

Welcome to [E-XFL.COM](#)**Understanding [Embedded - CPLDs \(Complex Programmable Logic Devices\)](#)**

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

Applications of Embedded - CPLDs**Details**

| | |
|---------------------------------|---|
| Product Status | Obsolete |
| Programmable Type | In System Programmable |
| Delay Time tpd(1) Max | 5 ns |
| Voltage Supply - Internal | 2.3V ~ 2.7V |
| Number of Logic Elements/Blocks | 16 |
| Number of Macrocells | 256 |
| Number of Gates | - |
| Number of I/O | 64 |
| Operating Temperature | -40°C ~ 105°C (TJ) |
| Mounting Type | Surface Mount |
| Package / Case | 100-LQFP |
| Supplier Device Package | 100-TQFP (14x14) |
| Purchase URL | https://www.e-xfl.com/product-detail/lattice-semiconductor/lc4256b-5tn100i |

Product Term Allocator

The product term allocator assigns product terms from a cluster to either logic or control applications as required by the design being implemented. Product terms that are used as logic are steered into a 5-input OR gate associated with the cluster. Product terms that are used for control are steered either to the macrocell or I/O cell associated with the cluster. Table 3 shows the available functions for each of the five product terms in the cluster. The OR gate output connects to the associated I/O cell, providing a fast path for narrow combinatorial functions, and to the logic allocator.

Table 3. Individual PT Steering

| Product Term | Logic | Control |
|-------------------|----------|---|
| PT _n | Logic PT | Single PT for XOR/OR |
| PT _{n+1} | Logic PT | Individual Clock (PT Clock) |
| PT _{n+2} | Logic PT | Individual Initialization or Individual Clock Enable (PT Initialization/CE) |
| PT _{n+3} | Logic PT | Individual Initialization (PT Initialization) |
| PT _{n+4} | Logic PT | Individual OE (PTOE) |

Cluster Allocator

The cluster allocator allows clusters to be steered to neighboring macrocells, thus allowing the creation of functions with more product terms. Table 4 shows which clusters can be steered to which macrocells. Used in this manner, the cluster allocator can be used to form functions of up to 20 product terms. Additionally, the cluster allocator accepts inputs from the wide steering logic. Using these inputs, functions up to 80 product terms can be created.

Table 4. Available Clusters for Each Macrocell

| Macrocell | Available Clusters | | | |
|-----------|--------------------|-----|-----|-----|
| M0 | — | C0 | C1 | C2 |
| M1 | C0 | C1 | C2 | C3 |
| M2 | C1 | C2 | C3 | C4 |
| M3 | C2 | C3 | C4 | C5 |
| M4 | C3 | C4 | C5 | C6 |
| M5 | C4 | C5 | C6 | C7 |
| M6 | C5 | C6 | C7 | C8 |
| M7 | C6 | C7 | C8 | C9 |
| M8 | C7 | C8 | C9 | C10 |
| M9 | C8 | C9 | C10 | C11 |
| M10 | C9 | C10 | C11 | C12 |
| M11 | C10 | C11 | C12 | C13 |
| M12 | C11 | C12 | C13 | C14 |
| M13 | C12 | C13 | C14 | C15 |
| M14 | C13 | C14 | C15 | — |
| M15 | C14 | C15 | — | — |

Wide Steering Logic

The wide steering logic allows the output of the cluster allocator n to be connected to the input of the cluster allocator $n+4$. Thus, cluster chains can be formed with up to 80 product terms, supporting wide product term functions and allowing performance to be increased through a single GLB implementation. Table 5 shows the product term chains.

