What is "**Embedded - Microcontrollers**"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "**Embedded - Microcontrollers**"

Details	
Product Status	Obsolete
Core Processor	eZ8
Core Size	8-Bit
Speed	20MHz
Connectivity	IrDA, UART/USART
Peripherals	Brown-out Detect/Reset, LED, LVD, POR, PWM, Temp Sensor, WDT
Number of I/O	17
Program Memory Size	8KB (8K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	1K x 8
Voltage - Supply (Vcc/Vdd)	2.7V ~ 3.6V
Data Converters	A/D 7x10b
Oscillator Type	Internal
Operating Temperature	0°C ~ 70°C (TA)
Mounting Type	Surface Mount
Package / Case	20-SOIC (0.295", 7.50mm Width)
Supplier Device Package	-
Purchase URL	https://www.e-xfl.com/product-detail/zilog/z8f082ash020sc

Pin Description

The Z8 Encore! XP® F082A Series products are available in a variety of packages styles and pin configurations. This chapter describes the signals and available pin configurations for each of the package styles. For information on physical package specifications, see Packaging on page 241.

Available Packages

The following package styles are available for each device in the Z8 Encore! XP F082A Series product line:

- SOIC
  - 8-, 20-, and 28-pin
- PDIP
  - 8-, 20-, and 28-pin
- SSOP
  - 20- and 28- pin
- QFN (this is an MLF-S, a QFN style package with an 8-pin SOIC footprint)
  - 8-pin

In addition, the Z8 Encore! XP F082A Series devices are available both with and without advanced analog capability (ADC, temperature sensor and op amp). Devices Z8F082A, Z8F042A, Z8F022A, and Z8F012A contain the advanced analog, while devices Z8F081A, Z8F041A, Z8F021A, and Z8F011A do not have the advanced analog capability.

Pin Configurations

Figure 2 through Figure 4 display the pin configurations for all the packages available in the Z8 Encore! XP F082A Series. See Table 2 on page 11 for a description of the signals. The analog input alternate functions (ANx) are not available on the Z8F081A, Z8F041A, Z8F021A, and Z8F011A devices. The analog supply pins (AV$_{DD}$ and AV$_{SS}$) are also not available on these parts, and are replaced by PB6 and PB7.

At reset, all Port A, B and C pins default to input state. In addition, any alternate functionality is not enabled, so the pins function as general purpose input ports until programmed otherwise. At powerup, the PD0 pin defaults to the RESET alternate function.

Table 3. Pin Characteristics (20- and 28-pin Devices) (Continued)

Symbol Mnemonic	Direction	Reset Direction	Active Low or Active High	Tristate Output	Internal Pull-up or Pull-down	Schmitt-Trigger Input	Open Drain Output	5 V Tolerance
PC[7:0]	I/O	I	N/A	Yes	Programmable Pull-up	Yes	Yes, Programmable	PC[7:3] unless pullups enabled
RESET/PD0	I/O	I/O (defaults to RESET)	Low (in Reset mode)	Yes (PD0 only)	Programmable for PD0; always on for RESET	Yes	Programmable for PD0; always on for RESET	Yes, unless pullups enabled
VDD	N/A	N/A	N/A	N/A			N/A	N/A
VSS	N/A	N/A	N/A	N/A			N/A	N/A

➤ Note: PB6 and PB7 are available only in those devices without ADC.

Table 4. Pin Characteristics (8-Pin Devices)

Symbol Mnemonic	Direction	Reset Direction	Active Low or Active High	Tristate Output	Internal Pull-up or Pull-down	Schmitt-Trigger Input	Open Drain Output	5 V Tolerance
PA0/DBG	I/O	I (but can change during reset if key sequence detected)	N/A	Yes	Programmable Pull-up	Yes	Yes, Programmable	Yes, unless pull-ups enabled
PA1	I/O	I	N/A	Yes	Programmable Pull-up	Yes	Yes, Programmable	Yes, unless pull-ups enabled
RESET/PA2	I/O	I/O (defaults to RESET)	Low (in Reset mode)	Yes	Programmable for PA2; always on for RESET	Yes	Programmable for PA2; always on for RESET	Yes, unless pull-ups enabled
PA[5:3]	I/O	I	N/A	Yes	Programmable Pull-up	Yes	Yes, Programmable	Yes, unless pull-ups enabled
V_{DD}	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
V_{SS}	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

Address Space

The eZ8 CPU can access the following three distinct address spaces:

1. The Register File contains addresses for the general-purpose registers and the eZ8 CPU, peripheral, and general-purpose I/O port control registers.

2. The Program Memory contains addresses for all memory locations having executable code and/or data.

3. The Data Memory contains addresses for all memory locations that contain data only.

These three address spaces are covered briefly in the following subsections. For more information on eZ8 CPU and its address space, refer to eZ8 CPU Core User Manual (UM0128) available for download at www.zilog.com.

Register File

The Register File address space in the Z8 Encore! MCU is 4 KB (4096 bytes). The Register File is composed of two sections—control registers and general-purpose registers. When instructions are executed, registers defined as sources are read, and registers defined as destinations are written. The architecture of the eZ8 CPU allows all general-purpose registers to function as accumulators, address pointers, index registers, stack areas, or scratch pad memory.

The upper 256 bytes of the 4 KB Register File address space are reserved for control of the eZ8 CPU, the on-chip peripherals, and the I/O ports. These registers are located at addresses from F00H to FFFH. Some of the addresses within the 256 B control register section are reserved (unavailable). Reading from a reserved Register File address returns an undefined value. Writing to reserved Register File addresses is not recommended and can produce unpredictable results.

The on-chip RAM always begins at address 000H in the Register File address space. The Z8 Encore! XP® F082A Series devices contain 256 B to 1 KB of on-chip RAM. Reading from Register File addresses outside the available RAM addresses (and not within the control register address space) returns an undefined value. Writing to these Register File addresses produces no effect.

Program Memory

The eZ8 CPU supports 64 KB of Program Memory address space. The Z8 Encore! XP F082A Series devices contain 1 KB to 8 KB of on-chip Flash memory in the Program Memory address space, depending on the device. Reading from Program Memory
