

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |                                                                                                                                                                       |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Status             | Active                                                                                                                                                                |
| Core Processor             | ARM® Cortex®-M4                                                                                                                                                       |
| Core Size                  | 32-Bit Single-Core                                                                                                                                                    |
| Speed                      | 72MHz                                                                                                                                                                 |
| Connectivity               | CANbus, EBI/EMI, I <sup>2</sup> C, IrDA, LINbus, SmartCard, SPI, UART/USART                                                                                           |
| Peripherals                | Brown-out Detect/Reset, DMA, POR, PWM, WDT                                                                                                                            |
| Number of I/O              | 53                                                                                                                                                                    |
| Program Memory Size        | 2MB (2M x 8)                                                                                                                                                          |
| Program Memory Type        | FLASH                                                                                                                                                                 |
| EEPROM Size                | -                                                                                                                                                                     |
| RAM Size                   | 384K x 8                                                                                                                                                              |
| Voltage - Supply (Vcc/Vdd) | 1.8V ~ 3.8V                                                                                                                                                           |
| Data Converters            | A/D 16x12b SAR; D/A 2x12b                                                                                                                                             |
| Oscillator Type            | Internal                                                                                                                                                              |
| Operating Temperature      | -40°C ~ 125°C (TA)                                                                                                                                                    |
| Mounting Type              | Surface Mount                                                                                                                                                         |
| Package / Case             | 64-TQFP                                                                                                                                                               |

## 4. Electrical Specifications

### 4.1 Electrical Characteristics

All electrical parameters in all tables are specified under the following conditions, unless stated otherwise:

- Typical values are based on  $T_{AMB}=25\text{ }^{\circ}\text{C}$  and  $V_{DD}=3.3\text{ V}$ , by production test and/or technology characterization.
- Minimum and maximum values represent the worst conditions across supply voltage, process variation, and operating temperature, unless stated otherwise.

Refer to [4.1.2.1 General Operating Conditions](#) for more details about operational supply and temperature limits.

### 4.1.2.1 General Operating Conditions

**Table 4.2. General Operating Conditions**

| Parameter                                        | Symbol          | Test Condition                                      | Min  | Typ | Max           | Unit |
|--------------------------------------------------|-----------------|-----------------------------------------------------|------|-----|---------------|------|
| Operating ambient temperature range <sup>6</sup> | $T_A$           | -G temperature grade                                | -40  | 25  | 85            | °C   |
|                                                  |                 | -I temperature grade                                | -40  | 25  | 125           | °C   |
| AVDD supply voltage <sup>2</sup>                 | $V_{AVDD}$      |                                                     | 1.8  | 3.3 | 3.8           | V    |
| VREGVDD operating supply voltage <sup>2 1</sup>  | $V_{VREGVDD}$   | DCDC in regulation                                  | 2.4  | 3.3 | 3.8           | V    |
|                                                  |                 | DCDC in bypass, 50mA load                           | 1.8  | 3.3 | 3.8           | V    |
|                                                  |                 | DCDC not in use. DVDD externally shorted to VREGVDD | 1.8  | 3.3 | 3.8           | V    |
| VREGVDD current                                  | $I_{VREGVDD}$   | DCDC in bypass, $T \leq 85^\circ\text{C}$           | —    | —   | 200           | mA   |
|                                                  |                 | DCDC in bypass, $T > 85^\circ\text{C}$              | —    | —   | 100           | mA   |
| DVDD operating supply voltage                    | $V_{DVDD}$      |                                                     | 1.62 | —   | $V_{VREGVDD}$ | V    |
| IOVDD operating supply voltage                   | $V_{IOVDD}$     | All IOVDD pins <sup>5</sup>                         | 1.62 | —   | $V_{VREGVDD}$ | V    |
| DECOUPLE output capacitor <sup>3 4</sup>         | $C_{DECOUPLE}$  |                                                     | 0.75 | 1.0 | 2.75          | μF   |
| HFCORECLK frequency                              | $f_{CORE}$      | VSCALE2, MODE = WS3                                 | —    | —   | 72            | MHz  |
|                                                  |                 | VSCALE2, MODE = WS2                                 | —    | —   | 54            | MHz  |

|                                                                         |                         | 12-bit SAR conversions, 200 ms scan rate, CS0CG=0 (Gain = 10x), 8 samples per scan <sup>1</sup>                                                     | —   | 79   | —   | nA            |
|                                                                         |                         | Delta Modulation conversions, 200 ms scan rate, 8 comparisons per sample (DMCR = 1, DMR = 2), CS0CG=0 (Gain = 10x), 8 samples per scan <sup>1</sup> | —   | 57   | —   | nA            |

#### 4.1.21 Pulse Counter (PCNT)

**Table 4.29. Pulse Counter (PCNT)**

| Parameter       | Symbol   | Test Condition                               | Min | Typ | Max | Unit |
|-----------------|----------|----------------------------------------------|-----|-----|-----|------|
| Input frequency | $F_{IN}$ | Asynchronous Single and Quadrature Modes     | —   | —   | 20  | MHz  |
|                 |          | Sampled Modes with Debounce filter set to 0. | —   | —   | 8   | kHz  |

#### 4.1.22 Analog Port (APORT)

**Table 4.30. Analog Port (APORT)**

| Parameter                     | Symbol      | Test Condition       | Min | Typ | Max | Unit    |
|-------------------------------|-------------|----------------------|-----|-----|-----|---------|
| Supply current <sup>2 1</sup> | $I_{APORT}$ | Operation in EM0/EM1 | —   | 7   | —   | $\mu A$ |
|                               |             | Operation in EM2/EM3 | —   | 915 | —   | nA      |

**Note:**

- Specified current is for continuous APORT operation. In applications where the APORT is not requested continuously (e.g. periodic ACMP requests from LESENSE in EM2), the average current requirements can be estimated by multiplying the duty cycle of the requests by the specified continuous current number.
- Supply current increase that occurs when an analog peripheral requests access to APORT. This current is not included in reported module currents. Additional peripherals requesting access to APORT do not incur further current.