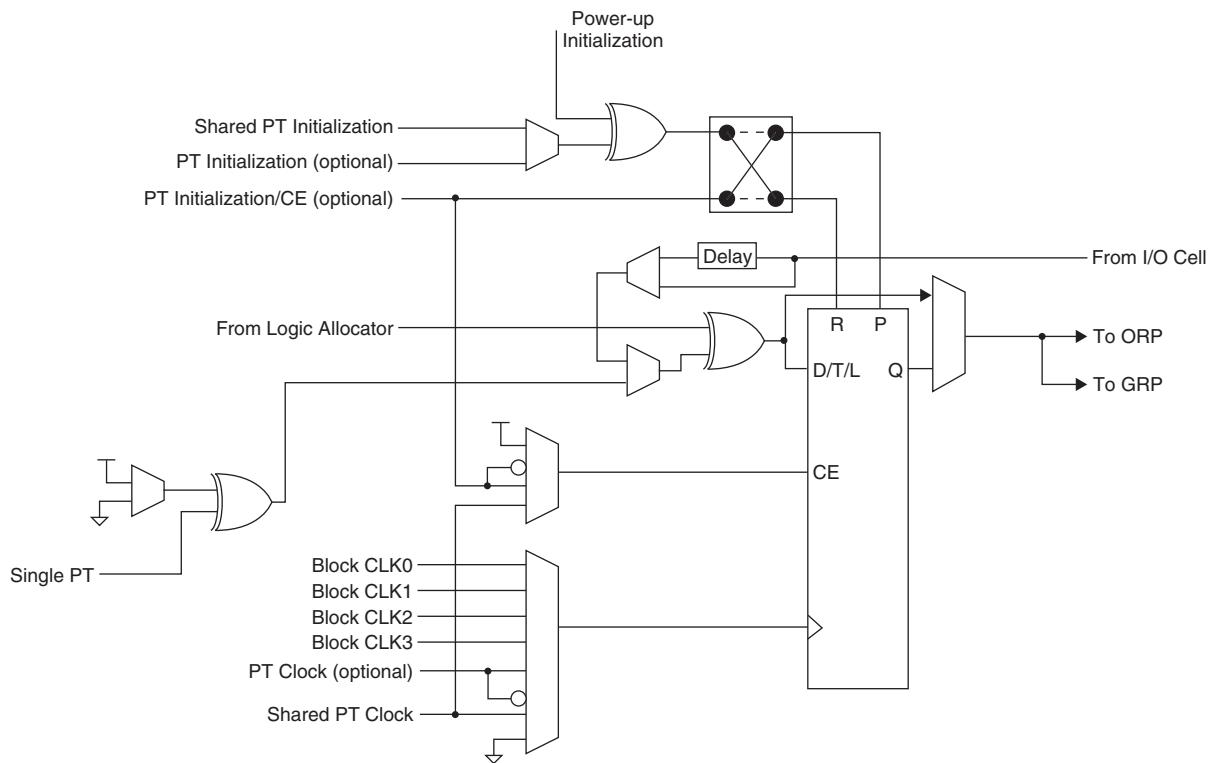

Table 5. Product Term Expansion Capability

| Expansion Chains | Macrocells Associated with Expansion Chain (with Wrap Around) | Max PT/Macrocell |
|------------------|---|------------------|
| Chain-0 | M0 M4 M8 M12 M0 | 75 |
| Chain-1 | M1 M5 M9 M13 M1 | 80 |
| Chain-2 | M2 M6 M10 M14 M2 | 75 |
| Chain-3 | M3 M7 M11 M15 M3 | 70 |

Every time the super cluster allocator is used, there is an incremental delay of t_{EXP} . When the super cluster allocator is used, all destinations other than the one being steered to, are given the value of ground (i.e., if the super cluster is steered to M (n+4), then M (n) is ground).

Macrocell

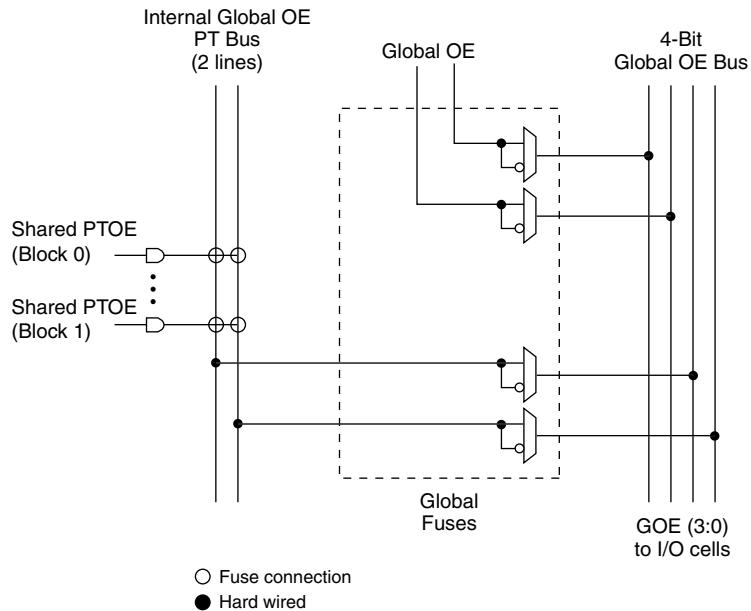

The 16 macrocells in the GLB are driven by the 16 outputs from the logic allocator. Each macrocell contains a programmable XOR gate, a programmable register/latch, along with routing for the logic and control functions. Figure 5 shows a graphical representation of the macrocell. The macrocells feed the ORP and GRP. A direct input from the I/O cell allows designers to use the macrocell to construct high-speed input registers. A programmable delay in this path allows designers to choose between the fastest possible set-up time and zero hold time.

