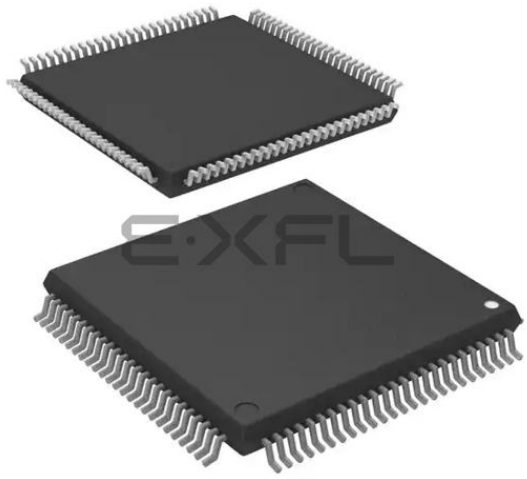
Renesas Electronics America Inc - M30302FCPGP#U3 Datasheet



Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Not For New Designs
Core Processor	M16C/60
Core Size	16-Bit
Speed	16MHz
Connectivity	I²C, IEBus, UART/USART
Peripherals	DMA, POR, PWM, WDT
Number of I/O	85
Program Memory Size	128KB (128K x 8)
Program Memory Type	FLASH
EEPROM Size	4K x 8
RAM Size	5K x 8
Voltage - Supply (Vcc/Vdd)	2.7V ~ 5.5V
Data Converters	A/D 18x10b
Oscillator Type	External
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	100-LQFP
Supplier Device Package	100-LFQFP (14x14)
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/m30302fcpgp-u3

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

   "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

Table 1.3 Product List (2) **As of March 2007**

Part No.	ROM Capacity	RAM Capacity	package code (1)	Remarks
M30302FAPFP	96 K + 4 Kbytes	5 Kbytes	PRQP0100JB-A	Flash memory version(2)
M30302FAPGP			PLQP0100KB-A	
M30302FCPFP	128 K + 4 Kbytes		PRQP0100JB-A	
M30302FCPGP			PLQP0100KB-A	
M30302FEPFP	192 K + 4 Kbytes	6 Kbytes	PRQP0100JB-A	
M30302FEPGP			PLQP0100KB-A	
M30302SPFP	-	6 Kbytes	PRQP0100JB-A	ROM-less version
M30302SPGP			PLQP0100KB-A	

(D): Under development
(P): Under planning
NOTES:
1. Previous package codes are as follows.
   PRQP0100JB-A : 100P6S-A,
   PLQP0100KB-A : 100P6Q-A
2. Block A (4-Kbytes space) is available in flash memory version.

