Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Periphery Performance

This section describes the periphery performance, high-speed I/O, and external memory interface.

Actual achievable frequency depends on design and system specific factors. Ensure proper timing closure in your design and perform HSPICE/IBIS simulations based on your specific design and system setup to determine the maximum achievable frequency in your system.

Configuration Files

Table 1-72: Uncompressed .rbf Sizes for Arria V Devices

Use this table to estimate the file size before design compilation. Different configuration file formats, such as a hexadecimal file (.hex) or tabular text file (.ttf) format, have different file sizes.

For the different types of configuration file and file sizes, refer to the Quartus Prime software. However, for a specific version of the Quartus Prime software, any design targeted for the same device has the same uncompressed configuration file size.

The IOCSR raw binary file (.rbf) size is specifically for the Configuration via Protocol (CvP) feature.

⁽¹⁰⁷⁾ To enable CLKUSR as the initialization clock source, turn on the **Enable user-supplied start-up clock (CLKUSR)** option in the Quartus Prime software from the **General** panel of the **Device and Pin Options** dialog box.

⁽¹¹⁸⁾ This value describes the budget for the DC (static) power supply tolerance and does not include the dynamic tolerance requirements. Refer to the PDN tool for the additional budget for the dynamic tolerance requirements.

⁽¹²¹⁾ This supply must be connected to 1.0 V if the transceiver is configured at a data rate > 6.5 Gbps, and to 1.05 V if configured at a data rate > 10.3 Gbps when DFE is used. For data rate up to 6.5 Gbps, you can connect this supply to 0.85 V.

	SERDES factor J = 1, uses SDR Register	(184)	—	(189)	(184)	—	(189)	Mbps
Emulated Differential I/O Standards with Three External Output Resistor Networks - f_{HSDR} (data rate) ⁽¹⁹⁰⁾	SERDES factor J = 4 to 10 ⁽¹⁹¹⁾	(184)	—	840	(184)	—	840	Mbps

⁽¹⁸²⁾ If the receiver with DPA enabled and transmitter are using shared PLLs, the minimum data rate is 150 Mbps.

⁽¹⁸³⁾ The F_{MAX} specification is based on the fast clock used for serial data. The interface F_{MAX} is also dependent on the parallel clock domain which is design dependent and requires timing analysis.

⁽¹⁸⁴⁾ The minimum specification depends on the clock source (for example, the PLL and clock pin) and the clock routing resource (global, regional, or local) that you use. The I/O differential buffer and input register do not have a minimum toggle rate.

⁽¹⁸⁵⁾ Arria V GZ RX LVDS will need DPA. For Arria V GZ TX LVDS, the receiver side component must have DPA.

⁽¹⁸⁶⁾ Requires package skew compensation with PCB trace length.

⁽¹⁸⁷⁾ Do not mix single-ended I/O buffer within LVDS I/O bank.

⁽¹⁸⁸⁾ Chip-to-chip communication only with a maximum load of 5 pF.

⁽¹⁸⁹⁾ The maximum ideal data rate is the SERDES factor (J) \times the PLL maximum output frequency (f_{OUT}) provided you can close the design timing and the signal integrity simulation is clean.

⁽¹⁹⁰⁾ You must calculate the leftover timing margin in the receiver by performing link timing closure analysis. You must consider the board skew margin, transmitter channel-to-channel skew, and receiver sampling margin to determine leftover timing margin.

⁽¹⁹¹⁾ When using True LVDS RX channels for emulated LVDS TX channel, only serialization factors 1 and 2 are supported.
