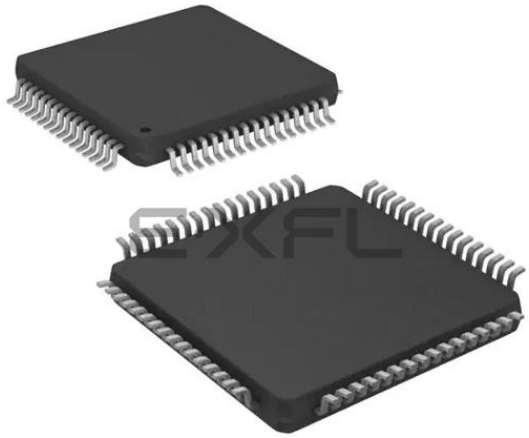
Microchip Technology - PIC32MZ1024ECH064T-I/PT Datasheet



Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	MIPS32® microAptiv™
Core Size	32-Bit Single-Core
Speed	200MHz
Connectivity	CANbus, Ethernet, I²C, SPI, SQI, UART/USART, USB OTG
Peripherals	Brown-out Detect/Reset, DMA, I²S, POR, PWM, WDT
Number of I/O	53
Program Memory Size	1MB (1M x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	512K x 8
Voltage - Supply (Vcc/Vdd)	2.3V ~ 3.6V
Data Converters	A/D 24x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	64-TQFP
Supplier Device Package	64-TQFP (10x10)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic32mz1024ech064t-i-pt

TABLE 7-3: INTERRUPT REGISTER MAP (CONTINUED)

		15:0	VOFF<15:1>															—	0000

Legend: x = unknown value on Reset; — = unimplemented, read as '0'. Reset values are shown in hexadecimal.

Note 1: All registers in this table with the exception of the OFFx registers, have corresponding CLR, SET, and INV registers at their virtual addresses, plus offsets of 0x4, 0x8 and 0xC, respectively. See **Section 12.2 "CLR, SET, and INV Registers"** for more information.
2: This bit or register is not available on 64-pin devices.
3: This bit or register is not available on devices without a CAN module.
4: This bit or register is not available on 100-pin devices.
5: Bits 31 and 30 are not available on 64-pin and 100-pin devices; bits 29 through 14 are not available on 64-pin devices.
6: Bits 31, 30, 29, and bits 5 through 0 are not available on 64-pin and 100-pin devices; bit 31 is not available on 124-pin devices; bit 22 is not available on 64-pin devices.
7: This bit or register is not available on devices without a Crypto module.
8: This bit or register is not available on 124-pin devices.

REGISTER 9-2: PRESTAT: PREFETCH MODULE STATUS REGISTER

Bit Range	Bit 31/23/15/7	Bit 30/22/14/6	Bit 29/21/13/5	Bit 28/20/12/4	Bit 27/19/11/3	Bit 26/18/10/2	Bit 25/17/9/1	Bit 24/16/8/0
31:24	U-0	U-0	U-0	U-0	R/W-0, HS	R/W-0, HS	U-0	U-0
	—	—	—	—	PFMDED	PFMSEC	—	—
23:16	U-0	U-0	U-0	U-0	U-0	U-0	U-0	U-0
	—	—	—	—	—	—	—	—
15:8	U-0	U-0	U-0	U-0	U-0	U-0	U-0	U-0
	—	—	—	—	—	—	—	—
7:0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0	R/W-0
	PFMSECCNT<7:0>							

Legend:		HS = Hardware Set	
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-28 **Unimplemented:** Read as '0'

bit 27 **PFMDED:** Flash Double-bit Error Detected (DED) Status bit
This bit is set in hardware and can only be cleared (i.e., set to '0') in software.
1 = A DED error has occurred
0 = A DED error has not occurred

bit 26 **PFMSEC:** Flash Single-bit Error Corrected (SEC) Status bit
1 = A SEC error occurred when PFMSECCNT<7:0> was equal to '0'
0 = A SEC error has not occurred

bit 25-8 **Unimplemented:** Read as '0'

bit 7-0 **PFMSECCNT<7:0>:** Flash SEC Count bits
11111111 - 00000000 = SEC count
This field decrements by one each time an SEC error occurs. It will hold at zero on the two-hundred and fifty-sixth error. When an SEC error occurs, when PFMSECCNT = 0, the PFMSEC status bit is set. If PFMSECEN is also set, an interrupt is generated.

