

Welcome to E-XFL.COM

#### What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "<u>Embedded -</u> <u>Microcontrollers</u>"

#### Details

Details	
Product Status	Obsolete
Core Processor	R8C
Core Size	16-Bit
Speed	20MHz
Connectivity	SIO, SSU, UART/USART
Peripherals	LED, POR, Voltage Detect, WDT
Number of I/O	13
Program Memory Size	16KB (16K × 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	1K x 8
Voltage - Supply (Vcc/Vdd)	2.7V ~ 5.5V
Data Converters	A/D 4x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	20-LSSOP (0.173", 4.40mm Width)
Supplier Device Package	20-LSSOP
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/r5f21154dsp-u0

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

#### Notice

- 1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
- Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- 3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
- 4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
- 5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
- 6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
- 7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anticrime systems; safety equipment; and medical equipment not specifically designed for life support.
  - "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
- 8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
- 9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
- 10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majorityowned subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

	ltem	Performance
CPU	Number of Basic Instructions	89 instructions
	Minimum Instruction	50ns (f(XIN)=20MHz, VCC=3.0 to 5.5V)
	Execution Time	100ns (f(XIN)=10MHz, VCC=2.7 to 5.5V)
	Operating Mode	Single-chip
	Memory Space	1 Mbyte
	Memory Capacity	See Table 1.4 R8C/15 Group Product Information
Peripheral	Port	I/O : 13 pins (including LED drive port),
Function		Input : 2 pins
	LED drive port	I/O port: 4 pins
	Timer	Timer X: 8 bits x 1 channel, Timer Z: 8 bits x 1 channel
		(Each timer equipped with 8-bit prescaler)
		Timer C: 16 bits × 1 channel
		(Circuits of input capture and output compare)
	Serial Interface	1 channel
		Clock synchronous serial I/O, UART
	Chip-select clock	1 channel
	synchronous serial I/O (SSU)	
	A/D Converter	10-bit A/D converter: 1 circuit, 4 channels
	Watchdog Timer	15 bits × 1 channel (with prescaler)
		Reset start selectable, Count source protection mode
	Interrupt	Internal: 9 factors, External: 4 factors, Software: 4 factors
	interrapt	Priority level: 7 levels
	Clock Generation Circuit	2 circuits
		Main clock generation circuit (Equipped with a built-in
		feedback resistor)
		On-chip oscillator (high speed, low speed)
		Equipped with frequency adjustment function on high-
		speed on-chip oscillator
	Oscillation Stop Detection	Main clock oscillation stop detection function
	Function	
	Voltage Detection Circuit	Included
	Voltage Detection Oneut	noiddod

#### Table 1.2 Performance Outline of the R8C/15 Group

As of Jan 2006

#### 1.4 **Product Information**

Table 1.3 lists the Product Information of R8C/14 Group and Table 1.4 lists the Product Information of R8C/15 Group.

Product Information of R8C/14 Group

Type No.	ROM capacity	RAM capacity	Package type	Remarks
R5F21142SP	8 Kbytes	512 bytes	PLSP0020JB-A	Flash memory version
R5F21143SP	12 Kbytes	768 bytes	PLSP0020JB-A	
R5F21144SP	16 Kbytes	1 Kbyte	PLSP0020JB-A	
R5F21142DSP	8 Kbytes	512 bytes	PLSP0020JB-A	D version
R5F21143DSP	12 Kbytes	768 bytes	PLSP0020JB-A	
R5F21144DSP	16 Kbytes	1 Kbyte	PLSP0020JB-A	

### 1.6 Pin Description

Table 1.5 lists the Pin Description and Table 1.6 lists the Pin Name Information by Pin Number.

