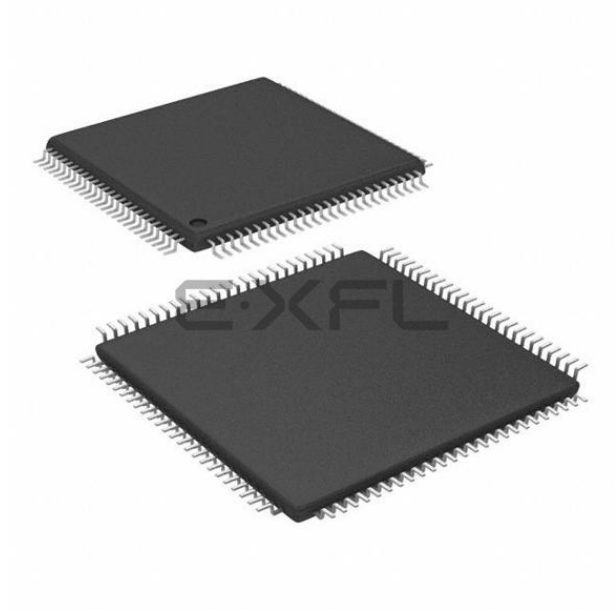
Microchip Technology - PIC32MX675F512L-80V/PF Datasheet



Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	MIPS32® M4K™
Core Size	32-Bit Single-Core
Speed	80MHz
Connectivity	Ethernet, I²C, SPI, UART/USART, USB OTG
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	85
Program Memory Size	512KB (512K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	64K x 8
Voltage - Supply (Vcc/Vdd)	2.3V ~ 3.6V
Data Converters	A/D 16x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	100-TQFP
Supplier Device Package	100-TQFP (14x14)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic32mx675f512l-80v-pf

3.3 Power Management

The MIPS32 M4K Processor core offers a number of power management features, including low-power design, active power management and power-down modes of operation. The core is a static design that supports slowing or halting the clocks, which reduces system power consumption during idle periods.

3.3.1 INSTRUCTION-CONTROLLED POWER MANAGEMENT

The mechanism for invoking Power-Down mode is through execution of the WAIT instruction. For more information on power management, see **Section 28.0 "Power-Saving Features"**.

3.3.2 LOCAL CLOCK GATING

The majority of the power consumed by the PIC32MX-5XX/6XX/7XX family core is in the clock tree and clocking registers. The PIC32 family uses extensive use of local gated clocks to reduce this dynamic power consumption.

3.4 EJTAG Debug Support

The MIPS32 M4K Processor core provides for an Enhanced JTAG (EJTAG) interface for use in the software debug of application and kernel code. In addition to standard User mode and Kernel modes of operation, the MIPS M4K core provides a Debug mode that is entered after a debug exception (derived from a hardware breakpoint, single-step exception, etc.) is taken and continues until a Debug Exception Return (DERET) instruction is executed. During this time, the processor executes the debug exception handler routine.

The EJTAG interface operates through the Test Access Port (TAP), a serial communication port used for transferring test data in and out of the MIPS32 M4K processor core. In addition to the standard JTAG instructions, special instructions defined in the EJTAG specification define which registers are selected and how they are used.

13.0 TIMER1

Note: This data sheet summarizes the features of the PIC32MX5XX/6XX/7XX family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 14. "Timers"** (DS60001105) in the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

This family of PIC32 devices features one synchronous/asynchronous 16-bit timer that can operate as a free-running interval timer for various timing applications and counting external events. This timer can also be used with the low-power Secondary Oscillator (SOSC) for Real-Time Clock (RTC) applications. The following modes are supported:

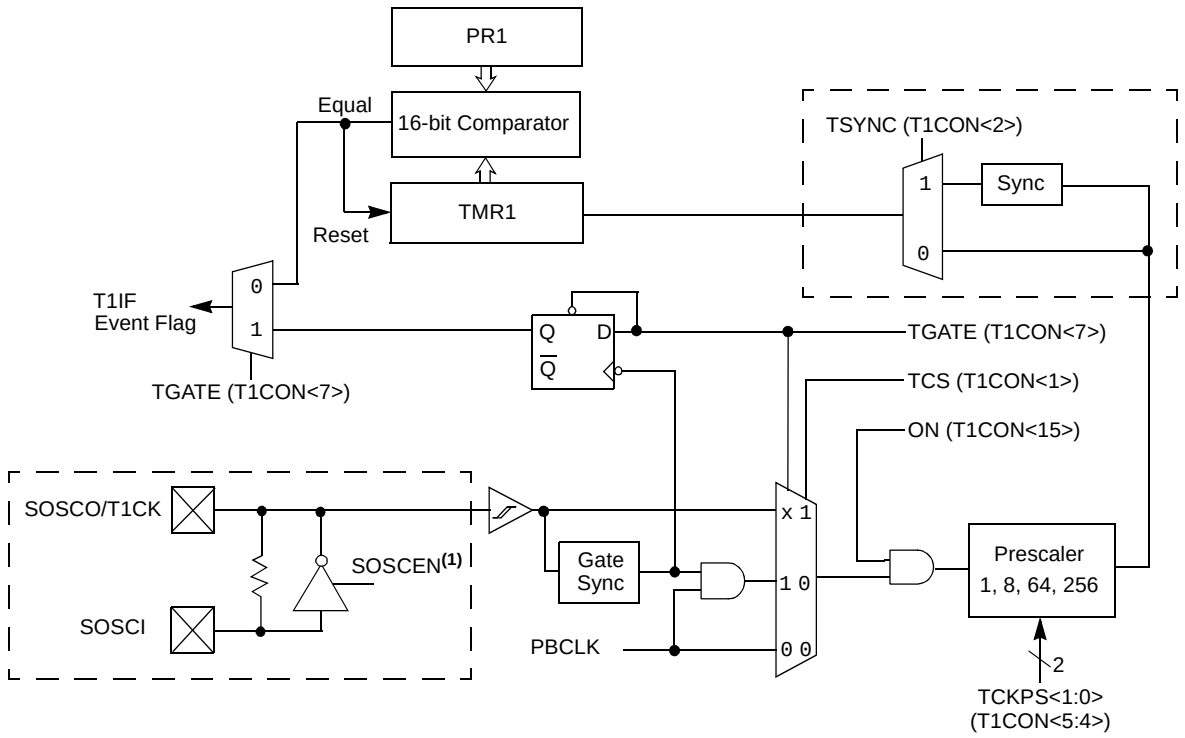
- Synchronous Internal Timer
- Synchronous Internal Gated Timer
- Synchronous External Timer
- Asynchronous External Timer

13.1 Additional Supported Features

- Selectable clock prescaler
- Timer operation during Idle and Sleep mode
- Fast bit manipulation using CLR, SET and INV registers
- Asynchronous mode can be used with the SOSC to function as a Real-Time Clock (RTC)

A simplified block diagram of the Timer1 module is illustrated in Figure 13-1.

FIGURE 13-1: TIMER1 BLOCK DIAGRAM



Note 1: The default state of the SOSCEN (OSCCON<1>) during a device Reset is controlled by the FSOSCEN bit in Configuration Word, DEVCFG1.

15.0 WATCHDOG TIMER (WDT)

Note: This data sheet summarizes the features of the PIC32MX5XX/6XX/7XX family of devices. However, it is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 8. "Watchdog Timer and Power-up Timer"** (DS60001114) in the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