Note: These bits count all SEC errors and are not limited to SEC errors on unique addresses.

TABLE 10-3: DMA CHANNEL 0 THROUGH CHANNEL 7 REGISTER MAP (CONTINUED)

7:0	U-0	R-0	R-0	R-0	R-0	R-0	R-0	R-0
	—	RXCNT<6:0>						

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-29 **Unimplemented:** Read as '0'

bit 28-24 **NAKLIM<4:0>:** Endpoint 0 NAK Limit bits

The number of frames/microframes (Hi-Speed transfers) after which Endpoint 0 should time-out on receiving a stream of NAK responses.

bit 23-22 **SPEED<1:0>:** Operating Speed Control bits
11 = Low-Speed
10 = Full-Speed
01 = Hi-Speed
00 = Reserved

bit 21-7 **Unimplemented:** Read as '0'

bit 6-0 **RXCNT<6:0>:** Receive Count bits

The number of received data bytes in the Endpoint 0 FIFO. The value returned changes as the contents of the FIFO change and is only valid while RXPKTRDY is set.

REGISTER 11-29: USBLPMR2: USB LINK POWER MANAGEMENT CONTROL REGISTER 2

bit 0 **LPMSTIF:** LPM STALL Interrupt Flag bit

When in *Device mode*:

1 = A LPM transaction was received and the USB Module responded with a STALL

0 = No Stall condition

When in *Host mode*:

1 = A LPM transaction was transmitted and the device responded with a STALL

0 = No Stall condition

12.0 I/O PORTS

Note: This data sheet summarizes the features of the PIC32MZ Embedded Connectivity (EC) Family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 12. "I/O Ports"** (DS60001120), which is available from the *Documentation > Reference Manual* section of the Microchip PIC32 web site (www.microchip.com/pic32).

