### [Understanding Embedded - CPLDs \(Complex Programmable Logic Devices\)](#)

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

### **Applications of Embedded - CPLDs**

#### **Details**

Product Status	Obsolete
Programmable Type	In System Programmable
Delay Time tpd(1) Max	5 ns
Voltage Supply - Internal	1.65V ~ 1.95V
Number of Logic Elements/Blocks	4
Number of Macrocells	64
Number of Gates	-
Number of I/O	32
Operating Temperature	0°C ~ 90°C (TJ)
Mounting Type	Surface Mount
Package / Case	48-LQFP
Supplier Device Package	48-TQFP (7x7)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/lattice-semiconductor/lc4064c-5tn48c">https://www.e-xfl.com/product-detail/lattice-semiconductor/lc4064c-5tn48c</a>

**Figure 1. Functional Block Diagram**

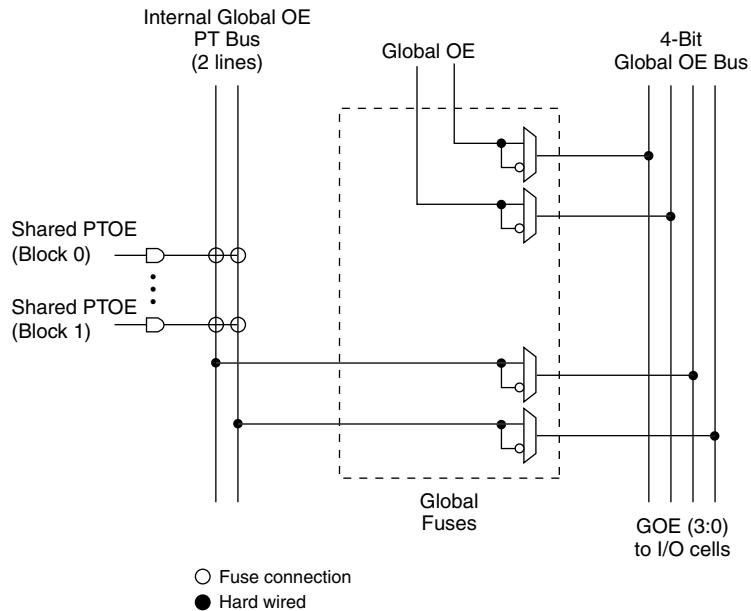

The I/Os in the ispMACH 4000 are split into two banks. Each bank has a separate I/O power supply. Inputs can support a variety of standards independent of the chip or bank power supply. Outputs support the standards compatible with the power supply provided to the bank. Support for a variety of standards helps designers implement designs in mixed voltage environments. In addition, 5V tolerant inputs are specified within an I/O bank that is connected to  $V_{CCO}$  of 3.0V to 3.6V for LVCMS 3.3, LVTTI and PCI interfaces.

## ispMACH 4000 Architecture

There are a total of two GLBs in the ispMACH 4032, increasing to 32 GLBs in the ispMACH 4512. Each GLB has 36 inputs. All GLB inputs come from the GRP and all outputs from the GLB are brought back into the GRP to be connected to the inputs of any other GLB on the device. Even if feedback signals return to the same GLB, they still must go through the GRP. This mechanism ensures that GLBs communicate with each other with consistent and predictable delays. The outputs from the GLB are also sent to the ORP. The ORP then sends them to the associated I/O cells in the I/O block.

## Generic Logic Block

The ispMACH 4000 GLB consists of a programmable AND array, logic allocator, 16 macrocells and a GLB clock generator. Macrocells are decoupled from the product terms through the logic allocator and the I/O pins are decoupled from macrocells through the ORP. Figure 2 illustrates the GLB.

**Figure 10. Global OE Generation for ispMACH 4032**

## Zero Power/Low Power and Power Management

The ispMACH 4000 family is designed with high speed low power design techniques to offer both high speed and low power. With an advanced E<sup>2</sup> low power cell and non sense-amplifier design approach (full CMOS logic approach), the ispMACH 4000 family offers SuperFAST pin-to-pin speeds, while simultaneously delivering low standby power without needing any “turbo bits” or other power management schemes associated with a traditional sense-amplifier approach.

