24-21: C*i*FIFOINT*n*: CAN FIFO INTERRUPT REGISTER 'n' (n = 0 THROUGH 31)

- bit 9 **TXHALFIF**: FIFO Transmit FIFO Half Empty Interrupt Flag bit⁽¹⁾
 TXEN = 1: (FIFO configured as a transmit buffer)
 1 = FIFO is $\leq$ half full
 0 = FIFO is $>$ half full
 TXEN = 0: (FIFO configured as a receive buffer)
 Unused, reads '0'
- bit 8 **TXEMPTYIF**: Transmit FIFO Empty Interrupt Flag bit⁽¹⁾
 TXEN = 1: (FIFO configured as a transmit buffer)
 1 = FIFO is empty
 0 = FIFO is not empty, at least 1 message queued to be transmitted
 TXEN = 0: (FIFO configured as a receive buffer)
 Unused, reads '0'
- bit 7-4 **Unimplemented**: Read as '0'
- bit 3 **RXOVFLIF**: Receive FIFO Overflow Interrupt Flag bit
 TXEN = 1: (FIFO configured as a transmit buffer)
 Unused, reads '0'
 TXEN = 0: (FIFO configured as a receive buffer)
 1 = Overflow event has occurred
 0 = No overflow event occurred
- bit 2 **RXFULLIF**: Receive FIFO Full Interrupt Flag bit⁽¹⁾
 TXEN = 1: (FIFO configured as a transmit buffer)
 Unused, reads '0'
 TXEN = 0: (FIFO configured as a receive buffer)
 1 = FIFO is full
 0 = FIFO is not full
- bit 1 **RXHALFIF**: Receive FIFO Half Full Interrupt Flag bit⁽¹⁾
 TXEN = 1: (FIFO configured as a transmit buffer)
 Unused, reads '0'
 TXEN = 0: (FIFO configured as a receive buffer)
 1 = FIFO is $\geq$ half full
 0 = FIFO is $<$ half full
- bit 0 **RXEMPTYIF**: Receive Buffer Not Empty Interrupt Flag bit⁽¹⁾
 TXEN = 1: (FIFO configured as a transmit buffer)
 Unused, reads '0'
 TXEN = 0: (FIFO configured as a receive buffer)
 1 = FIFO is not empty, has at least 1 message
 0 = FIFO is empty

Note 1: This bit is read-only and reflects the status of the FIFO.

PIC32MX5XX/6XX/7XX

Table 25-1, Table 25-2, Table 25-3 and Table 25-4 show four interfaces and the associated pins that can be used with the Ethernet Controller.

TABLE 25-1: MII MODE DEFAULT INTERFACE SIGNALS (FMIIEN = 1, FETHIO = 1)

Pin Name	Description
EMDC	Management Clock

Legend:

R = Readable bit

W = Writable bit

U = Unimplemented bit, read as '0'

-n = Value at POR

'1' = Bit is set

'0' = Bit is cleared

x = Bit is unknown

bit 31-24 **Unimplemented:** Read as '0'

bit 23-16 **BUFCNT<7:0>:** Packet Buffer Count bits

Number of packet buffers received in memory. Once a packet has been successfully received, this register is incremented by hardware based on the number of descriptors used by the packet. Software decrements the counter (by writing to the BUFCDEC bit (ETHCON1<0>)) for each descriptor used) after a packet has been read out of the buffer. The register does not roll over (0xFF to 0x00) when hardware tries to increment the register and the register is already at 0xFF. Conversely, the register does not roll under (0x00 to 0xFF) when software tries to decrement the register and the register is already at 0x0000. When software attempts to decrement the counter at the same time that the hardware attempts to increment the counter, the counter value will remain unchanged.

When this register value reaches 0xFF, the RX logic will halt (only if automatic Flow Control is enabled) awaiting software to write the BUFCDEC bit in order to decrement the register below 0xFF.

If automatic Flow Control is disabled, the RXDMA will continue processing and the BUFCNT will saturate at a value of 0xFF.

When this register is non-zero, the PKTPEND status bit will be set and an interrupt may be generated, depending on the value of the ETHIEN bit <PKTPENDIE> register.

When the ETHRXST register is written, the BUFCNT counter is automatically cleared to 0x00.