## EBI Read Enable Timing Requirements

Timing applies to both EBI\_REn and EBI\_NANDREn for all addressing modes and both polarities. All numbers are based on route locations 0,1,2 only (with all EBI alternate functions using the same location at the same time). Timing is specified at 10% and 90% of IOVDD, 25 pF external loading, and slew rate for all GPIO set to 6.

**Table 4.40. EBI Read Enable Timing Requirements**

| Parameter                                               | Symbol        | Test Condition      | Min | Typ | Max | Unit |
|---------------------------------------------------------|---------------|---------------------|-----|-----|-----|------|
| Setup time, from EBI_AD valid to trailing EBI_REn edge  | $t_{SU\_REn}$ | IOVDD $\geq$ 1.62 V | 55  | —   | —   | ns   |
|                                                         |               | IOVDD $\geq$ 3.0 V  | 36  | —   | —   | ns   |
| Hold time, from trailing EBI_REn edge to EBI_AD invalid | $t_{H\_REn}$  | IOVDD $\geq$ 1.62 V | -9  | —   | —   | ns   |

Figure 4.20. SDIO MMC DDR Mode Timing

## 4.1.28 Quad SPI (QSPI)

### 4.1.28.1 QSPI SDR Mode

#### QSPI SDR Mode Timing (Location 0)

Timing is specified with voltage scaling disabled, PHY-mode, route location 0 only, TX DLL = 23, RX DLL = 48, 20-25 pF loading per GPIO, and slew rate for all GPIO set to 6, DRIVESTRENGTH = STRONG.

Table 4.54. QSPI SDR Mode Timing (Location 0)

| Parameter        | Symbol   | Test Condition | Min                   | Typ | Max         | Unit |
|------------------|----------|----------------|-----------------------|-----|-------------|------|
| Full SCLK period | T        |                | $(1/F_{SCLK}) * 0.95$ | —   | —           | ns   |
| Output valid     | $t_{OV}$ |                | —                     | —   | $T/2 - 2.4$ | ns   |
| Output hold      | $t_{OH}$ |                | $T/2 - 32.9$          | —   | —           | ns   |
| Input setup      | $t_{SU}$ |                | $36.2 - T/2$          | —   | —           | ns   |
| Input hold       | $t_{H}$  |                | $T/2 - 3.3$           | —   | —           | ns   |

| Pin Name | Pin(s) | Description                                                                   | Pin Name | Pin(s)     | Description                                                                                                                                                                                 |

**Note:**

1. GPIO with 5V tolerance are indicated by (5V).
2. The pins PD13, PD14, and PD15 will not be 5V tolerant on all future devices. In order to preserve upgrade options with full hardware compatibility, do not use these pins with 5V domains.

## 5.12 EFM32GG11B8xx in QFP64 Device Pinout

Figure 5.12. EFM32GG11B8xx in QFP64 Device Pinout

The following table provides package pin connections and general descriptions of pin functionality. For detailed information on the supported features for each GPIO pin, see [5.20 GPIO Functionality Table](#) or [5.21 Alternate Functionality Overview](#).

### 7.3 BGA152 Package Marking

Figure 7.3. BGA152 Package Marking

The package marking consists of:

- P P P P P P P P P P – The part number designation.
- T T T T T T – A trace or manufacturing code. The first letter is the device revision.
- Y Y – The last 2 digits of the assembly year.
- W W – The 2-digit workweek when the device was assembled.

## 13. Revision History

### Revision 0.6

March, 2018

- Removed "Confidential" watermark.
- Updated [4.1 Electrical Characteristics](#) and [4.2 Typical Performance Curves](#) with latest characterization data.

### Revision 0.2

October, 2017

- Updated memory maps to latest formatting and to include all peripherals.
- Updated all electrical specifications tables with latest characterization results.
- **Absolute Maximum Ratings** Table:
  - Removed redundant  $I_{VSSMAX}$  line.
  - Added footnote to clarify  $V_{DIGPIN}$  specification for 5V tolerant GPIO.
- **General Operating Conditions** Table:
  - Removed  $dV_{DD}$  specification and redundant footnote about shorting VREGVDD and AVDD together.
  - Added footnote about IOVDD voltage restriction when CSEN peripheral is used with chopping enabled.
- **Flash Memory Characteristics** Table: Added timing measurement clarification for Device Erase and Mass Erase.
- **Analog to Digital Converter (ADC)** Table:
  - Added header text for general specification conditions.
  - Added footnote for clarification of input voltage limits.
- Minor typographical corrections, including capitalization, mis-spellings and punctuation marks, throughout document.
- Minor formatting and styling updates, including table formats, TOC location, and boilerplate information throughout document.

### Revision 0.1

April 27th, 2017

Initial release.

Silicon Labs

# Simplicity Studio™4

## Simplicity Studio

One-click access to MCU and wireless tools, documentation, software, source code libraries & more. Available for Windows, Mac and Linux!

### Disclaimer

Silicon Labs intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Labs products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Labs reserves the right to make changes without further notice and limitation to product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Silicon Labs shall have no liability for the consequences of use of the information supplied herein. This document does not imply or express copyright licenses granted hereunder to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any Life Support System without the specific written consent of Silicon Labs. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Labs products are not designed or authorized for military applications. Silicon Labs products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons.
