

Welcome to E-XFL.COM

What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "[Embedded - Microcontrollers](#)"

Details

Product Status	Active
Core Processor	M32C/80
Core Size	16/32-Bit
Speed	32MHz
Connectivity	CANbus, EBI/EMI, I ² C, IEBus, IrDA, SIO, UART/USART
Peripherals	DMA, POR, PWM, WDT
Number of I/O	121
Program Memory Size	1MB (1M x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	48K x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 5.5V
Data Converters	A/D 34x10b; D/A 2x8b
Oscillator Type	Internal
Operating Temperature	-20°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	144-LQFP
Supplier Device Package	144-LFQFP (20x20)
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/m3087bflagp-u5

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

1. Overview

1.1 Features

The M32C/87 Group (M32C/87, M32C/87A, M32C/87B) is a single-chip control MCU, fabricated using high-performance silicon gate CMOS technology, embedding the M32C/80 Series CPU core. The M32C/87 Group (M32C/87, M32C/87A, M32C/87B) is housed in 144-pin and 100-pin plastic molded LQFP/QFP packages.

With a 16-Mbyte address space, this MCU combines advanced instruction manipulation capabilities to process complex instructions by less bytes and execute instructions at higher speed.

The M32C/87 Group (M32C/87, M32C/87A, M32C/87B) has a multiplier and DMAC adequate for office automation, communication devices and industrial equipment, and other high-speed processing applications.

1.1.1 Applications

Audio components, cameras, office equipment, communication devices, mobile devices, etc.

1.2 Product List

Tables 1.5 to 1.7 list product information. Figure 1.1 shows product numbering system.

Table 1.5 M32C/87 Group (1) (M32C/87: 2-channel CAN module) Current as of Jul. 2008

NOTE:

1. Additional 4-Kbyte space is available for data flash memory.

2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU registers.

The register bank is comprised of eight registers (R0, R1, R2, R3, A0, A1, SB, and FB) out of 28 CPU registers. There are two sets of register banks.

