Understanding Embedded - Microprocessors

Embedded microprocessors are specialized computing chips designed to perform specific tasks within an embedded system. Unlike general-purpose microprocessors found in personal computers, embedded microprocessors are tailored for dedicated functions within larger systems, offering optimized performance, efficiency, and reliability. These microprocessors are integral to the operation of countless electronic devices, providing the computational power necessary for controlling processes, handling data, and managing communications.

Applications of Embedded - Microprocessors

Embedded microprocessors are utilized across a broad spectrum of applications, making them indispensable in

1 Overview

The MPC860 power quad integrated communications controller (PowerQUICC™) is a versatile one-chip integrated microprocessor and peripheral combination designed for a variety of controller applications. It particularly excels in communications and networking systems. The PowerQUICC unit is referred to as the MPC860 in this hardware specification.

The MPC860 implements Power Architecture™ technology and contains a superset of Freescale's MC68360 quad integrated communications controller (QUICC), referred to here as the QUICC, RISC communications proccessor module (CPM). The CPU on the MPC860 is a 32-bit core built on Power Architecture technology that incorporates memory management units (MMUs) and instruction and data caches.. The CPM from the MC68360 QUICC has been enhanced by the addition of the inter-integrated controller (I^2C) channel. The memory controller has been enhanced, enabling the MPC860 to support any type of memory, including high-performance memories and new types of DRAMs. A PCMCIA socket controller supports up to two sockets. A real-time clock has also been integrated.

Table 1 shows the functionality supported by the MPC860 family.

2. MPC855T User's Manual (MPC855TUM, Rev. 1)

  - Allows dynamic changes
  - Can be internally connected to six serial channels (four SCCs and two SMCs)
- Parallel interface port (PIP)
  - Centronics interface support
  - Supports fast connection between compatible ports on the MPC860 or the MC68360
- PCMCIA interface
  - Master (socket) interface, release 2.1 compliant
  - Supports two independent PCMCIA sockets
  - Supports eight memory or I/O windows
- Low power support
  - Full on—all units fully powered
  - Doze—core functional units disabled except time base decrementer, PLL, memory controller, RTC, and CPM in low-power standby
  - Sleep—all units disabled except RTC and PIT, PLL active for fast wake up
  - Deep sleep—all units disabled including PLL except RTC and PIT
  - Power down mode—all units powered down except PLL, RTC, PIT, time base, and decrementer
- Debug interface
  - Eight comparators: four operate on instruction address, two operate on data address, and two operate on data
  - Supports conditions: $= \neq < >$
  - Each watchpoint can generate a break-point internally.
- 3.3-V operation with 5-V TTL compatibility except EXTAL and EXTCLK
- 357-pin ball grid array (BGA) package

13 FEC Electrical Characteristics

This section provides the AC electrical specifications for the Fast Ethernet controller (FEC). Note that the timing specifications for the MII signals are independent of system clock frequency (part speed designation). Also, MII signals use TTL signal levels compatible with devices operating at either 5.0 V or 3.3 V.

13.1 MII Receive Signal Timing (MII_RXD[3:0], MII_RX_DV, MII_RX_ER, MII_RX_CLK)

The receiver functions correctly up to a MII_RX_CLK maximum frequency of 25 MHz + 1%. There is no minimum frequency requirement. In addition, the processor clock frequency must exceed the MII_RX_CLK frequency – 1%.

Table 29 provides information on the MII receive signal timing.

Table 29. MII Receive Signal Timing

Num	Characteristic	Min	Max	Unit
M1	MII_RXD[3:0], MII_RX_DV, MII_RX_ER to MII_RX_CLK setup	5	—	ns
M2	MII_RX_CLK to MII_RXD[3:0], MII_RX_DV, MII_RX_ER hold	5	—	ns
M3	MII_RX_CLK pulse width high	35%	65%	MII_RX_CLK period
M4	MII_RX_CLK pulse width low	35%	65%	MII_RX_CLK period

Figure 72 shows MII receive signal timing.