Note: BUFCNT will not be cleared when ON is set to '0'. This enables software to continue to utilize and decrement this count.

bit 15-8 **Unimplemented:** Read as '0'

bit 7 **ETHBUSY:** Ethernet Module busy bit⁽¹⁾

1 = Ethernet logic has been turned on (ON (ETHCON1<15>) = 1) or is completing a transaction

0 = Ethernet logic is idle

This bit indicates that the module has been turned on or is completing a transaction after being turned off.

bit 6 **TXBUSY:** Transmit Busy bit⁽²⁾

1 = TX logic is receiving data

0 = TX logic is idle

This bit indicates that a packet is currently being transmitted. A change in this status bit is not necessarily reflected by the TXDONE interrupt, as TX packets may be aborted or rejected by the MAC.

Note 1: This bit will be *set* when the ON bit (ETHCON1<15>) = 1.

2: This bit will be *cleared* when the ON bit (ETHCON1<15>) = 0.

26.1 Control Registers

TABLE 26-1: COMPARATOR REGISTER MAP

Virtual Address (BF80_#)	Register Name ⁽¹⁾	Bit Range	Bits																All Resets
			31/15	30/14	29/13	28/12	27/11	26/10	25/9	24/8	23/7	22/6	21/5	20/4	19/3	18/2	17/1	16/0

		15:0	—	—	SIDL	—	—	—	—	—	—	—	—	—	—	—	C2OUT	C1OUT	0000

Legend: x = unknown value on Reset; — = unimplemented, read as '0'. Reset values are shown in hexadecimal.

Note 1: All registers in this table have corresponding CLR, SET and INV registers at their virtual addresses, plus offsets of 0x4, 0x8 and 0xC, respectively. See **Section 12.1.1 “CLR, SET and INV Registers”** for more information.

31.0 DEVELOPMENT SUPPORT

The PIC® microcontrollers (MCU) and dsPIC® digital signal controllers (DSC) are supported with a full range of software and hardware development tools:

- Integrated Development Environment
 - MPLAB® X IDE Software
- Compilers/Assemblers/Linkers
 - MPLAB XC Compiler
 - MPASM™ Assembler
 - MPLINK™ Object Linker/
MPLIB™ Object Librarian
 - MPLAB Assembler/Linker/Librarian for
Various Device Families
- Simulators
 - MPLAB X SIM Software Simulator
- Emulators
 - MPLAB REAL ICE™ In-Circuit Emulator
- In-Circuit Debuggers/Programmers
 - MPLAB ICD 3
 - PICKit™ 3
- Device Programmers
 - MPLAB PM3 Device Programmer
- Low-Cost Demonstration/Development Boards,
Evaluation Kits and Starter Kits
- Third-party development tools

31.1 MPLAB X Integrated Development Environment Software

The MPLAB X IDE is a single, unified graphical user interface for Microchip and third-party software, and hardware development tool that runs on Windows®, Linux and Mac OS® X. Based on the NetBeans IDE, MPLAB X IDE is an entirely new IDE with a host of free software components and plug-ins for high-performance application development and debugging. Moving between tools and upgrading from software simulators to hardware debugging and programming tools is simple with the seamless user interface.

With complete project management, visual call graphs, a configurable watch window and a feature-rich editor that includes code completion and context menus, MPLAB X IDE is flexible and friendly enough for new users. With the ability to support multiple tools on multiple projects with simultaneous debugging, MPLAB X IDE is also suitable for the needs of experienced users.

Feature-Rich Editor:

- Color syntax highlighting
- Smart code completion makes suggestions and provides hints as you type
- Automatic code formatting based on user-defined rules
- Live parsing

User-Friendly, Customizable Interface:

- Fully customizable interface: toolbars, toolbar buttons, windows, window placement, etc.
- Call graph window

Project-Based Workspaces:

- Multiple projects
- Multiple tools
- Multiple configurations
- Simultaneous debugging sessions

File History and Bug Tracking:

- Local file history feature
- Built-in support for Bugzilla issue tracker

31.6 MPLAB X SIM Software Simulator

The MPLAB X SIM Software Simulator allows code development in a PC-hosted environment by simulating the PIC MCUs and dsPIC DSCs on an instruction level. On any given instruction, the data areas can be examined or modified and stimuli can be applied from a comprehensive stimulus controller. Registers can be logged to files for further run-time analysis. The trace buffer and logic analyzer display extend the power of the simulator to record and track program execution, actions on I/O, most peripherals and internal registers.

The MPLAB X SIM Software Simulator fully supports symbolic debugging using the MPLAB XC Compilers, and the MPASM and MPLAB Assemblers. The software simulator offers the flexibility to develop and debug code outside of the hardware laboratory environment, making it an excellent, economical software development tool.