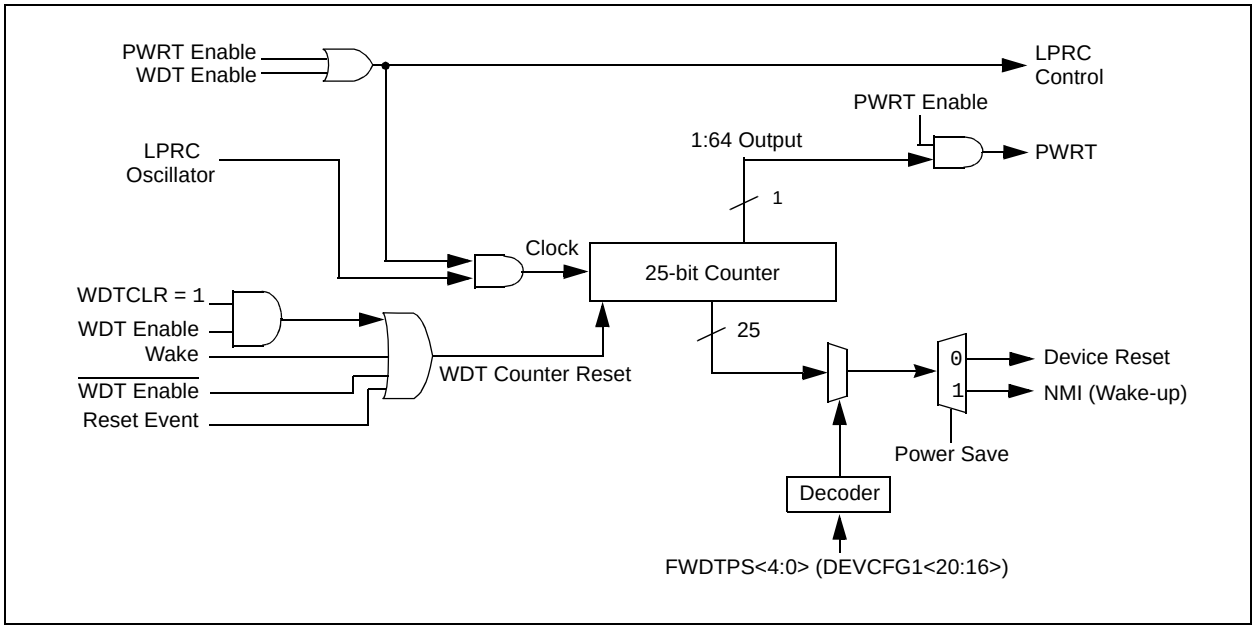
This section describes the operation of the WDT and Power-up Timer of the PIC32MX5XX/6XX/7XX.

The WDT, when enabled, operates from the internal Low-Power Oscillator (LPRC) clock source and can be used to detect system software malfunctions by resetting the device if the WDT is not cleared periodically in software. Various WDT time-out periods can be selected using the WDT postscaler. The WDT can also be used to wake the device from Sleep or Idle mode.

The following are key features of the WDT module:

- Configuration or software controlled
- User-configurable time-out period
- Can wake the device from Sleep or Idle mode

FIGURE 15-1: WATCHDOG TIMER AND POWER-UP TIMER BLOCK DIAGRAM



REGISTER 23-1: AD1CON1: ADC CONTROL REGISTER 1 (CONTINUED)

bit 4 **CLRASAM:** Stop Conversion Sequence bit (when the first ADC interrupt is generated)
1 = Stop conversions when the first ADC interrupt is generated. Hardware clears the ASAM bit when the ADC interrupt is generated.
0 = Normal operation, buffer contents will be overwritten by the next conversion sequence

bit 3 **Unimplemented:** Read as '0'

bit 2 **ASAM:** ADC Sample Auto-Start bit
1 = Sampling begins immediately after last conversion completes; SAMP bit is automatically set
0 = Sampling begins when SAMP bit is set

bit 1 **SAMP:** ADC Sample Enable bit(2)
1 = The ADC S&H circuit is sampling
0 = The ADC S&H circuit is holding
When ASAM = 0, writing '1' to this bit starts sampling.
When SSRC<2:0> = 000, writing '0' to this bit will end sampling and start conversion.

bit 0 **DONE:** Analog-to-Digital Conversion Status bit(3)
Clearing this bit will not affect any operation in progress.
1 = Analog-to-digital conversion is done
0 = Analog-to-digital conversion is not done or has not started

Note 1: When using the 1:1 PBCLK divisor, the user's software should not read/write the peripheral's SFRs in the SYSCLK cycle immediately following the instruction that clears the module's ON bit.