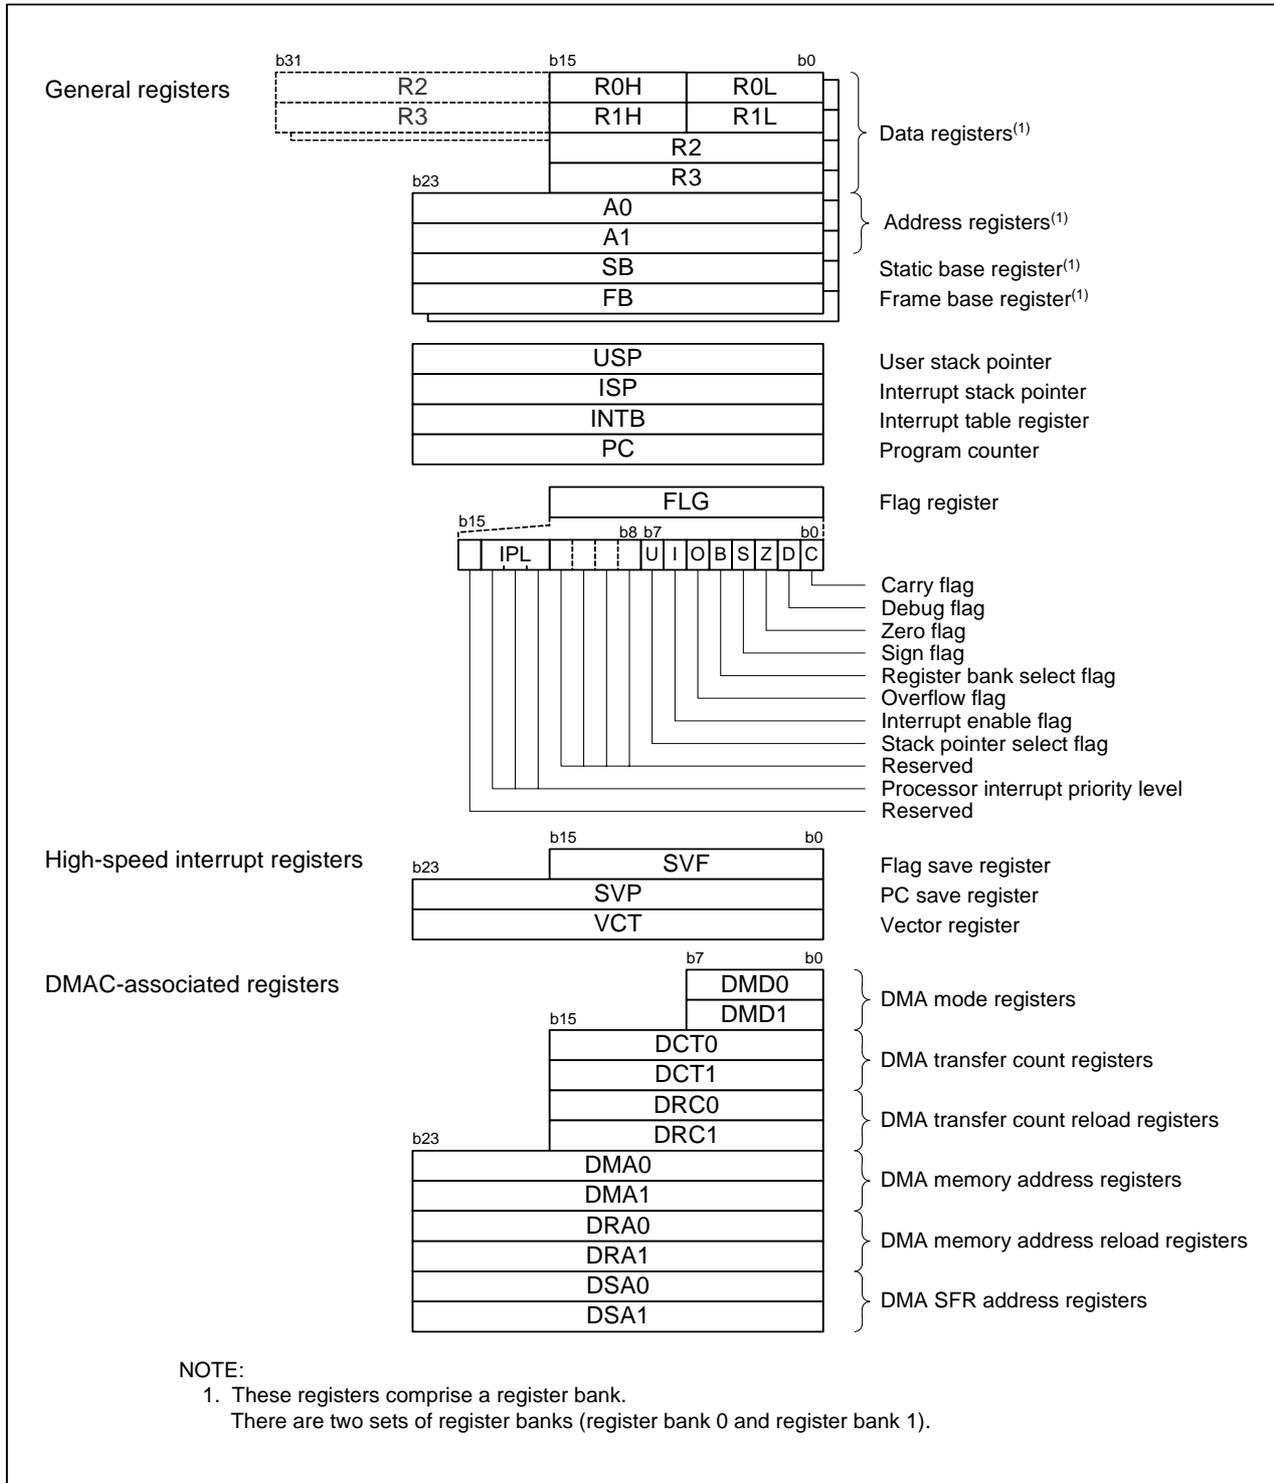

Figure 2.1 CPU Register

2.1 General Registers

2.1.1 Data Registers (R0, R1, R2, and R3)

R0, R1, R2, and R3 are 16-bit registers for transfer, arithmetic and logic operations. R0 and R1 can be split into high-order (R0H/R1H) and low-order bits (R0L/R1L) to be used separately as 8-bit data registers. R0 can be combined with R2 and used as a 32-bit data register (R2R0). The same applies to R3R1.