31.7 MPLAB REAL ICE In-Circuit Emulator System

The MPLAB REAL ICE In-Circuit Emulator System is Microchip's next generation high-speed emulator for Microchip Flash DSC and MCU devices. It debugs and programs all 8, 16 and 32-bit MCU, and DSC devices with the easy-to-use, powerful graphical user interface of the MPLAB X IDE.

The emulator is connected to the design engineer's PC using a high-speed USB 2.0 interface and is connected to the target with either a connector compatible with in-circuit debugger systems (RJ-11) or with the new high-speed, noise tolerant, Low-Voltage Differential Signal (LVDS) interconnection (CAT5).

The emulator is field upgradable through future firmware downloads in MPLAB X IDE. MPLAB REAL ICE offers significant advantages over competitive emulators including full-speed emulation, run-time variable watches, trace analysis, complex breakpoints, logic probes, a ruggedized probe interface and long (up to three meters) interconnection cables.

31.8 MPLAB ICD 3 In-Circuit Debugger System

The MPLAB ICD 3 In-Circuit Debugger System is Microchip's most cost-effective, high-speed hardware debugger/programmer for Microchip Flash DSC and MCU devices. It debugs and programs PIC Flash microcontrollers and dsPIC DSCs with the powerful, yet easy-to-use graphical user interface of the MPLAB IDE.

The MPLAB ICD 3 In-Circuit Debugger probe is connected to the design engineer's PC using a high-speed USB 2.0 interface and is connected to the target with a connector compatible with the MPLAB ICD 2 or MPLAB REAL ICE systems (RJ-11). MPLAB ICD 3 supports all MPLAB ICD 2 headers.

31.9 PICkit 3 In-Circuit Debugger/Programmer

The MPLAB PICkit 3 allows debugging and programming of PIC and dsPIC Flash microcontrollers at a most affordable price point using the powerful graphical user interface of the MPLAB IDE. The MPLAB PICkit 3 is connected to the design engineer's PC using a full-speed USB interface and can be connected to the target via a Microchip debug (RJ-11) connector (compatible with MPLAB ICD 3 and MPLAB REAL ICE). The connector uses two device I/O pins and the Reset line to implement in-circuit debugging and In-Circuit Serial Programming™ (ICSP™).

31.10 MPLAB PM3 Device Programmer

The MPLAB PM3 Device Programmer is a universal, CE compliant device programmer with programmable voltage verification at VDDMIN and VDDMAX for maximum reliability. It features a large LCD display (128 x 64) for menus and error messages, and a modular, detachable socket assembly to support various package types. The ICSP cable assembly is included as a standard item. In Stand-Alone mode, the MPLAB PM3 Device Programmer can read, verify and program PIC devices without a PC connection. It can also set code protection in this mode. The MPLAB PM3 connects to the host PC via an RS-232 or USB cable. The MPLAB PM3 has high-speed communications and optimized algorithms for quick programming of large memory devices, and incorporates an MMC card for file storage and data applications.

PIC32MX5XX/6XX/7XX

TABLE 32-8: DC CHARACTERISTICS: I/O PIN INPUT SPECIFICATIONS

DC CHARACTERISTICS			Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated) Operating temperature -40°C ≤ TA ≤ +85°C for Industrial -40°C ≤ TA ≤ +105°C for V-Temp				
Param. No.	Symbol	Characteristics	Min.	Typical ⁽¹⁾	Max.	Units	Conditions
DI10	V _{IL}	Input Low Voltage I/O Pins: with TTL Buffer with Schmitt Trigger Buffer	V _{SS}	—	0.15 V _{DD}	V	(Note 4) (Note 4) SMBus disabled (Note 4) SMBus enabled (Note 4)
DI15		$\overline{\text{MCLR}}^{(2)}$	V _{SS}	—	0.2 V _{DD}	V	
DI16		OSC1 (XT mode)	V _{SS}	—	0.2 V _{DD}	V	
DI17		OSC1 (HS mode)	V _{SS}	—	0.2 V _{DD}	V	
DI18		SDAx, SCLx	V _{SS}	—	0.3 V _{DD}	V	
DI19		SDAx, SCLx	V _{SS}	—	0.8	V	
DI20	V _{IH}	Input High Voltage I/O Pins not 5V-tolerant ⁽⁵⁾	0.65 V _{DD}	—	V _{DD}	V	(Note 4,6) (Note 4,6) SMBus disabled (Note 4,6) SMBus enabled, 2.3V ≤ V _{PIN} ≤ 5.5 (Note 4,6)
		I/O Pins 5V-tolerant with PMP ⁽⁵⁾	0.25 V _{DD} + 0.8V	—	5.5	V	
DI28		I/O Pins 5V-tolerant ⁽⁵⁾ SDAx, SCLx	0.65 V _{DD} 0.65 V _{DD}	—	5.5 5.5	V V	
DI29		SDAx, SCLx	2.1	—	5.5	V	
DI30	ICNPU	Change Notification Pull-up Current	—	—	-50	μA	V _{DD} = 3.3V, V _{PIN} = V _{SS} (Note 3,6)
DI31	ICNPD	Change Notification Pull-down Current⁽⁴⁾	—	50	—	μA	V _{DD} = 3.3V, V _{PIN} = V _{DD}