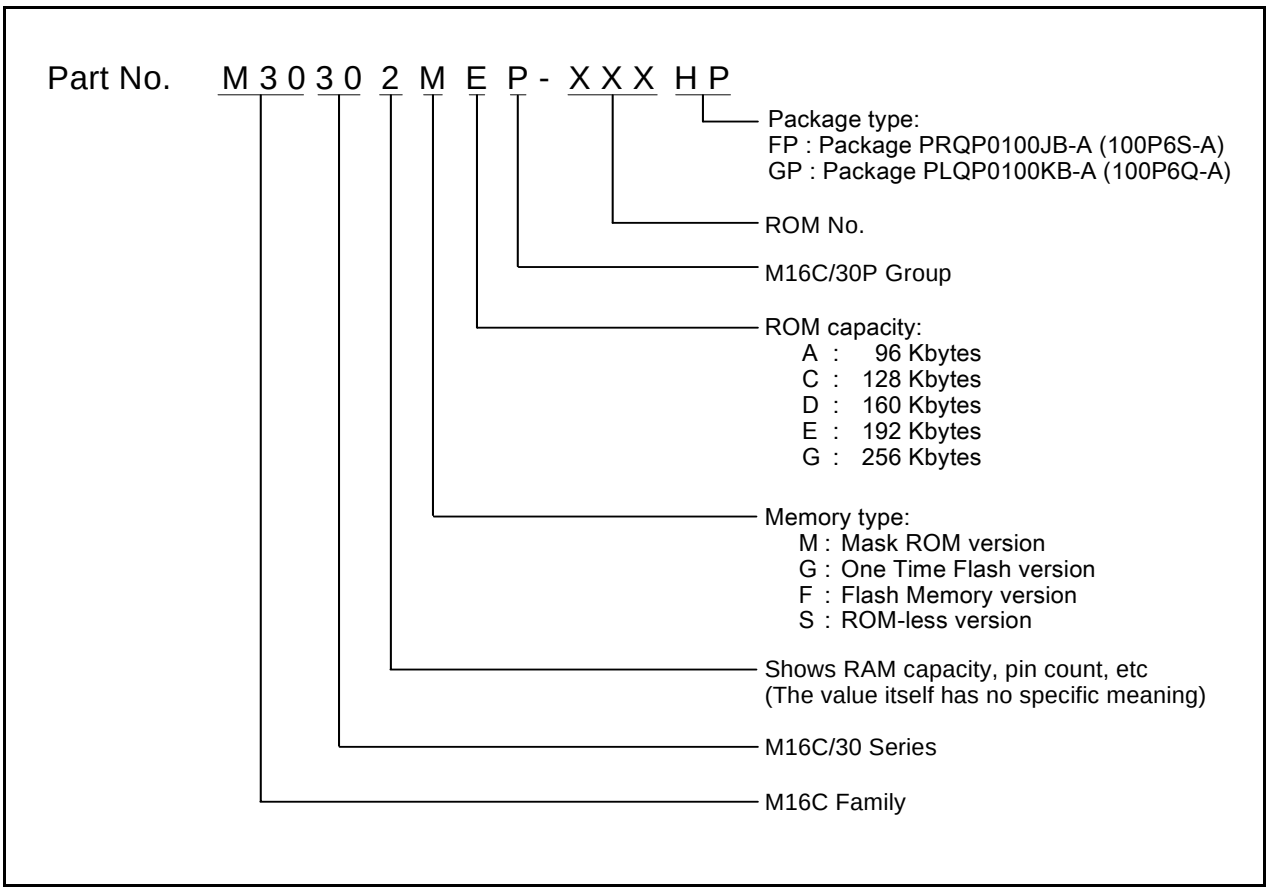


Figure 1.2 Part No., Memory Size, and Package

1.5 Pin Configuration

Figures 1.5 to 1.6 show the pin configurations (top view).