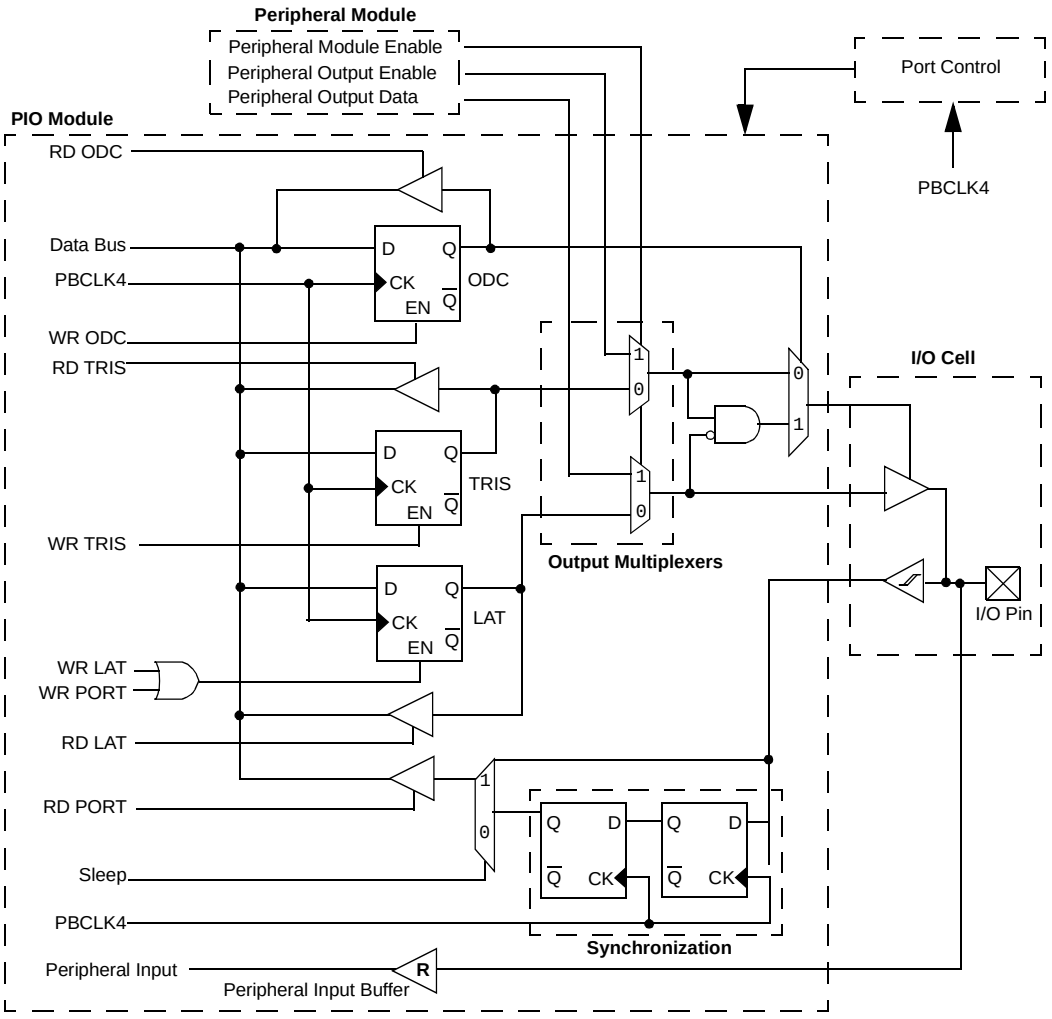
General purpose I/O pins are the simplest of peripherals. They allow the PIC32MZ EC family device to monitor and control other devices. To add flexibility and functionality, some pins are multiplexed with alternate function(s). These functions depend on which peripheral features are on the device. In general, when a peripheral is functioning, that pin may not be used as a general purpose I/O pin.

Key features of the I/O ports include:

- Individual output pin open-drain enable/disable
- Individual input pin weak pull-up and pull-down
- Monitor selective inputs and generate interrupt when change in pin state is detected
- Operation during Sleep and Idle modes
- Fast bit manipulation using CLR, SET, and INV registers

Figure 12-1 illustrates a block diagram of a typical multiplexed I/O port.

FIGURE 12-1: BLOCK DIAGRAM OF A TYPICAL MULTIPLEXED PORT STRUCTURE



Legend: R = Peripheral input buffer types may vary. Refer to Table 1-1 for peripheral details.

Note: This block diagram is a general representation of a shared port/peripheral structure for illustration purposes only. The actual structure for any specific port/peripheral combination may be different than shown here.

The timer source for each Output Compare module depends on the setting of the OCACLK bit in the CFGCON register. The available configurations are shown in Table 18-1.

TABLE 18-1: TIMER SOURCE CONFIGURATIONS

Output Compare Module	Timerx	Timery
OCACLK (CFGCON<16>) = 0		
OC1 • • • OC9	Timer2 • • • Timer 2	Timer3 • • • Timer 3
OCACLK (CFGCON<16>) = 1		
OC1	Timer4	Timer5
OC2	Timer4	Timer5
OC3	Timer4	Timer5
OC4	Timer2	Timer3
OC5	Timer2	Timer3
OC6	Timer2	Timer3
OC7	Timer6	Timer7
OC8	Timer6	Timer7
OC9	Timer6	Timer7

19.0 SERIAL PERIPHERAL INTERFACE (SPI) AND INTER-IC SOUND (I^2S)

Note: This data sheet summarizes the features of the PIC32MZ Embedded Connectivity (EC) Family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 23. "Serial Peripheral Interface (SPI)"** (DS60001106), which is available from the *Documentation > Reference Manual* section of the Microchip PIC32 web site (www.microchip.com/pic32).