Function	Pin name	I/O type	Description
Power Supply Input	VCC VSS	I	Apply 2.7V to 5.5V to the VCC pin. Apply 0V to the VSS pin
Analog Power Supply Input	AVCC AVSS	I	Power supply input pins to A/D converter. Connect AVCC to VCC. Apply 0V to AVSS. Connect a capacitor between AVCC and AVSS.
Reset Input	RESET	I	Input "L" on this pin resets the MCU
MODE	MODE	I	Connect this pin to VCC via a resistor
Main Clock Input	XIN	I	These pins are provided for the main clock
Main Clock Output	XOUT	0	generation circuit I/O. Connect a ceramic resonator or a crystal oscillator between the XIN and XOUT pins. To use an externally derived clock, input it to the XIN pin and leave the XOUT pin open.
INT Interrupt	INTO, INT1, INT3	I	INT interrupt input pins
Key Input Interrupt	KI0 to KI3	I	Key input interrupt input pins
Timer X	CNTR0	I/O	Timer X I/O pin
	CNTR0	0	Timer X output pin.
Timer Z	TZOUT	0	Timer Z output pin
Timer C	TCIN	I	Timer C input pin
	CMP0_0 to CMP0_2, CMP1_0 to CMP1_2	0	Timer C output pins.
Serial Interface	CLK0	I/O	Transfer clock I/O pin.
	RXD0	I	Serial data input pin.
	TXD0	0	Serial data output pin.
SSU	SSI	I/O	Data I/O pin.
	SCS	I/O	Chip-select signal I/O pin.
	SSCK	I/O	Clock I/O pin.
	SSO	I/O	Data I/O pin.
Reference Voltage Input	VREF	I	Reference voltage input pin to A/D converter Connect VREF to VCC
A/D Converter	AN8 to AN11	I	Analog input pins to A/D converter
I/O Port	P1_0 to P1_7, P3_3 to P3_5, P3_7, P4_5	I/O	These are CMOS I/O ports. Each port contains an I/O select direction register, allowing each pin in that port to be directed for input or output individually. Any port set to input can select whether to use a pull-up resistor or not by program. P1_0 to P1_3 also function as LED drive ports.
Input Port	P4_6, P4_7	I	Port for input-only

#### Table 1.5Pin Description

I: Input O: Output I/O: Input and output

#### 2.1 Data Registers (R0, R1, R2 and R3)

R0 is a 16-bit register for transfer, arithmetic and logic operations. The same applies to R1 to R3. The R0 can be split into high-order bit (R0H) and low-order bit (R0L) to be used separately as 8-bit data registers. The same applies to R1H and R1L as R0H and R0L. R2 can be combined with R0 to be used as a 32-bit data register (R2R0). The same applies to R3R1 as R2R0.

### 2.2 Address Registers (A0 and A1)

A0 is a 16-bit register for address register indirect addressing and address register relative addressing. They also are used for transfer, arithmetic and logic operations. The same applies to A1 as A0. A0 can be combined with A0 to be used as a 32-bit address register (A1A0).

#### 2.3 Frame Base Register (FB)

FB is a 16-bit register for FB relative addressing.

#### 2.4 Interrupt Table Register (INTB)

INTB is a 20-bit register indicates the start address of an interrupt vector table.

#### 2.5 Program Counter (PC)

PC, 20 bits wide, indicates the address of an instruction to be executed.

#### 2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointer (SP), USP and ISP, are 16 bits wide each. The U flag of FLG is used to switch between USP and ISP.

#### 2.7 Static Base Register (SB)

SB is a 16-bit register for SB relative addressing.

#### 2.8 Flag Register (FLG)

FLG is a 11-bit register indicating the CPU state.

#### 2.8.1 Carry Flag (C)

The C flag retains a carry, borrow, or shift-out bit that has occurred in the arithmetic logic unit.

#### 2.8.2 Debug Flag (D)

The D flag is for debug only. Set to "0".

### 2.8.3 Zero Flag (Z)

The Z flag is set to "1" when an arithmetic operation resulted in 0; otherwise, "0".

### 2.8.4 Sign Flag (S)

The S flag is set to "1" when an arithmetic operation resulted in a negative value; otherwise, "0".

#### 2.8.5 Register Bank Select Flag (B)

The register bank 0 is selected when the B flag is "0". The register bank 1 is selected when this flag is set to "1".

#### 2.8.6 Overflow Flag (O)

The O flag is set to "1" when the operation resulted in an overflow; otherwise, "0".

### 2.8.7 Interrupt Enable Flag (I Flag)

The I flag enables a maskable interrupt.

An interrupt is disabled when the I flag is set to "0", and are enabled when the I flag is set to "1". The I flag is set to "0" when an interrupt request is acknowledged.

### 2.8.8 Stack Pointer Select Flag (U Flag)

ISP is selected when the U flag is set to "0", USP is selected when the U flag is set to "1". The U flag is set to "0" when a hardware interrupt request is acknowledged or the INT instruction of software interrupt numbers 0 to 31 is executed.

### 2.8.9 Processor Interrupt Priority Level (IPL)

IPL, 3 bits wide, assigns processor interrupt priority levels from level 0 to level 7. If a requested interrupt has greater priority than IPL, the interrupt is enabled.

#### 2.8.10 Reserved Bit

When write to this bit, set to "0". When read, its content is indeterminate.