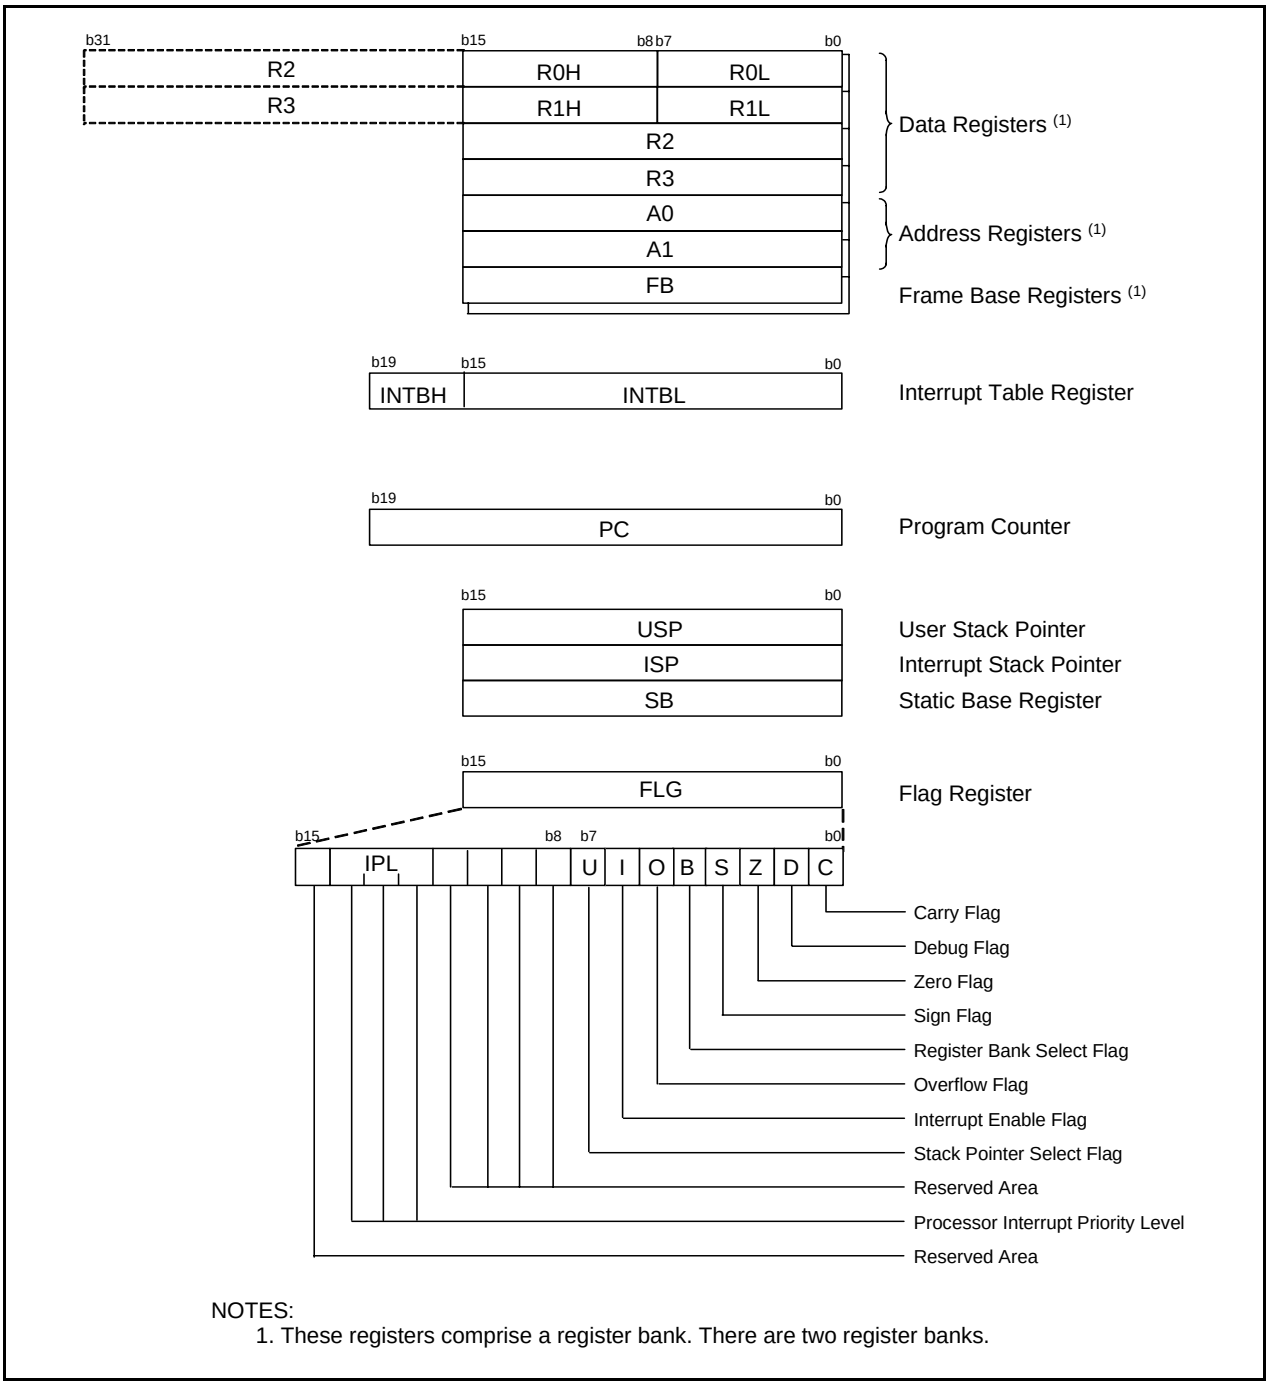
2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU registers. The CPU has 13 registers. Of these, R0, R1, R2, R3, A0, A1 and FB comprise a register bank. There are two register banks.