The SPI/I^2S module is a synchronous serial interface that is useful for communicating with external peripherals and other microcontroller devices, as well as digital audio devices. These peripheral devices may be Serial EEPROMs, Shift registers, display drivers, Analog-to-Digital Converters (ADC), etc.

The SPI/I^2S module is compatible with Motorola® SPI and SIOP interfaces.

The following are some of the key features of the SPI module:

- Master and Slave modes support
- Four different clock formats
- Enhanced Framed SPI protocol support
- User-configurable 8-bit, 16-bit and 32-bit data width
- Separate SPI FIFO buffers for receive and transmit
  - FIFO buffers act as 4/8/16-level deep FIFOs based on 32/16/8-bit data width
- Programmable interrupt event on every 8-bit, 16-bit and 32-bit data transfer
- Operation during Sleep and Idle modes
- Audio Codec Support:
  - I^2S protocol
  - Left-justified
  - Right-justified
  - PCM

-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-0 **TXDATA<31:0>:** Transmit Command Data bits

Data is loaded into this register before being transmitted. Just prior to the beginning of a data transfer, the data in TXDATA is loaded into the shift register (SFDR).

Multiple writes to TXDATA can occur even while a transfer is already in progress. There can be a maximum of eight commands that can be queued.

REGISTER 20-11: SQI1RXDATA: SQI RECEIVE DATA BUFFER REGISTER

Bit Range	Bit 31/23/15/7	Bit 30/22/14/6	Bit 29/21/13/5	Bit 28/20/12/4	Bit 27/19/11/3	Bit 26/18/10/2	Bit 25/17/9/1	Bit 24/16/8/0

	RXDATA<7:0>							

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-0 **RXDATA<31:0>:** Receive Data Buffer bits

At the end of a data transfer, the data in the shift register is loaded into the RXDATA register. This register works like a FIFO. The depth of the receive buffer is eight words. These bits indicate the starting write block address for an erase operation.

	GCEN	STREN	ACKDT	ACKEN	RCEN	PEN	RSEN	SEN

Legend:	HC = Cleared in Hardware		
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-23 **Unimplemented:** Read as '0'

bit 22 **PCIE:** Stop Condition Interrupt Enable bit (I²C Slave mode only)
- 1 = Enable interrupt on detection of Stop condition
- 0 = Stop detection interrupts are disabled

bit 21 **SCIE:** Start Condition Interrupt Enable bit (I²C Slave mode only)
- 1 = Enable interrupt on detection of Start or Restart conditions
- 0 = Start detection interrupts are disabled

bit 20 **BOEN:** Buffer Overwrite Enable bit (I²C Slave mode only)
- 1 = I2CxRCV is updated and $\overline{\text{ACK}}$ is generated for a received address/data byte, ignoring the state of the I2COV bit (I2CxSTAT<6>)only if the RBF bit (I2CxSTAT<2>) = 0
- 0 = I2CxRCV is only updated when the I2COV bit (I2CxSTAT<6>) is clear

bit 19 **SDAHT:** SDA Hold Time Selection bit
- 1 = Minimum of 300 ns hold time on SDA after the falling edge of SCL
- 0 = Minimum of 100 ns hold time on SDA after the falling edge of SCL

bit 18 **SBCDE:** Slave Mode Bus Collision Detect Enable bit (I²C Slave mode only)
- 1 = Enable slave bus collision interrupts
- 0 = Slave bus collision interrupts are disabled

bit 18 **AHEN:** Address Hold Enable bit (Slave mode only)
- 1 = Following the 8th falling edge of SCL for a matching received address byte; SCKREL bit will be cleared and the SCL will be held low.
- 0 = Address holding is disabled

