

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |                                                                                                                                                                       |

| Parameter                                                        | Symbol                     | Test Condition                                                                          | Min | Typ  | Max | Unit   |
|------------------------------------------------------------------|----------------------------|-----------------------------------------------------------------------------------------|-----|------|-----|--------|
| Supply current, continuous conversions, WARMUP-MODE=KEEPCSENWARM | I <sub>CSEN_ACTIVE</sub>   | SAR or Delta Modulation conversions of 33 pF capacitor, CS0CG=0 (Gain = 10x), always on | —   | 90.5 | —   | μA     |
| HFPERCLK supply current                                          | I <sub>CSEN_HFPERCLK</sub> | Current contribution from HFPERCLK when clock to CSEN block is enabled.                 | —   | 2.25 | —   | μA/MHz |

**Note:**

1. Current is specified with a total external capacitance of 33 pF per channel. Average current is dependent on how long the module is actively sampling channels within the scan period, and scales with the number of samples acquired. Supply current for a specific application can be estimated by multiplying the current per sample by the total number of samples per period ( $\text{total\_current} = \text{single\_sample\_current} * (\text{number\_of\_channels} * \text{accumulation})$ ).

## EBI TFT Output Timing

All numbers are based on route locations 0,1,2 only (with all EBI alternate functions using the same location at the same time). Timing is specified at 10% and 90% of IOVDD, 25 pF external loading, and slew rate for all GPIO set to 6.

**Table 4.39. EBI TFT Output Timing**

| Parameter                                    | Symbol          | Test Condition      | Min                                                | Typ | Max | Unit |
|----------------------------------------------|-----------------|---------------------|----------------------------------------------------|-----|-----|------|
| Output hold time, EBI_DCLK to EBI_AD invalid | $t_{OH\_DCLK}$  | IOVDD $\geq$ 1.62 V | -23 +<br>(TFTHOLD<br>* $t_{HFCOR-}$<br>ECLK)       | —   | —   | ns   |
|                                              |                 | IOVDD $\geq$ 3.0 V  | -12 +<br>(TFTHOLD<br>* $t_{HFCOR-}$<br>ECLK)       | —   | —   | ns   |
| Output setup time, EBI_AD valid to EBI_DCLK  | $t_{OSU\_DCLK}$ | IOVDD $\geq$ 1.62 V | -11 +<br>(TFTSET-<br>UP *<br>$t_{HFCOR-}$<br>ECLK) | —   | —   | ns   |
|                                              |                 | IOVDD $\geq$ 3.0 V  | -9 +<br>(TFTSET-<br>UP *<br>$t_{HFCOR-}$<br>ECLK)  | —   | —   | ns   |

**Figure 4.6. EBI TFT Output Timing**

#### 4.1.28.2 QSPI DDR Mode

##### QSPI DDR Mode Timing (Location 0)

Timing is specified with voltage scaling disabled, PHY-mode, route location 0 only, TX DLL = 35, RX DLL = 70, 20-25 pF loading per GPIO, and slew rate for all GPIO set to 6, DRIVESTRENGTH = STRONG.

**Table 4.56. QSPI DDR Mode Timing (Location 0)**

| Parameter        | Symbol          | Test Condition           | Min                           | Typ | Max       | Unit |
|------------------|-----------------|--------------------------|-------------------------------|-----|-----------|------|
| Half SCLK period | T/2             | HFXO                     | $(1/F_{SCLK})^*$<br>0.4 - 0.4 | —   | —         | ns   |
|                  |                 | HFRCO, AUXHFRCO, USHFRCO | $(1/F_{SCLK})^*$<br>0.44      | —   | —         | ns   |
| Output valid     | t <sub>OV</sub> |                          | —                             | —   | T/2 - 5.0 | ns   |
| Output hold      | t <sub>OH</sub> |                          | T/2 - 39.4                    | —   | —         | ns   |

Certain alternate function locations may have non-interference priority. These locations will take precedence over any other functions selected on that pin (i.e. another alternate function enabled to the same pin inadvertently).

Some alternate functions may also have high speed priority on certain locations. These locations ensure the fastest possible paths to the pins for timing-critical signals.

The following table lists the alternate functions and locations with special priority.

**Table 5.22. Alternate Functionality Priority**

| Alternate Functionality | Location          | Priority                 |

### 6.3 BGA192 Package Marking

Figure 6.3. BGA192 Package Marking

The package marking consists of:

- P P P P P P P P P P – The part number designation.
- T T T T T T – A trace or manufacturing code. The first letter is the device revision.
- Y Y – The last 2 digits of the assembly year.
- W W – The 2-digit workweek when the device was assembled.

## 7.2 BGA152 PCB Land Pattern

Figure 7.2. BGA152 PCB Land Pattern Drawing

**Table 8.2. BGA120 PCB Land Pattern Dimensions**

| Dimension | Min | Nom  | Max |
|-----------|-----|------|-----|
| X         |     | 0.20 |     |
| C1        |     | 6.00 |     |
| C2        |     | 6.00 |     |
| E1        |     | 0.5  |     |
| E2        |     | 0.5  |     |

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on the IPC-7351 guidelines.
4. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 µm minimum, all the way around the pad.
5. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
6. The stencil thickness should be 0.125 mm (5 mils).
7. The ratio of stencil aperture to land pad size should be 1:1.
8. A No-Clean, Type-3 solder paste is recommended.
9. The recommended card reflow profile is per the JEDEC/IPC J-STD-020C specification for Small Body Components.

## 9. BGA112 Package Specifications

### 9.1 BGA112 Package Dimensions