NOTES:
1. These registers comprise a register bank. There are two register banks.

Figure 2.1 Central Processing Unit Register

2.1 Data Registers (R0, R1, R2 and R3)

The R0 register consists of 16 bits, and is used mainly for transfers and arithmetic/logic operations. R1 to R3 are the same as R0.

The R0 register can be separated between high (R0H) and low (R0L) for use as two 8-bit data registers.

R1H and R1L are the same as R0H and R0L. Conversely, R2 and R0 can be combined for use as a 32-bit data register (R2R0). R3R1 is the same as R2R0.

2.2 Address Registers (A0 and A1)

The register A0 consists of 16 bits, and is used for address register indirect addressing and address register relative addressing. They also are used for transfers and logic/logic operations. A1 is the same as A0.
In some instructions, registers A1 and A0 can be combined for use as a 32-bit address register (A1A0).

2.3 Frame Base Register (FB)

FB is configured with 16 bits, and is used for FB relative addressing.

2.4 Interrupt Table Register (INTB)

INTB is configured with 20 bits, indicating the start address of an interrupt vector table.

2.5 Program Counter (PC)

PC is configured with 20 bits, indicating the address of an instruction to be executed.

2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

Stack pointer (SP) comes in two types: USP and ISP, each configured with 16 bits.
Your desired type of stack pointer (USP or ISP) can be selected by the U flag of FLG.

2.7 Static Base Register (SB)

SB is configured with 16 bits, and is used for SB relative addressing.

2.8 Flag Register (FLG)

FLG consists of 11 bits, indicating the CPU status.

2.8.1 Carry Flag (C Flag)

This flag retains a carry, borrow, or shift-out bit that has occurred in the arithmetic/logic unit.

2.8.2 Debug Flag (D Flag)

The D flag is used exclusively for debugging purpose. During normal use, it must be set to “0”.

2.8.3 Zero Flag (Z Flag)

This flag is set to “1” when an arithmetic operation resulted in 0; otherwise, it is “0”.

2.8.4 Sign Flag (S Flag)

This flag is set to “1” when an arithmetic operation resulted in a negative value; otherwise, it is “0”.

2.8.5 Register Bank Select Flag (B Flag)

Register bank 0 is selected when this flag is “0” ; register bank 1 is selected when this flag is “1”.

2.8.6 Overflow Flag (O Flag)

This flag is set to “1” when the operation resulted in an overflow; otherwise, it is “0”.

2.8.7 Interrupt Enable Flag (I Flag)

This flag enables a maskable interrupt.
Maskable interrupts are disabled when the I flag is “0”, and are enabled when the I flag is “1”. The I flag is cleared to “0” when the interrupt request is accepted.

NOTES:
1. The blank areas are reserved and cannot be accessed by users.
2. At hardware reset, the register is as follows:
   - "00000000b" where "L" is inputted to the CNVSS pin
   - "00000010b" where "H" is inputted to the CNVSS pin

   At software reset, the register is as follows:
   - "00000000b" where the PM01 to PM00 bits in the PM0 register are "00b" (single-chip mode).
   - "00000010b" where the PM01 to PM00 bits in the PM0 register are "01b" (memory expansion mode) or "11b" (microprocessor mode).