## 3. Memory

#### 3.1 R8C/14 Group

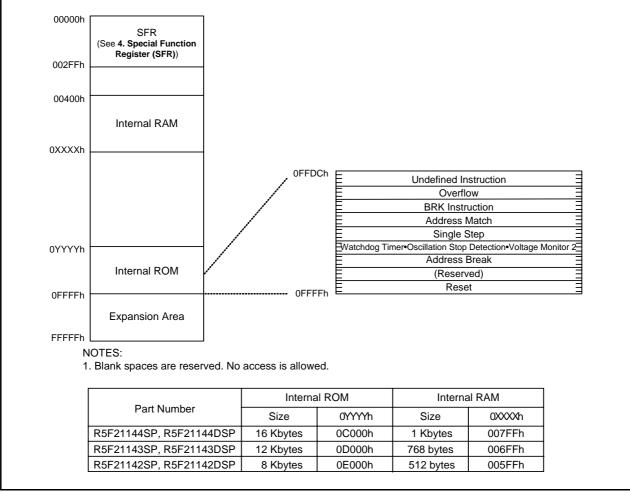

Figure 3.1 is a Memory Map of R8C/14 Group. The R8C/14 group provides 1-Mbyte address space from addresses 00000h to FFFFh.

The internal ROM is allocated lower addresses beginning with address 0FFFFh. For example, a 16-Kbyte internal ROM is allocated addresses 0C000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. They store the starting address of each interrupt routine.

The internal RAM is allocated higher addresses beginning with address 00400h. For example, a 1-Kbyte internal RAM is allocated addresses 00400h to 007FFh. The internal RAM is used not only for storing data but for calling subroutines and stacks when interrupt request is acknowledged.

Special function registers (SFR) are allocated addresses 00000h to 002FFh. The peripheral function control registers are allocated them. All addresses, which have nothing allocated within the SFR, are reserved area and cannot be accessed by users.

#### Table 4.4SFR Information(4)(1)

X: Undefined

NOTES:

1. Blank columns, 0100h to 01B2h and 01B8h to 02FFh are all reserved. No access is allowed.

2. The OFS register cannot be changed by program. Use a flash programmer to write to it.

#### **Electrical Characteristics** 5.

Symbol	Parameter	Condition	Rated value	Unit
Vcc	Supply Voltage	Vcc = AVcc	-0.3 to 6.5	V
AVcc	Analog Supply Voltage	Vcc = AVcc	-0.3 to 6.5	V
VI	Input Voltage		-0.3 to Vcc+0.3	V
Vo	Output Voltage		-0.3 to Vcc+0.3	V
Pd	Power Dissipation	Topr = 25°C	300	mW
Topr	Operating Ambient Temperature		-20 to 85 / -40 to 85 (D version)	°C
Tstg	Storage Temperature		-65 to 150	°C

**Recommended Operating Conditions** Table 5.2

Symbol	De	rameter	Conditions		Standard		Unit
Symbol	Pa	lameter	Conditions	Min.	Тур.	Max.	Unit
Vcc	Supply Voltage			2.7	-	5.5	V
AVcc	Analog Supply Vo	Itage		-	Vcc <sup>(3)</sup>	-	V
Vss	Supply Voltage			-	0	-	V
AVss	Analog Supply Vo	Itage		-	0	-	V

			Drive Capacity LOW	-	-	10	mA
IOL(avg)	Average Output	Except P1_0 to P1_3		-	-	5	mA
	"L" Current	P1_0 to P1_3	Drive Capacity HIGH	-	-	15	mA
			Drive Capacity LOW	-	-	5	mA
f(XIN)	Main Clock Input	Oscillation Frequency	$3.0V \leq Vcc \leq 5.5V$	0	-	20	MHz
IOL(avg)			$2.7V \leq Vcc < 3.0V$	0	-	10	MHz

NOTES:

1. Vcc = AVcc = 2.7 to 5.5V at  $T_{opr}$  = -20 to 85 °C / -40 to 85 °C, unless otherwise specified. 2. The typical values when average output current is 100ms.