bit 16 **DHEN:** Data Hold Enable bit (I²C Slave mode only)
- 1 = Following the 8th falling edge of SCL for a received data byte; slave hardware clears the SCKREL bit and SCL is held low
- 0 = Data holding is disabled

bit 15 **ON:** I²C Enable bit
- 1 = Enables the I²C module and configures the SDA and SCL pins as serial port pins
- 0 = Disables the I²C module; all I²C pins are controlled by PORT functions

bit 14 **Unimplemented:** Read as '0'

bit 13 **SIDL:** Stop in Idle Mode bit
- 1 = Discontinue module operation when device enters Idle mode
- 0 = Continue module operation in Idle mode

28.0 PIPELINED ANALOG-TO-DIGITAL CONVERTER (ADC)

Note: This data sheet summarizes the features of the PIC32MZ Embedded Connectivity (EC) Family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 18. "12-bit Pipelined Analog-to-Digital Converter (ADC)"** (DS60001194), which is available from the *Documentation > Reference Manual* section of the Microchip PIC32 web site (www.microchip.com/pic32).

The PIC32MZ EC Pipelined Analog-to-Digital Converter (ADC) includes the following features:

- 10-bit resolution
- Six-stage conversion pipeline
- External voltage reference input pins
- Six Sample and Hold (S&H) circuits, SH0 - SH5:
  - Five dedicated S&H circuits with individual input selection and individual conversion trigger selection for high-speed conversions
  - One shared S&H circuit with automatic Input Scan mode and common conversion trigger selection
- Up to 48 analog input sources, in addition to the internal voltage reference and an internal temperature sensor
- 32-bit conversion result registers with dedicated interrupts:
  - Conversion result can be formatted as unsigned or signed fractional or integer data
- Six digital comparators with dedicated interrupts:
  - Multiple comparison options
  - Assignable to specific analog input
- Six oversampling filters with dedicated interrupts:
  - Provides increased resolution
  - Assignable to specific analog input
- Operation during Sleep and Idle modes

Besides the analog inputs that can be converted, there are two analog input pins for external voltage reference connections. These voltage reference inputs can be shared with other analog input pins, and can also be used by other analog module references.

The analog inputs are connected through multiplexers (MUXs) to the S&H circuits. Each of the dedicated S&H circuits, is assigned to analog inputs, and can optionally use another analog input in a differential configuration. The dedicated S&H circuits are used for high-speed and precise sampling/conversion of time sensitive or transient inputs.

The sixth S&H circuit, SH5, can be used in Input Scan mode and is connected to all the available analog inputs on a device, along with internal voltage reference and the temperature sensor signals. Input Scan mode sequentially converts user-specified analog input sources. The control registers specify the analog input sources that are included in the scanning sequence.

A simplified block diagram of the ADC1 module is illustrated in Figure 28-1. Diagrams for the Dedicated and Shared ADC modules are provided in Figure 28-2 and Figure 28-3, respectively.

R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-16 **Unimplemented:** Read as '0'

bit 15-0 **MWTD<15:0>:** MII Management Write Data bits

When written, a MII Management write cycle is performed using the 16-bit data and the preconfigured PHY and Register addresses from the EMAC1MADR register.

Note: Both 16-bit and 32-bit accesses are allowed to these registers (including the SET, CLR and INV registers). 8-bit accesses are not allowed and are ignored by the hardware.

-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 31-16 **Unimplemented:** Read as '0'

bit 15-0 **MRDD<15:0>:** MII Management Read Data bits

Following a MII Management Read Cycle, the 16-bit data can be read from this location.

Note: Both 16-bit and 32-bit accesses are allowed to these registers (including the SET, CLR and INV registers). 8-bit accesses are not allowed and are ignored by the hardware.