f(XIN)	Main Clock Input Oscillation Frequency (4)	Vcc=3.0V to 5.5V	0		16	MHz
		Vcc=2.7V to 3.0V	0		20×V_{CC1}−44	MHz
f(XCIN)	Sub-Clock Oscillation Frequency			32.768	50	kHz
f(BCLK)	CPU Operation Clock		0		16	MHz

NOTES:
1. Referenced to V_{CC1} = V_{CC2} = 2.7 to 5.5V at T_{opr} = −20 to 85°C / −40 to 85°C unless otherwise specified.
2. The Average Output Current is the mean value within 100ms.
3. The total $I_{OL(peak)}$ for ports P0, P1, P2, P8_6, P8_7, P9 and P10 must be 80mA max. The total $I_{OL(peak)}$ for ports P3, P4, P5, P6, P7 and P8_0 to P8_4 must be 80mA max. The total $I_{OH(peak)}$ for ports P0, P1, and P2 must be −40mA max. The total $I_{OH(peak)}$ for ports P3, P4 and P5 must be −40mA max. The total $I_{OH(peak)}$ for ports P6, P7, and P8_0 to P8_4 must be −40mA max.
   The total $I_{OH(peak)}$ for ports P8_6, P8_7 and P9 must be −40mA max. Set Average Output Current to 1/2 of peak.
4. Relationship between main clock oscillation frequency, and supply voltage.

Main clock input oscillation frequency

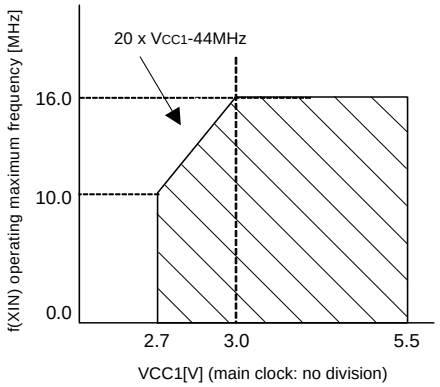

Table 5.6 One Time Flash Version Electrical Characteristics (1)

Symbol	Parameter	Standard			Unit
		Min.	Typ.	Max.	
–	Program Endurance			1	cycle
–	Word Program Time (V_{CC1}=5.0V)		50	500	µs
tPS	One Time Flash Memory Circuit Stabilization Wait Time			15	µs
–	Data Hold Time (4)	10			year

NOTES:
1. Referenced to V_{CC1}=4.5 to 5.5V, 3.0 to 3.6V at Topr = 0 to 60 °C (U3, U5) unless otherwise specified.
2. Topr = -40 to 85 °C (U3) / -20 to 85 °C (U5).

Table 5.7 One Time Flash Version Program Voltage and Read Operation Voltage Characteristics

Flash Program Voltage	Flash Read Operation Voltage
V_{CC1} = 3.3 ± 0.3 V or 5.0 ± 0.5 (T_{opr} = 0°C to 60°C)	V_{CC1}=2.7 to 5.5 V (T_{opr} = -40°C to 85°C (U3) -20°C to 85°C (U5))

$V_{CC1}=V_{CC2}=5V$

Switching Characteristics
(V_{CC1} = V_{CC2} = 5V, V_{SS} = 0V, at T_{opr} = –20 to 85°C / –40 to 85°C unless otherwise specified)

Table 5.26 Memory Expansion and Microprocessor Modes (for 1 wait setting and external area access)