2: If ASAM = 0, software can write a '1' to start sampling. This bit is automatically set by hardware if ASAM = 1. If SSRC<2:0> = 000, software can write a '0' to end sampling and start conversion. If SSRC<2:0> ≠ '000', this bit is automatically cleared by hardware to end sampling and start conversion.

3: This bit is automatically set by hardware when analog-to-digital conversion is complete. Software can write a '0' to clear this bit (a write of '1' is not allowed). Clearing this bit does not affect any operation already in progress. This bit is automatically cleared by hardware at the start of a new conversion.

01 = Length is 2 x TQ
00 = Length is 1 x TQ

bit 5-0 **BRP<5:0>:** Baud Rate Prescaler bits
111111 = TQ = (2 x 64)/FSYS
111110 = TQ = (2 x 63)/FSYS
•
•
•
000001 = TQ = (2 x 2)/FSYS
000000 = TQ = (2 x 1)/FSYS

Note 1: SEG2PH ≤ SEG1PH. If SEG2PHTS is clear, SEG2PH will be set automatically.
2: 3 Time bit sampling is not allowed for BRP < 2.
3: SJW ≤ SEG2PH.
4: The Time Quanta per bit must be greater than 7 (that is, TQBIT > 7).

Note: This register can only be modified when the CAN module is in Configuration mode (OPMOD<2:0> (CiCON<23:21>) = 100).

	—	—	—	—	—	—	—	—
23:16	U-0	U-0	U-0	U-0	U-0	U-0	U-0	U-0
	—	—	—	—	—	—	—	—
15:8	U-0	U-0	U-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-1
	—	—	—	PHYADDR<4:0>				
7:0	U-0	U-0	U-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
	—	—	—	REGADDR<4:0>				

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-13 **Unimplemented:** Read as '0'

bit 12-8 **PHYADDR<4:0>:** MII Management PHY Address bits

This field represents the 5-bit PHY Address field of Management cycles. Up to 31 PHYs can be addressed (0 is reserved).

bit 7-5 **Unimplemented:** Read as '0'

bit 4-0 **REGADDR<4:0>:** MII Management Register Address bits

This field represents the 5-bit Register Address field of Management cycles. Up to 32 registers can be accessed.

Note: Both 16-bit and 32-bit accesses are allowed to these registers (including the SET, CLR and INV registers). 8-bit accesses are not allowed and are ignored by the hardware.

TABLE 32-13: COMPARATOR SPECIFICATIONS

DC CHARACTERISTICS			Standard Operating Conditions (see Note 3): 2.3V to 3.6V (unless otherwise stated) Operating temperature -40°C ≤ TA ≤ +85°C for Industrial -40°C ≤ TA ≤ +105°C for V-Temp				
Param. No.	**Symbol**	**Characteristics**	**Min.**	**Typical**	**Max.**	**Units**	**Comments**
D300	VIOFF	Input Offset Voltage	—	±7.5	±25	mV	AVDD = VDD, AVSS = VSS
D301	VICM	Input Common Mode Voltage	0	—	VDD	V	AVDD = VDD, AVSS = VSS **(Note 2)**
D302	CMRR	Common Mode Rejection Ratio	55	—	—	dB	Max VICM = (VDD - 1)V **(Note 2)**
D303	TRESP	Response Time	—	150	400	ns	AVDD = VDD, AVSS = VSS **(Notes 1, 2)**
D304	ON2OV	Comparator Enabled to Output Valid	—	—	10	µs	Comparator module is configured before setting the comparator ON bit **(Note 2)**
D305	IVREF	Internal Voltage Reference	0.57	0.6	0.63	V	For devices without BGSEL<1:0>
			1.14	1.2	1.26	V	BGSEL<1:0> = 00
			0.57	0.6	0.63	V	BGSEL<1:0> = 01

Note 1: Response time measured with one comparator input at (VDD – 1.5)/2, while the other input transitions from VSS to VDD.

2: These parameters are characterized but not tested.

3: The Comparator module is functional at VBORMIN < VDD < VDDMIN, but with degraded performance. Unless otherwise stated, module functionality is tested, but not characterized.

