

Welcome to E-XFL.COM

#### What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "<u>Embedded -</u> <u>Microcontrollers</u>"

#### Details

Product Status	Active
Core Processor	ARM® Cortex®-M3
Core Size	32-Bit Single-Core
Speed	36MHz
Connectivity	I <sup>2</sup> C, IrDA, LINbus, SPI, UART/USART
Peripherals	DMA, PDR, POR, PVD, PWM, Temp Sensor, WDT
Number of I/O	26
Program Memory Size	64KB (64K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	10K x 8
Voltage - Supply (Vcc/Vdd)	2V ~ 3.6V
Data Converters	A/D 10x12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	36-VFQFN Exposed Pad
Supplier Device Package	36-VFQFPN (6x6)
Purchase URL	https://www.e-xfl.com/product-detail/stmicroelectronics/stm32f101t8u6

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

# **PIC16HV540**

# PIC16HV540 Data Sheet Errata

The PIC16HV540 parts you have received conform functionally to the Device Data Sheet (DS40197**B**), except for the anomalies described below.

None.

# Clarifications/Corrections to the Data Sheet:

In the Device Data Sheet (DS40197**B**), the following clarifications and corrections should be noted.

### 1. Module: PORTB

1. Page 19, Section 5.2 **PORTB** of DS40197B has an error in the text. The Text reads: Only pins configured as inputs can cause this wake-up on pin change to occur.

The corrected text should read: Only pins **RB<0:3>** when configured as inputs can cause this wake-up on pin change to occur.

Note:	RB7 will always wake-up the device if					
	driven to a logic 1 during SLEEP mode.					
	This will happen if RB7 is configured as an					
	input or output.					

#### 2. Module: DC Characteristics

Table 10.1, Regulation Voltage, Max. changes from 6 to 6.5, as shown in bold below.

# TABLE 10-1:DC CHARACTERISTICS:PIC16HV540-04, 20 (COMMERCIAL)PIC16HV540-04I, 20I (INDUSTRIAL)

DC Characteristics Power Supply Pins							
Characteristic	Sym.	Min.	Typ <sup>(1)</sup>	Max.	Units	Conditions	
Supply Voltage	Vdd	3.5 4.5	_	15 15	V V	LP, XT and RC modes HS mode	
RAM Data Retention Voltage <sup>(2)</sup>	VDR	—	1.5*	_	V	Device in SLEEP mode	
VDD start voltage to ensure Power-on Reset	VPOR	-	Vss	-	V	See section on Power-on Reset for details	
VDD rise rate to ensure Power-on Reset	SVDD	0.05 Vdd			V/ms	See Section 7.4 for details on Power-on Reset	
Supply Current <sup>(3)</sup> HS option XT and RC <sup>(4)</sup> options LP option	IDD		5 1.8 300	20 3.3 500	mA mA μA	Fosc = 20 MHz, VDD = 15V, VREG = 5V Fosc = 4 MHz, VDD = 15V, VREG = 5V Fosc = 32 kHz, VDD = 15V, VREG = 5V, WDT disabled	
Power-down Current <sup>(5)(6)</sup>	IPD	_	4.5	20	μA	VDD = 15V, VREG = 5V SLEEP timer enable, BOD disabled	
		-	0.25	14	μA	VDD = 15V, VREG = 3V SLEEP timer enable, BOD disabled	
		-	1.8	10	μA	VDD = 15V, VREG = 5V SLEEP timer disabled, BOD disabled	
		—	1.4	5	μA	VDD = 15V, VREG = 3V SLEEP timer disabled, BOD disabled	
Brown-out Current		—	0.5	_	μA	VDD = 15V, VREG = 5V, BOD enabled	
Brown-out Detector Threshold	Bvdd	2.7 1.8	3.1 2.2	4.2 2.8	V V	Vdd = 15V, VREG = 5V* (7) Vdd = 15V, VREG = 3V* (7)	
Regulation Voltage	Vio	2	3	4.5	V	VDD = 15V, VREG = 3V, Unloaded outputs, SLEEP	
		4	5	6.5	V	VDD = 15V, VREG = 5V, Unloaded outputs, SLEEP	

\* These parameters are characterized but not tested.

- Note 1: Data in the Typical ("Typ") column is based on characterization results at 25°C. This data is for design guidance only and is not tested.
  - 2: This is the limit to which VDD can be lowered in SLEEP mode without losing RAM data.
  - 3: The supply current is mainly a function of the operating voltage and frequency. Other factors such as bus loading, oscillator type, bus rate, internal code execution pattern, and temperature also have an impact on the current consumption. a) The test conditions for all IDD measurements in active operation mode are:
    - OSC1 = external square wave, from rail-to-rail; all I/O pins tristated, pulled to VSS, T0CKI = VDD,  $\overline{MCLR}$  = VDD; WDT enabled/disabled as specified.
    - b) For standby current measurements, the conditions are the same, except that the device is in SLEEP mode.
  - 4: Does not include current through REXT. The current through the resistor can be estimated by the formula: IR = VDD/2REXT (mA) with REXT in k $\Omega$ .
  - 5: The power down current in SLEEP mode does not depend on the oscillator type. Power-down current is measured with the part in SLEEP mode, with all I/O pins in hi-impedance state and tied to VDD and Vss.
  - 6: The oscillator start-up time can be as much as 8 seconds for XT and LP oscillator selection, if the SLEEP mode is exited or during initial power-up.
  - 7: See Section 7.6.1 for additional information.

## **REVISION HISTORY**

Rev A Document (6/2003)

Added Item 2 to the Clarification/Corrections to the Data Sheet Section, changing max. of Regulation Voltage from 6 to 6.5.

Rev B Document (6/2003)

Previous errata, DS80123A was combined with this errata. Error in text, Section 5.2, PORTB of the data sheet.

#### Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is intended through suggestion only and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. No representation or warranty is given and no liability is assumed by Microchip Technology Incorporated with respect to the accuracy or use of such information, or infringement of patents or other intellectual property rights arising from such use or otherwise. Use of Microchip's products as critical components in life support systems is not authorized except with express written approval by Microchip. No licenses are conveyed, implicitly or otherwise, under any intellectual property rights.

#### Trademarks

The Microchip name and logo, the Microchip logo, KEELOQ, MPLAB, PIC, PICmicro, PICSTART, PRO MATE and PowerSmart are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

FilterLab, microID, MXDEV, MXLAB, PICMASTER, SEEVAL and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Accuron, Application Maestro, dsPIC, dsPICDEM, dsPICDEM.net, ECONOMONITOR, FanSense, FlexROM, fuzzyLAB, In-Circuit Serial Programming, ICSP, ICEPIC, microPort, Migratable Memory, MPASM, MPLIB, MPLINK, MPSIM, PICC, PICkit, PICDEM, PICDEM.net, PowerCal, PowerInfo, PowerMate, PowerTool, rfLAB, rfPIC, Select Mode, SmartSensor, SmartShunt, SmartTel and Total Endurance are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

Serialized Quick Turn Programming (SQTP) is a service mark of Microchip Technology Incorporated in the U.S.A.

All other trademarks mentioned herein are property of their respective companies.

© 2003, Microchip Technology Incorporated, Printed in the U.S.A., All Rights Reserved.

Microchip received QS-9000 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona in July 1999 and Mountain View, California in March 2002. The Company's quality system processes and procedures are QS-9000 compliant for its PICmicro® 8-bit MCUs, KEELoQ® code hopping devices, Serial EEPROMs, microperipherals, non-volatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001 certified.