Symbol	Parameter		Standard		Unit
			Min.	Max.	
$t_{d(BCLK-AD)}$	Address Output Delay Time	See **Figure 5.2**		25	ns
$t_{h(BCLK-AD)}$	Address Output Hold Time (in relation to BCLK)		–3		ns
$t_{h(RD-AD)}$	Address Output Hold Time (in relation to RD)		0		ns
$t_{h(WR-AD)}$	Address Output Hold Time (in relation to WR)		(NOTE 2)		ns
$t_{d(BCLK-CS)}$	Chip Select Output Delay Time			25	ns
$t_{h(BCLK-CS)}$	Chip Select Output Hold Time (in relation to BCLK)		–3		ns
$t_{d(BCLK-ALE)}$	ALE Signal Output Delay Time			15	ns
$t_{h(BCLK-ALE)}$	ALE Signal Output Hold Time		–4		ns
$t_{d(BCLK-RD)}$	RD Signal Output Delay Time			25	ns
$t_{h(BCLK-RD)}$	RD Signal Output Hold Time		0		ns
$t_{d(BCLK-WR)}$	WR Signal Output Delay Time			25	ns
$t_{h(BCLK-WR)}$	WR Signal Output Hold Time		0		ns
$t_{d(BCLK-DB)}$	Data Output Delay Time (in relation to BCLK)			40	ns
$t_{h(BCLK-DB)}$	Data Output Hold Time (in relation to BCLK) (3)		4		ns
$t_{d(DB-WR)}$	Data Output Delay Time (in relation to WR)		(NOTE 1)		ns
$t_{h(WR-DB)}$	Data Output Hold Time (in relation to WR)(3)		(NOTE 2)		ns
$t_{d(BCLK-HLDA)}$	HLDA Output Delay Time			40	ns

NOTES:

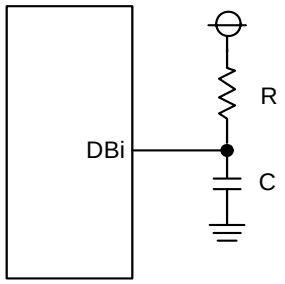
1. Calculated according to the BCLK frequency as follows:

$$\frac{(n-0.5)\times 10^9}{f(BCLK)} - 40[ns]$$ n is “1” for 1-wait setting, f(BCLK) is 12.5MHz or less.

2. Calculated according to the BCLK frequency as follows:

$$\frac{0.5\times 10^9}{f(BCLK)} - 10[ns]$$

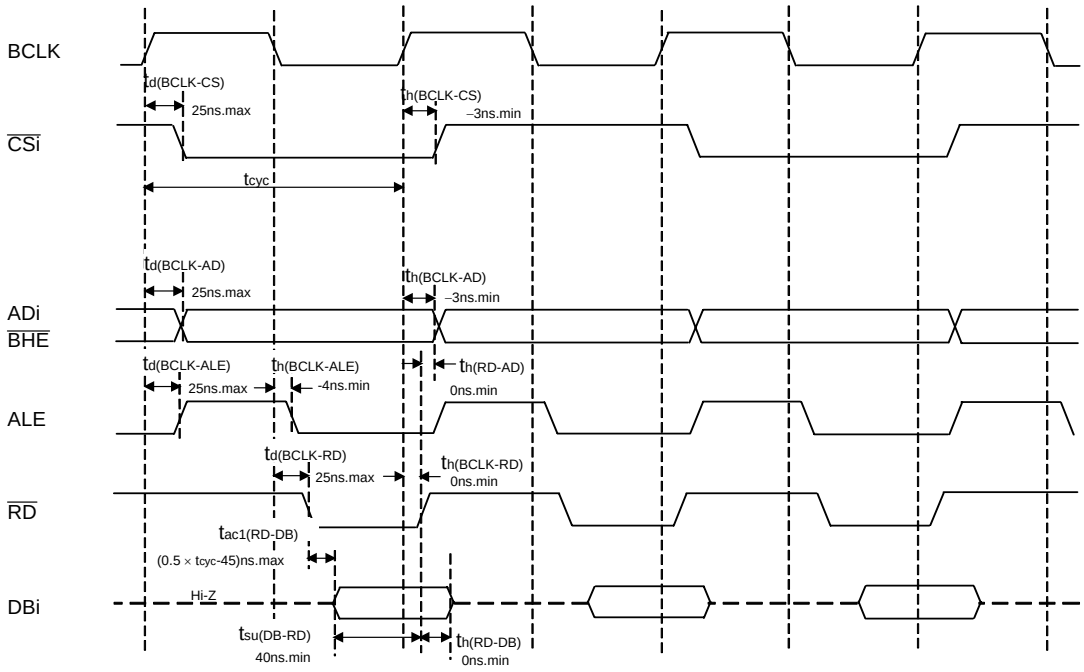
3. This standard value shows the timing when the output is off, and does not show hold time of data bus.
Hold time of data bus varies with capacitor volume and pull-up (pull-down) resistance value.
Hold time of data bus is expressed in
t = –CR X ln (1–V_{OL} / V_{CC1})
by a circuit of the right figure.
For example, when V_{OL} = 0.2V_{CC1}, C = 30pF, R = 1kΩ, hold time of output ”L” level is
t = –30pF X 1kΩ X ln(1–0.2V_{CC1} / V_{CC1})
= 6.7ns.



