What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

EBI Address Latch Enable Output Timing

Timing applies to multiplexed addressing modes D8A24ALE and D16A16ALE for both polarities. All numbers are based on route locations 0,1,2 only (with all EBI alternate functions using the same location at the same time). Timing is specified at 10% and 90% of IOVDD, 25 pF external loading, and slew rate for all GPIO set to 6.

Table 4.37. EBI Address Latch Enable Output Timing

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Output hold time, from trailing EBI_ALE edge to EBI_AD invalid[1] [2]	t_{OH_ALEn}	IOVDD ≥ 1.62 V	-22 + (ADDRHOLD * $t_{HFCORECLK}$)	—	—	ns
		IOVDD ≥ 3.0 V	-11 + (ADDRHOLD * $t_{HFCORECLK}$)	—	—	ns
Output setup time, from EBI_AD valid to leading EBI_ALE edge	t_{OSU_ALEn}	IOVDD ≥ 1.62 V	-12	—	—	ns
		IOVDD ≥ 3.0 V	-9	—	—	ns
EBI_ALEn pulse width[1]	t_{WIDTH_ALEn}	IOVDD ≥ 1.62 V	-4 + ((ADDRSETUP + 1) * $t_{\{\}HFCORECLK\{\}}$)	—	—	ns
		IOVDD ≥ 3.0 V	-3 + ((ADDRSETUP + 1) * $t_{\{\}HFCORECLK\{\}}$)	—	—	ns

Note:

1. The figure shows the timing for the case that the half strobe length functionality is not used, i.e. HALFALE=0. The trailing edge of EBI_ALEn can be moved to the left by setting HALFALE=1. This decreases the length of t_{WIDTH_ALEn} and increases the length of t_{OSU_ALEn} by $t_{HFCORECLK}$ - 1/2 * $t_{HFCLKNODIV}$.
2. The figure shows a write operation. For a multiplexed read operation the address hold time is controlled via the RDSETUP state instead of via the ADDRHOLD state.

EBI Ready/Wait Timing Requirements

Timing applies to both EBI_REn and EBI_WEn for all addressing modes and both polarities. All numbers are based on route locations 0,1,2 only (with all EBI alternate functions using the same location at the same time). Timing is specified at 10% and 90% of IOVDD, 25 pF external loading, and slew rate for all GPIO set to 6.

Table 4.41. EBI Ready/Wait Timing Requirements

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