TABLE 32-34: CAN MODULE I/O TIMING REQUIREMENTS

AC CHARACTERISTICS			Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated) Operating temperature -40°C ≤ TA ≤ +85°C for Industrial -40°C ≤ TA ≤ +105°C for V-Temp				
Param No.	**Symbol**	**Characteristic(1)**	**Min**	**Typ(2)**	**Max**	**Units**	**Conditions**
CA10	TioF	Port Output Fall Time	—	—	—	ns	See parameter DO32
CA11	TioR	Port Output Rise Time	—	—	—	ns	See parameter DO31
CA20	Tcwf	Pulse Width to Trigger CAN Wake-up Filter	700	—	—	ns	—

Note 1: These parameters are characterized but not tested in manufacturing.

2: Data in "Typ" column is at 3.3V, 25°C unless otherwise stated. Parameters are for design guidance only and are not tested.

34.2 Package Details

The following sections give the technical details of the packages.

64-Lead Plastic Thin Quad Flatpack (PT)-10x10x1 mm Body, 2.00 mm Footprint [TQFP]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging

Revision H (March 2013)

This revision includes the following global updates:

- Where applicable, control register tables have been added to the document
- All references to VCORE were removed
- All occurrences of XBGA have been updated to: TFBGA
- All occurrences of VUSB have been updated to: VUSB3V3

This revision also includes minor typographical and formatting changes throughout the data sheet text.

All other significant changes are referenced by their respective section in Table B-6.

TABLE B-6: MAJOR SECTION UPDATES

Section Name	Update Description
"32-bit Microcontrollers (up to 512 KB Flash and 128 KB SRAM) with Graphics Interface, USB, CAN, and Ethernet"	Updated Core features. Added the VTLA to the Packages table. Added Note 5 to the Feature tables (see Table 1, Table 2, and Table 3).
Section 2.0 "Guidelines for Getting Started with 32-bit MCUs"	The Recommended Minimum Connection was updated (see Figure 2-1).
Section 5.0 "Flash Program Memory"	A note regarding Flash page size and row size was added.
Section 8.0 "Oscillator Configuration"	The RP resistor was added and Note 1 was updated in the Oscillator Diagram (see Figure 8-1).
Section 31.0 "Electrical Characteristics"	Added Note 1 to Operating MIPS vs. Voltage (see Table 31-1). Added the VTLA package to Thermal Packaging Characteristics (see Table 31-3). Added Note 2 to DC Temperature and Voltage Specifications (see Table 31-4). Updated Note 2 in the Operating Current DC Characteristics (see Table 31-5). Updated Note 1 in the Idle Current DC Characteristics (see Table 31-6). Updated Note 1 in the Power-Down Current DC Characteristics (see Table 31-7). Updated the I/O Pin Output Specifications (see Table 31-9). Added Note 2 to the BOR Electrical Characteristics (see Table 31-10). Added Note 3 to the Comparator Specifications (see Table 31-13). Parameter D320 (VCORE) was removed (see Table 31-15). Updated the Minimum value for parameter OS50 (see Table 31-18). Parameter SY01 (TPWRT) was removed (see Table 31-22). Note 1 was added and the conditions for parameters ET3, ET4, ET7, and ET9 were updated in the Ethernet Module Specifications (see Table 31-35). Added Note 6 to the ADC Module Specifications (see Table 31-36). Added Note 3 to the 10-bit ADC Conversion Rate Parameter (see Table 31-37). Added Note 4 to the Analog-to-Digital Conversion Timing Requirements (see Table 31-38). The following figures were added: **Figure 31-19: "MDIO Sourced by the PIC32 Device"** **Figure 31-21: "Transmit Signal Timing Relationships at the MII"** **Figure 31-22: "Receive Signal Timing Relationships at the MII"**
Section 32.0 "DC and AC Device Characteristics Graphs"	This new chapter was added.
Section 33.0 "Packaging Information"	Added the 124-lead VTLA package information (see **Section 33.1 "Package Marking Information"** and **Section 33.2 "Package Details"**).
"Product Identification System"	Added the TL definition for VTLA packages.