The zero power ispMACH 4000Z is based on the 1.8V ispMACH 4000C family. With innovative circuit design changes, the ispMACH 4000Z family is able to achieve the industry’s “lowest static power”.

## IEEE 1149.1-Compliant Boundary Scan Testability

All ispMACH 4000 devices have boundary scan cells and are compliant to the IEEE 1149.1 standard. This allows functional testing of the circuit board on which the device is mounted through a serial scan path that can access all critical logic nodes. Internal registers are linked internally, allowing test data to be shifted in and loaded directly onto test nodes, or test node data to be captured and shifted out for verification. In addition, these devices can be linked into a board-level serial scan path for more board-level testing. The test access port operates with an LVCMOS interface that corresponds to the power supply voltage.

## I/O Quick Configuration

To facilitate the most efficient board test, the physical nature of the I/O cells must be set before running any continuity tests. As these tests are fast, by nature, the overhead and time that is required for configuration of the I/Os’ physical nature should be minimal so that board test time is minimized. The ispMACH 4000 family of devices allows this by offering the user the ability to quickly configure the physical nature of the I/O cells. This quick configuration takes milliseconds to complete, whereas it takes seconds for the entire device to be programmed. Lattice's ispVM® System programming software can either perform the quick configuration through the PC parallel port, or can generate the ATE or test vectors necessary for a third-party test system.

## Supply Current, ispMACH 4000V/B/C (Cont.)

### Over Recommended Operating Conditions

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
$I_{CC}^4$	Standby Power Supply Current	Vcc = 3.3V	—	13	—	mA
		Vcc = 2.5V	—	13	—	mA
		Vcc = 1.8V	—	3	—	mA

- 1.  $T_A = 25^\circ\text{C}$ , frequency = 1.0 MHz.
- 2. Device configured with 16-bit counters.
- 3.  $I_{CC}$  varies with specific device configuration and operating frequency.
- 4.  $T_A = 25^\circ\text{C}$

## Supply Current, ispMACH 4000Z (Cont.)

Over Recommended Operating Conditions

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
<b>ispMACH 4256ZC</b>						
ICC <sup>1, 2, 3, 5</sup>	Operating Power Supply Current	Vcc = 1.8V, TA = 25°C	—	341	—	µA
		Vcc = 1.9V, TA = 70°C	—	361	—	µA
		Vcc = 1.9V, TA = 85°C	—	372	—	µA
		Vcc = 1.9V, TA = 125°C	—	468	—	µA
ICC <sup>4, 5</sup>	Standby Power Supply Current	Vcc = 1.8V, TA = 25°C	—	13	—	µA
		Vcc = 1.9V, TA = 70°C	—	32	55	µA
		Vcc = 1.9V, TA = 85°C	—	43	90	µA
		Vcc = 1.9V, TA = 125°C	—	135	—	µA

1. TA = 25°C, frequency = 1.0 MHz.

2. Device configured with 16-bit counters.

3. ICC varies with specific device configuration and operating frequency.

4. VCCO = 3.6V, VIN = 0V or VCCO, bus maintenance turned off. VIN above VCCO will add transient current above the specified standby ICC.

5. Includes VCCO current without output loading.

1. All grounds must be electrically connected at the board level. However, for the purposes of I/O current loading, grounds are associated with the bank shown.

2. Pin orientation follows the conventional order from pin 1 marking of the top side view and counter-clockwise.

3. Pin orientation A1 starts from the upper left corner of the top side view with alphabetical order ascending vertically and numerical order ascending horizontally.

1. For device migration considerations, these NC pins are GND pins for I/O banks in ispMACH 4128V devices.

2. For device migration considerations, these NC pins are input signal pins in ispMACH 4256V devices.

## Part Number Description

1. For automotive AEC-Q100 compliant devices, refer to the LA-ispmach 4000V/Z Automotive Family Data Sheet (DS1017).

2. Use ftBGA package. fpBGA package devices have been discontinued via PCN#14A-07.
