

#### Welcome to E-XFL.COM

### What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "<u>Embedded -</u> <u>Microcontrollers</u>"

### Details

E·XE

Product Status	Obsolete
Core Processor	R8C
Core Size	16-Bit
Speed	20MHz
Connectivity	I <sup>2</sup> C, LINbus, SIO, SSU, UART/USART
Peripherals	LCD, POR, PWM, Voltage Detect, WDT
Number of I/O	88
Program Memory Size	64KB (64K x 8)
Program Memory Type	FLASH
EEPROM Size	4K x 8
RAM Size	8K x 8
Voltage - Supply (Vcc/Vdd)	1.8V ~ 5.5V
Data Converters	A/D 20x10b; D/A 2x8b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	100-BQFP
Supplier Device Package	100-QFP (14x20)
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/r5f2l3a8mdfa-u0

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

### 1.5 Pin Functions

Tables 1.14 and 1.15 list Pin Functions for R8C/L3AM Group.

Item	Pin Name	I/O Type	Description
Power supply input	VCC, VSS	-	Apply 1.8 V to 5.5 V to the VCC pin. Apply 0 V to the VSS pin.
Analog power supply input	AVCC, AVSS	-	Power supply for the A/D converter. Connect a capacitor between AVCC and AVSS.
Reset input	RESET	I	Driving this pin low resets the MCU.
MODE	MODE	I	Connect this pin to VCC via a resistor.
Power-off mode exit input	WKUP0	I	This pin is provided for input to exit the mode used in power-off mode. Connect to VSS when not using power-off mode.
XIN clock input	XIN	I	These pins are provided for XIN clock generation circuit I/O. Connect a ceramic oscillator or a crystal oscillator between pins
XIN clock output	XOUT	0	XIN and XOUT. $^{(1)}$ To use an external clock, input it to the XIN pin and leave the XOUT pin open.
XCIN clock input	XCIN	I	These pins are provided for XCIN clock generation circuit I/O. Connect a crystal oscillator between pins XCIN and XCOUT. <sup>(1)</sup>
XCIN clock output	XCOUT	0	To use an external clock, input it to the XCIN pin and leave the XCOUT pin open.
INT interrupt input	INT0 to INT7	I	INT interrupt input pins.
Key input interrupt	KI0 to KI7	Ι	Key input interrupt input pins
Timer RA	TRAIO	I/O	Timer RA I/O pin
	TRAO	0	Timer RA output pin
Timer RB	TRBO	0	Timer RB output pin
Timer RC	TRCCLK	I	External clock input pin
	TRCTRG	I	External trigger input pin
	TRCIOA, TRCIOB, TRCIOC, TRCIOD	I/O	Timer RC I/O pins
Timer RD	TRDIOA0, TRDIOA1, TRDIOB0, TRDIOB1, TRDIOC0, TRDIOC1, TRDIOD0, TRDIOD1	I/O	Timer RD I/O pins
	TRDCLK	- 1	External clock input pin
Timer RE	TREO	0	Divided clock output pin
Timer RG	TRGCLKA, TRGCLKB	Ι	Timer RG input pins
	TRGIOA, TRGIOB	I/O	Timer RG I/O pins
Serial interface	CLK0, CLK1, CLK2	I/O	Transfer clock I/O pins
	RXD0, RXD1, RXD2	Ι	Serial data input pins
	TXD0, TXD1, TXD2	0	Serial data output pins
	CTS2	Ι	Transmission control input pin
	RTS2	0	Reception control output pin
	SCL2	I/O	I <sup>2</sup> C mode clock I/O pin
	SDA2	I/O	I <sup>2</sup> C mode data I/O pin

 Table 1.14
 Pin Functions for R8C/L3AM Group (1)

I: Input O: Output I/O: Input and output

Note:

1. Contact the oscillator manufacturer for oscillation characteristics.

### 2.8.7 Interrupt Enable Flag (I)

The I flag enables maskable interrupts.

Interrupts are disabled when the I flag is set to 0, and are enabled when the I flag is set to 1. The I flag is set to 0 when an interrupt request is acknowledged.

### 2.8.8 Stack Pointer Select Flag (U)

ISP is selected when the U flag is set to 0; USP is selected when the U flag is set to 1. The U flag is set to 0 when a hardware interrupt request is acknowledged or the INT instruction of software interrupt numbers 0 to 31 is executed.

### 2.8.9 Processor Interrupt Priority Level (IPL)

IPL is 3 bits wide and assigns processor interrupt priority levels from level 0 to level 7. If a requested interrupt has higher priority than IPL, the interrupt is enabled.

### 2.8.10 Reserved Bit

If necessary, set to 0. When read, the content is undefined.

## 3. Memory

Figure 3.1 is a Memory Map of each group. Each group has a 1-Mbyte address space from addresses 00000h to FFFFh. For example, a 48-Kbyte internal ROM area is allocated addresses 04000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. The starting address of each interrupt routine is stored here.

The internal ROM (data flash) is allocated addresses 03000h to 03FFFh.

The internal RAM is allocated higher addresses, beginning with address 00400h. For example, a 6-Kbyte internal RAM area is allocated addresses 00400h to 01BFFh. The internal RAM is used not only for data storage but also as a stack area when a subroutine is called or when an interrupt request is acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh and 02C00h to 02FFh. Peripheral function control registers are allocated here. All unallocated spaces within the SFRs are reserved and cannot be accessed by users.