31.0 COMPARATOR

Note: This data sheet summarizes the features of the PIC32MZ Embedded Connectivity (EC) Family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 19. "Comparator"** (DS60001110), which is available from the *Documentation > Reference Manual* section of the Microchip PIC32 web site (www.microchip.com/pic32).

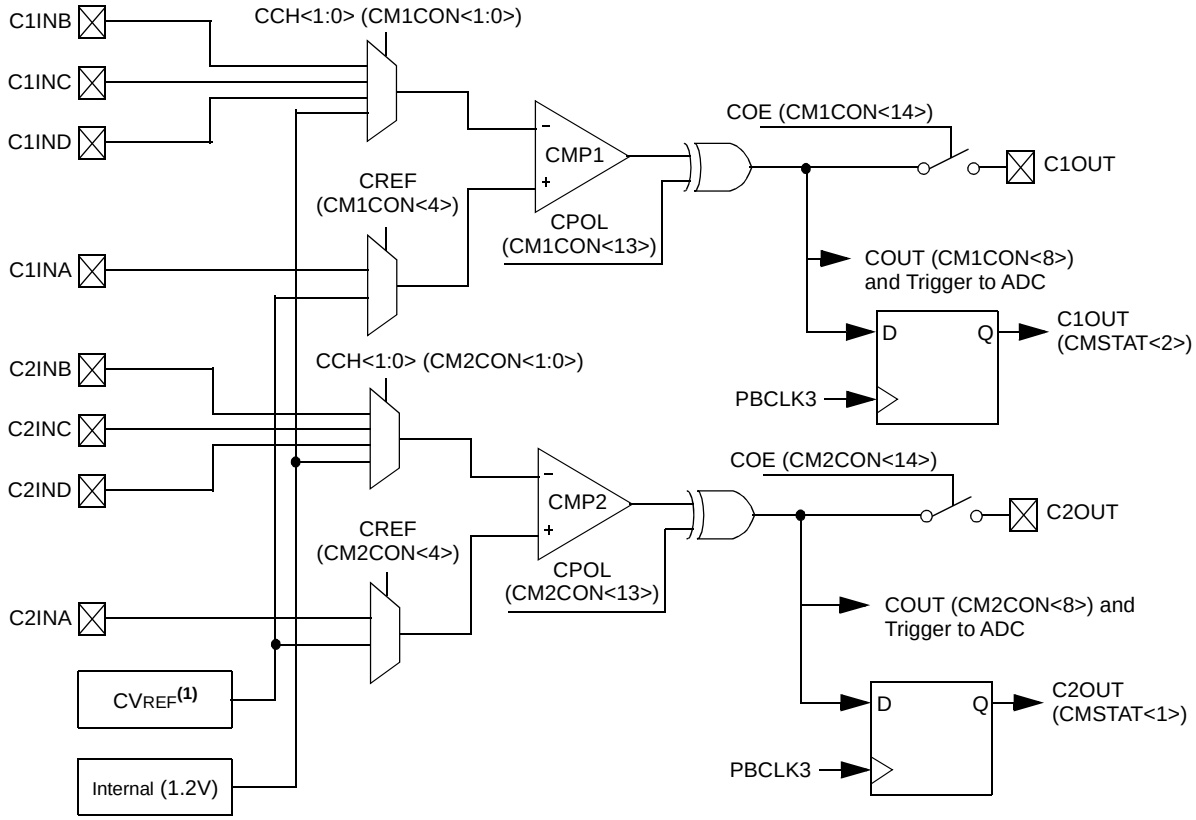
The Analog Comparator module consists of two comparators that can be configured in a variety of ways.

Key features of the Analog Comparator module are:

- Differential inputs
- Rail-to-rail operation
- Selectable output polarity
- Selectable inputs:
  - Analog inputs multiplexed with I/O pins
  - On-chip internal absolute voltage reference
  - Comparator voltage reference (CV_{REF})
- Selectable interrupt generation

A block diagram of the comparator module is illustrated in Figure 31-1.