3. Hold Vcc = AVcc.

#### Table 5.3 A/D Converter Characteristics

NOTES:

1. Vcc = AVcc = 2.7 to 5.5V at Topr = -20 to 85 °C / -40 to 85 °C, unless otherwise specified.

2. If f1 exceeds 10MHz, divide the f1 and hold A/D operating clock frequency ( $\phi_{AD}$ ) 10MHz or below.

3. If the AVcc is less than 4.2V, divide the f1 and hold A/D operating clock frequency ( $\phi$ AD) f1/2 or below.

4. Hold Vcc = Vref

#### Table 5.5 Flash Memory (Data flash Block A, Block B) Electrical Characteristics

NOTES:

1. Vcc = AVcc = 2.7 to 5.5V at Topr = -20 to 85 °C / -40 to 85 °C, unless otherwise specified.

2. Definition of program and erase The program and erase endurance shows an erase endurance for every block. If the program and erase endurance is "n" times (n = 100, 10000), "n" times erase can be performed for every block. For example, if performing 1-byte write to the distinct addresses on Block A of 1Kbyte block 1,024 times and then erasing that block, program and erase endurance is counted as one time. However, do not perform multiple programs to the same address for one time ease.(disable overwriting).

3. Endurace to guarantee all electrical characteristics after program and erase.(1 to "Min." value can be guaranateed).

4. Standard of Block A and Block B when program and erase endurance exceeds 1,000 times. Byte program time to 1,000 times aer the same as that in program area.

5. In the case of a system to execute multiple programs, perform one erase after programming as reducing effective reprogram endurance not to leave blank area as possible such as programming write addresses in turn . If programming a set of 16 bytes, programming up to 128 sets and then erasing them one time can reduce effective reprogram endurance. Additionally, averaging erase endurance for Block A and B can reduce effective reprogram endurance more. To leave erase endurance for every block as information and determine the restricted endurance are recommended.

6. If error occurs during block erase, attempt to execute the clear status register command, then the block erase command at least three times until the erase error does not occur.

7. Customers desiring Program/Erase failure rate information should contact their Renesas technical support representative.

8. -40 °C for D version.

9. The data hold time incudes time that the power supply is off or the clock is not supplied.

Symbol	Parameter	Condition	ę	Standard		Unit
			Min.	Тур.	Max.	
Vpor2	Power-On Reset Valid Voltage	$\text{-}20^\circ C \leq \text{Topr} < 85^\circ C$	-	-	Vdet1	V
tw(Vpor2-Vdet1)	Supply Voltage Rising Time When Power-On Reset is Deasserted <sup>(1)</sup>	$\label{eq:constraint} \begin{array}{l} -20^{\circ}C \leq Topr < 85^{\circ}C, \\ t_{w(por2)} \geq 0s^{(3)} \end{array}$	-	-	100	ms

#### Table 5.8 Reset Circuit Electrical Characteristics (When Using Voltage Monitor 1 Reset )

NOTES:

1. This condition is not applicable when using with Vcc  $\ge$  1.0V.

2. When turning power on after the time to hold the external power below effective voltage (Vpor1) exceeds10s, refer to Table 5.9 Reset Circuit Electrical Characteristics (When Not Using Voltage Monitor 1 Reset).

3. tw(por2) is time to hold the external power below effective voltage (Vpor2).

#### Table 5.9 Reset Circuit Electrical Characteristics (When Not Using Voltage Monitor 1 Reset)

Symbol	Parameter	Condition		Standar	d	Unit
			Min.	Тур.	Max.	
Vpor1	Power-On Reset Valid Voltage	$\text{-20}^\circ C \leq \text{Topr} < 85^\circ C$	-	-	0.1	V
tw(Vpor1-Vdet1)	Supply Voltage Rising Time When Power-On Reset is Deasserted	$\label{eq:constraint} \begin{split} 0^\circ C &\leq Topr \leq 85^\circ C, \\ tw(\text{por1}) &\geq 10s^{(2)} \end{split}$	-	-	100	ms
tw(Vpor1-Vdet1)	Supply Voltage Rising Time When Power-On Reset is Deasserted	$\label{eq:constraint} \begin{array}{l} -20^\circ C \leq Topr < 0^\circ C, \\ t_{w(por1)} \geq 30s^{(2)} \end{array}$	-	-	100	ms
tw(Vpor1-Vdet1)	Supply Voltage Rising Time When Power-On Reset is Deasserted	$\label{eq:constraint} \begin{array}{l} -20^\circ C \leq Topr < 0^\circ C, \\ tw(por1) \geq 10s^{(2)} \end{array}$	-	-	1	ms
tw(Vpor1-Vdet1)	Supply Voltage Rising Time When Power-On Reset is Deasserted	$\begin{array}{l} 0^{\circ}C \leq Topr \leq 85^{\circ}C, \\ t_{w(por1)} \geq 1s^{(2)} \end{array}$	-	-	0.5	ms

#### NOTES:

1. When not using the voltage monitor 1 reset, use with Vcc $\ge$  2.7V.

2. tw(por1) is time to hold the external power below effective voltage (Vpor1).
