

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |                                                                                                                                                                       |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### 4.1.7.3 Current Consumption 1.8 V without DC-DC Converter

Unless otherwise indicated, typical conditions are: VREGVDD = AVDD = DVDD = 1.8 V. T = 25 °C. DCDC is off. Minimum and maximum values in this table represent the worst conditions across supply voltage and process variation at T = 25 °C.

**Table 4.9. Current Consumption 1.8 V without DC-DC Converter**

| Parameter                                                                                 | Symbol                 | Test Condition                                                        | Min | Typ | Max | Unit   |
|-------------------------------------------------------------------------------------------|------------------------|-----------------------------------------------------------------------|-----|-----|-----|--------|
| Current consumption in EM0 mode with all peripherals disabled                             | I <sub>ACTIVE</sub>    | 72 MHz HFRCO, CPU running Prime from flash                            | —   | 120 | —   | μA/MHz |
|                                                                                           |                        | 72 MHz HFRCO, CPU running while loop from flash                       | —   | 120 | —   | μA/MHz |

#### 4.1.11 Flash Memory Characteristics<sup>5</sup>

**Table 4.19. Flash Memory Characteristics<sup>5</sup>**

| Parameter                                   | Symbol               | Test Condition                                | Min   | Typ  | Max | Unit   |
|---------------------------------------------|----------------------|-----------------------------------------------|-------|------|-----|--------|
| Flash erase cycles before failure           | EC <sub>FLASH</sub>  |                                               | 10000 | —    | —   | cycles |
| Flash data retention                        | RET <sub>FLASH</sub> | T ≤ 85 °C                                     | 10    | —    | —   | years  |
|                                             |                      | T ≤ 125 °C                                    | 10    | —    | —   | years  |
| Word (32-bit) programming time              | t <sub>W_PROG</sub>  | Burst write, 128 words, average time per word | 20    | 26.2 | 32  | μs     |
|                                             |                      | Single word                                   | 59    | 68.7 | 83  | μs     |
| Page erase time <sup>4</sup>                | t <sub>PERASE</sub>  |                                               | 20    | 26.8 | 35  | ms     |
| Mass erase time <sup>1</sup>                | t <sub>MERASE</sub>  |                                               | 20    | 26.9 | 35  | ms     |
| Device erase time <sup>2 3</sup>            | t <sub>DERASE</sub>  | T ≤ 85 °C                                     | —     | 80.7 | 95  | ms     |
|                                             |                      | T ≤ 125 °C                                    | —     | 80.7 | 100 | ms     |
| Erase current <sup>6</sup>                  | I <sub>ERASE</sub>   | Page Erase                                    | —     | —    | 1.7 | mA     |
|                                             |                      | Mass or Device Erase                          | —     | —    | 2.1 | mA     |
| Write current <sup>6</sup>                  | I <sub>WRITE</sub>   |                                               | —     | —    | 3.9 | mA     |
| Supply voltage during flash erase and write | V <sub>FLASH</sub>   |                                               | 1.62  | —    | 3.6 | V      |

**Note:**

1. Mass erase is issued by the CPU and erases all flash.
2. Device erase is issued over the AAP interface and erases all flash, SRAM, the Lock Bit (LB) page, and the User data page Lock Word (ULW).
3. From setting the DEVICEERASE bit in AAP\_CMD to 1 until the ERASEBUSY bit in AAP\_STATUS is cleared to 0. Internal setup and hold times for flash control signals are included.
4. From setting the ERASEPAGE bit in MSC\_WRITECMD to 1 until the BUSY bit in MSC\_STATUS is cleared to 0. Internal setup and hold times for flash control signals are included.
5. Flash data retention information is published in the Quarterly Quality and Reliability Report.
6. Measured at 25 °C.

## 4.2 Typical Performance Curves

Typical performance curves indicate typical characterized performance under the stated conditions.

## 5. Pin Definitions

### 5.1 EFM32GG11B8xx in BGA192 Device Pinout

Figure 5.1. EFM32GG11B8xx in BGA192 Device Pinout

The following table provides package pin connections and general descriptions of pin functionality. For detailed information on the supported features for each GPIO pin, see [5.20 GPIO Functionality Table](#) or [5.21 Alternate Functionality Overview](#).

Table 5.1. EFM32GG11B8xx in BGA192 Device Pinout

| Pin Name | Pin(s) | Description | Pin Name | Pin(s) | Description |
|----------|--------|-------------|----------|--------|-------------|
| PA15     | A1     | GPIO        | PE15     | A2     | GPIO        |
| PE14     | A3     | GPIO        | PE13     | A4     | GPIO        |
| PE12     | A5     | GPIO        | PE11     | A6     | GPIO        |
| PE10     | A7     | GPIO        | PE9      | A8     | GPIO        |
| PE8      | A9     | GPIO        | PI9      | A10    | GPIO (5V)   |
| PI6      | A11    | GPIO (5V)   | PF14     | A12    | GPIO (5V)   |

## 5.2 EFM32GG11B8xx in BGA152 Device Pinout

**Figure 5.2. EFM32GG11B8xx in BGA152 Device Pinout**

The following table provides package pin connections and general descriptions of pin functionality. For detailed information on the supported features for each GPIO pin, see [5.20 GPIO Functionality Table](#) or [5.21 Alternate Functionality Overview](#).

## 6.2 BGA192 PCB Land Pattern

Figure 6.2. BGA192 PCB Land Pattern Drawing

### 6.3 BGA192 Package Marking

Figure 6.3. BGA192 Package Marking

The package marking consists of:

- P P P P P P P P P P – The part number designation.
- T T T T T T – A trace or manufacturing code. The first letter is the device revision.
- Y Y – The last 2 digits of the assembly year.
- W W – The 2-digit workweek when the device was assembled.