FIGURE 31-1: COMPARATOR BLOCK DIAGRAM



Note 1: Internally connected. See **Section 32.0 "Comparator Voltage Reference (CV_{REF})"** for more information.

38.0 AC AND DC CHARACTERISTICS GRAPHS

Note: The graphs provided are a statistical summary based on a limited number of samples and are provided for design guidance purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore, outside the warranted range.

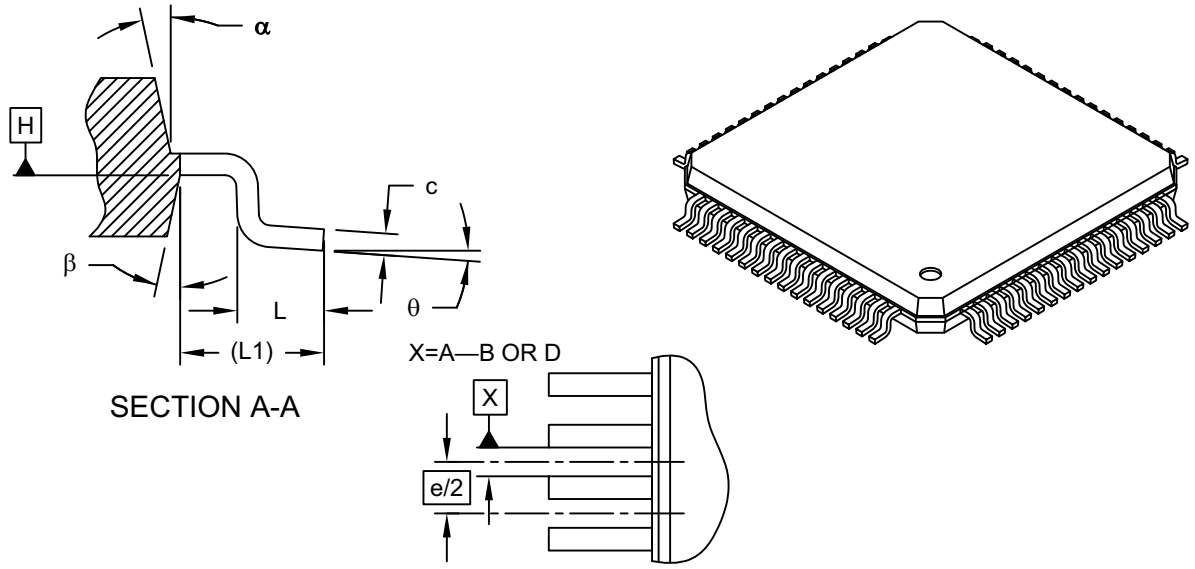
64-Lead Plastic Thin Quad Flatpack (PT)-10x10x1 mm Body, 2.00 mm Footprint [TQFP]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging



Units		MILLIMETERS		
Dimension Limits		MIN	NOM	MAX
Number of Leads	N		64	
Lead Pitch	e		0.50 BSC	
Overall Height	A	-	-	1.20
Molded Package Thickness	A2	0.95	1.00	1.05
Standoff	A1	0.05	-	0.15
Foot Length	L	0.45	0.60	0.75
Footprint	L1		1.00 REF	
Foot Angle	ϕ	0°	3.5°	7°
Overall Width	E		12.00 BSC	
Overall Length	D		12.00 BSC	
Molded Package Width	E1		10.00 BSC	
Molded Package Length	D1		10.00 BSC	
Lead Thickness	c	0.09	-	0.20
Lead Width	b	0.17	0.22	0.27
Mold Draft Angle Top	α	11°	12°	13°
Mold Draft Angle Bottom	β	11°	12°	13°

Notes:

1. Pin 1 visual index feature may vary, but must be located within the hatched area.
2. Chamfers at corners are optional; size may vary.
3. Dimensions D1 and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.25mm per side.
4. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.
REF: Reference Dimension, usually without tolerance, for information purposes only.