Figure 5. Macrocell

Enhanced Clock Multiplexer

The clock input to the flip-flop can select any of the four block clocks along with the shared PT clock, and true and complement forms of the optional individual term clock. An 8:1 multiplexer structure is used to select the clock. The eight sources for the clock multiplexer are as follows:

- Block CLK0
- Block CLK1

Figure 10. Global OE Generation for ispMACH 4032

Zero Power/Low Power and Power Management

The ispMACH 4000 family is designed with high speed low power design techniques to offer both high speed and low power. With an advanced E² low power cell and non sense-amplifier design approach (full CMOS logic approach), the ispMACH 4000 family offers SuperFAST pin-to-pin speeds, while simultaneously delivering low standby power without needing any “turbo bits” or other power management schemes associated with a traditional sense-amplifier approach.

The zero power ispMACH 4000Z is based on the 1.8V ispMACH 4000C family. With innovative circuit design changes, the ispMACH 4000Z family is able to achieve the industry’s “lowest static power”.

IEEE 1149.1-Compliant Boundary Scan Testability

All ispMACH 4000 devices have boundary scan cells and are compliant to the IEEE 1149.1 standard. This allows functional testing of the circuit board on which the device is mounted through a serial scan path that can access all critical logic nodes. Internal registers are linked internally, allowing test data to be shifted in and loaded directly onto test nodes, or test node data to be captured and shifted out for verification. In addition, these devices can be linked into a board-level serial scan path for more board-level testing. The test access port operates with an LVCMOS interface that corresponds to the power supply voltage.

I/O Quick Configuration

To facilitate the most efficient board test, the physical nature of the I/O cells must be set before running any continuity tests. As these tests are fast, by nature, the overhead and time that is required for configuration of the I/Os’ physical nature should be minimal so that board test time is minimized. The ispMACH 4000 family of devices allows this by offering the user the ability to quickly configure the physical nature of the I/O cells. This quick configuration takes milliseconds to complete, whereas it takes seconds for the entire device to be programmed. Lattice's ispVM® System programming software can either perform the quick configuration through the PC parallel port, or can generate the ATE or test vectors necessary for a third-party test system.

Supply Current, ispMACH 4000V/B/C

Over Recommended Operating Conditions

Revision History (Cont.)

| Date | Version | Change Summary |
|---------------|---------|---|
| January 2004 | 20z | ispMACH 4000Z data sheet status changed from preliminary to final. Documents production release of the ispMACH 4256Z device. |
| | | Added new feature - ispMACH 4000Z supports operation down to 1.6V. |
| | | Added lead-free packaging ordering part numbers for the ispMACH 4000Z/C/V devices. |
| April 2004 | 21z | Updated I_{PU} (I/O Weak Pull-up Resistor Current) max. specification for the ispMACH 4000V/B/C; -150 μ A to -200 μ A. |
| November 2004 | 22z | Added User Electronic Signature section. |
| | | Added ispMACH 4000B (2.5V) Lead-Free Ordering Part Numbers. |
| December 2004 | 22z.1 | Updated Further Information section. |
| February 2006 | 22z.2 | Clarification to ispMACH 4000Z Input Leakage (I_{IH}) specification. |
| March 2007 | 22.3 | Updated ispMACH 4000 Introduction section. |
| | | Updated Signal Descriptions table. |
| June 2007 | 22.4 | Updated Features bullets to include reference to "LA" automotive data sheet under the "Broad Device Offering" bullet. |
| | | Added footnote 1 to Part Number Description to reference the "LA" automotive data sheet. |
| | | Changed device temperature references from 'Automotive' to "Extended Temperature" for non-AEC-Q100 qualified devices. |
| November 2007 | 23.0 | Added 256-ftBGA package Ordering Part Number information per PCN#14A-07. |
| May 2009 | 23.1 | Correction to t_{CW} , t_{GW} , t_{WIR} and f_{MAX} parameters in ispMACH 4000Z External Switching Characteristics table. |
| | | Correction to t_{CW} , t_{GW} , t_{WIR} and f_{MAX} parameters in ispMACH 4000V/B/C External Switching Characteristics table. |