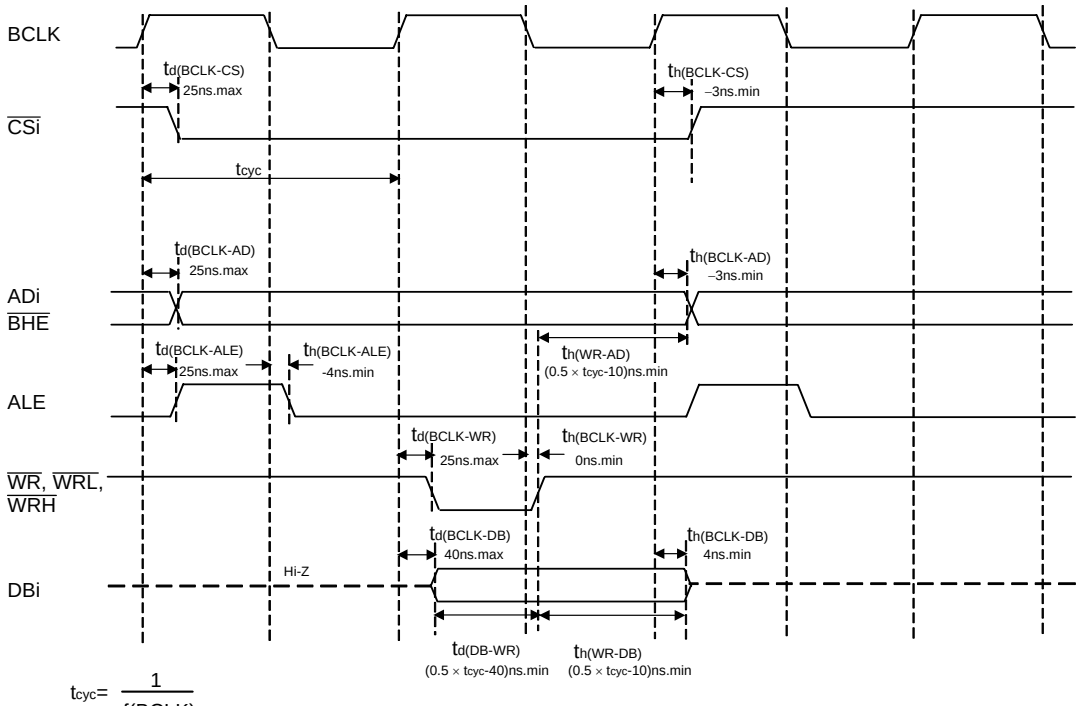
Memory Expansion Mode, Microprocessor Mode
(For setting with no wait**)**

$V_{CC1}=V_{CC2}=5V$

Read timing



Write timing



$$t_{cyc}=\frac{1}{f(BCLK)}$$

Measuring conditions
· $V_{CC1}=V_{CC2}=5V$
· Input timing voltage : $V_{IL}=0.8V$, $V_{IH}=2.0V$
· Output timing voltage : $V_{OL}=0.4V$, $V_{OH}=2.4V$