RENESAS

### Figure 3.1 Memory Map

#### **Special Function Registers (SFRs)** 4.

An SFR (special function register) is a control register for a peripheral function. Tables 4.1 to 4.16 list SFR Informations and Table 4.17 lists the ID Code Areas and Option Function Select Area. The description offered in this chapter is based on the R8C/L3AM Group.

Table 4.1	SFR Information (1) <sup>(1)</sup>

0039h	Voltage Monitor 1 Circuit Control Register	VW1C	10001010b

X: Undefined Notes: 1. Blan

Blank spaces are reserved. No access is allowed. The CWR bit in the RSTFR register is set to 0 after power-on, voltage monitor 0 reset, or exit from power-off mode. Hardware reset, software reset, or watchdog timer reset does not affect this bit. The CSPROINI bit in the OFS register is set to 0. 2.

3.

The LVDAS bit in the OFS register is set to 1. 4.

5. The LVDAS bit in the OFS register is set to 0.

FFF7h	ID6		(Note 2)
:			
FFFBh	ID7		(Note 2)
FFFFh	Option Function Select Register	OFS	(Note 1)

Notes:

The option function select area is allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program. 1. Do not write additions to the option function select area. If the block including the option function select area is erased, the option function select area is set to FFh.

When blank products are shipped, the option function select area is set to FFh. It is set to the written value after written by the user. When factory-programming products are shipped, the value of the option function select area is the value programmed by the user.

2. The ID code areas are allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program. Do not write additions to the ID code areas. If the block including the ID code areas is erased, the ID code areas are set to FFh. When blank products are shipped, the ID code areas are set to FFh. They are set to the written value after written by the user. When factory-programming products are shipped, the value of the ID code areas is the value programmed by the user.

### 5.3 Peripheral Function Characteristics

# Table 5.3A/D Converter Characteristics<br/>(Vcc/AVcc = Vref = 2.2 to 5.5 V, Vss = 0 V, and Topr = -20 to 85°C (N version) /<br/>-40 to 85°C (D version), unless otherwise specified.)

Symbol	Parameter		Condi	Standard			Unit	
Symbol	Falameter		Condi	Min.	Тур.	Max.	Unit	
—	Resolution		Vref = AVCC		—	—	10	Bit
_	Absolute accuracy (2)	10-bit mode	Vref = AVCC = 5.0 V	AN0 to AN19 input	_	—	±3	LSB
			Vref = AVCC = 3.3 V	AN0 to AN19 input	_	—	±5	LSB
			Vref = AVCC = 3.0 V	AN0 to AN19 input	_	—	±5	LSB
			Vref = AVCC = 2.2 V	AN0 to AN19 input	_	—	±5	LSB
		8-bit mode	Vref = AVCC = 5.0 V	AN0 to AN19 input	_	—	±2	LSB
			Vref = AVCC = 3.3 V	AN0 to AN19 input	_	—	±2	LSB
			Vref = AVCC = 3.0 V	AN0 to AN19 input	_	—	±2	LSB
			Vref = AVCC = 2.2 V	AN0 to AN19 input		_	±2	LSB
φAD	AD A/D conversion clock		$4.0 \le Vref = AVCC \le 5.5$	2	_	20	MHz	
			$3.2 \le Vref = AVCC \le 5.5$	2	_	16	MHz	
			$2.7 \leq V_{ref} = AV_{CC} \leq 5.5 \ V^{(1)}$			_	10	MHz
			$2.2 \leq Vref = AVcc \leq 5.5 V$ <sup>(1)</sup>		2	_	5	MHz
_	Tolerance level impedance				_	3	—	kΩ
<b>t</b> CONV	Conversion time	10-bit mode	$V_{ref} = AV_{CC} = 5.0 V, \phi$	AD = 20 MHz	2.2	_		μS
		8-bit mode	$Vref = AVCC = 5.0 V, \phi/$	AD = 20 MHz	2.2	—		μS
<b>t</b> SAMP	Sampling time		φAD = 20 MHz		0.8	—		μS
lVref	Vref current		$Vcc = 5 V$ , $XIN = f1 = \phi AD = 20 MHz$			45		μΑ
Vref	Reference voltage				2.2	_	AVcc	V
Via	Analog input voltage (3)				0	_	Vref	V
OCVREF	On-chip reference voltage		$2 \text{ MHz} \le \phi \text{AD} \le 4 \text{ MHz}$	2	1.19	1.34	1.49	V

Notes:

 The A/D conversion result will be undefined in wait mode, stop mode, power-off mode, when the flash memory stops, and in low-current-consumption mode. Do not perform A/D conversion in these states or transition to these states during A/D conversion.

2. This applies when the peripheral functions are stopped.

3. When the analog input voltage is over the reference voltage, the A/D conversion result will be 3FFh in 10-bit mode and FFh in 8-bit mode.

# Table 5.13High-speed On-Chip Oscillator Circuit Characteristics<br/>(Vcc = 1.8 to 5.5 V and Topr = -20 to 85°C (N version) / -40 to 85°C (D version), unless<br/>otherwise specified.)

0	Descenter			Unit

# **Package Dimensions**

Diagrams showing the latest package dimensions and mounting information are available in the "Packages" section of the Renesas Electronics web site.

#### Notice

- All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
- Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- 3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
- 4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
- 5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
- 6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
- 7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The recommended where you have failed to obtain the prior written consent of Renesas Electronics and the prior written consent of Renesas Electronics and the prior written consent of Renesas Electronics. The recommended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
- "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools
- personal electronic equipment; and industrial robots.
  "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically
  designed for life support.
- \*Specific\*: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
- 8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
- 9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and mafunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and mafunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
- 10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

Refer to "http://www.renesas.com/" for the latest and detailed information