- Note 1:** Data in “Typical” column is at 3.3V, 25°C unless otherwise stated. Parameters are for design guidance only and are not tested.
- 2:** The leakage current on the $\overline{\text{MCLR}}$ pin is strongly dependent on the applied voltage level. The specified levels represent normal operating conditions. Higher leakage current may be measured at different input voltages.
- 3:** Negative current is defined as current sourced by the pin.
- 4:** This parameter is characterized, but not tested in manufacturing.
- 5:** See the “**Device Pin Tables**” section for the 5V-tolerant pins.
- 6:** The V_{IH} specification is only in relation to externally applied inputs and not with respect to the user-selectable pull-ups. Externally applied high impedance or open drain input signals utilizing the PIC32 internal pull-ups are guaranteed to be recognized as a logic “high” internally to the PIC32 device, provided that the external load does not exceed the maximum value of ICNPU.
- 7:** V_{IL} source < (V_{SS} - 0.3). Characterized but not tested.
- 8:** V_{IH} source > (V_{DD} + 0.3) for non-5V tolerant pins only.
- 9:** Digital 5V tolerant pins do not have an internal high side diode to V_{DD}, and therefore, cannot tolerate any “positive” input injection current.
- 10:** Injection currents > |0| can affect the ADC results by approximately 4 to 6 counts (i.e., V_{IH} Source > (V_{DD} + 0.3) or V_{IL} source < (V_{SS} - 0.3)).
- 11:** Any number and/or combination of I/O pins not excluded under I_{ICL} or I_{ICH} conditions are permitted provided the “absolute instantaneous” sum of the input injection currents from all pins do not exceed the specified limit. If **Note 7**, I_{ICL} = (((V_{SS} - 0.3) - V_{IL} source) / R_s). If **Note 8**, I_{ICH} = ((I_{ICH} source - (V_{DD} + 0.3)) / R_S). R_S = Resistance between input source voltage and device pin. If (V_{SS} - 0.3) ≤ V_{SOURCE} ≤ (V_{DD} + 0.3), injection current = 0.

PIC32MX5XX/6XX/7XX

100-Lead Plastic Thin Quad Flatpack (PT) – 12x12x1 mm Body, 2.00 mm [TQFP]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packages>

Units		MILLIMETERS		
Dimension Limits		MIN	NOM	MAX
Number of Leads	N	100		
Lead Pitch	e	0.40 BSC		
Overall Height	A	–	–	1.20
Molded Package Thickness	A2	0.95	1.00	1.05
Standoff	A1	0.05	–	0.15
Foot Length	L	0.45	0.60	0.75
Footprint	L1	1.00 REF		
Foot Angle	ϕ	0°	3.5°	7°
Overall Width	E	14.00 BSC		
Overall Length	D	14.00 BSC		
Molded Package Width	E1	12.00 BSC		
Molded Package Length	D1	12.00 BSC		
Lead Thickness	c	0.09	–	0.20
Lead Width	b	0.13	0.18	0.23
Mold Draft Angle Top	α	11°	12°	13°
Mold Draft Angle Bottom	β	11°	12°	13°

Notes:

- Pin 1 visual index feature may vary, but must be located within the hatched area.
- Chamfers at corners are optional; size may vary.
- Dimensions D1 and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.25 mm per side.
- Dimensioning and tolerancing per ASME Y14.5M.

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

REF: Reference Dimension, usually without tolerance, for information purposes only.

Microchip Technology Drawing C04-100B

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://microchip.com/support>