2.1.2 Address Registers (A0 and A1)

A0 and A1 are 24-bit registers used for A0-/A1-indirect addressing, A0-/A1-relative addressing, transfer, arithmetic and logic operations.

2.1.3 Static Base Register (SB)

SB is a 24-bit register used for SB-relative addressing.

2.1.4 Frame Base Register (FB)

FB is a 24-bit register used for FB-relative addressing.

2.1.5 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointers (SP), USP and ISP, are 24 bits wide each. The U flag is used to switch between USP and ISP. Refer to **2.1.8 Flag Register (FLG)** for details on the U flag. Set USP and ISP to even addresses to execute an interrupt sequence efficiently.

2.1.6 Interrupt Table Register (INTB)

INTB is a 24-bit register indicating the starting address of a relocatable interrupt vector table.

2.1.7 Program Counter (PC)

PC is 24 bits wide and indicates the address of the next instruction to be executed.

2.1.8 Flag Register (FLG)

FLG is a 16-bit register indicating the CPU state.

2.1.8.1 Carry Flag (C)

The C flag indicates whether or not carry or borrow has been generated after executing an instruction.

2.1.8.2 Debug Flag (D)

The D flag is for debugging only. Set it to 0.

2.1.8.3 Zero Flag (Z)

The Z flag becomes 1 when an arithmetic operation results in 0; otherwise becomes 0.

2.1.8.4 Sign Flag (S)

The S flag becomes 1 when an arithmetic operation results in a negative value; otherwise becomes 0.

2.1.8.5 Register Bank Select Flag (B)

Register bank 0 is selected when the B flag is set to 0. Register bank 1 is selected when this flag is set to 1.

2.1.8.6 Overflow Flag (O)

The O flag becomes 1 when an arithmetic operation results in an overflow; otherwise becomes 0.

2.1.8.7 Interrupt Enable Flag (I)

The I flag enables maskable interrupts.

Interrupts are disabled when the I flag is set to 0 and enabled when it is set to 1. The I flag becomes 0 when an interrupt request is acknowledged.

2.1.8.8 Stack Pointer Select Flag (U)

ISP is selected when the U flag is set to 0. USP is selected when the U flag is set to 1.

The U flag becomes 0 when a hardware interrupt request is acknowledged or the INT instruction specifying software interrupt numbers 0 to 31 is executed.

2.1.8.9 Processor Interrupt Priority Level (IPL)

IPL is 3 bits wide and assigns processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has higher priority level than IPL, the interrupt is enabled.

2.1.8.10 Reserved Space

Only write 0 to bits assigned to the reserved space. When read, the bits return undefined values.

2.2 High-Speed Interrupt Registers

Registers associated with the high-speed interrupt are as follows:

- Flag save register (SVF)
- PC save register (SVP)
- Vector register (VCT)

2.3 DMAC-Associated Registers

Registers associated with the DMAC are as follows:

- DMA mode register (DMD0, DMD1)
- DMA transfer count register (DCT0, DCT1)
- DMA transfer count reload register (DRC0, DRC1)
- DMA memory address register (DMA0, DMA1)
- DMA memory address reload register (DRA0, DRA1)
- DMA SFR address register (DSA0, DSA1)

Table 4.8 SFR Address Map (8/20)

Address	Register	Symbol	After Reset

X: Undefined

Blank spaces are all reserved. No access is allowed.

NOTES:

- Values are obtained by setting the SLEEP bit in the C0SLPR register to "1" (sleep mode exited) after reset and supplying a clock to the CAN module.
- The CAN-associated registers (allocated in addresses 01E0h to 02BFh) cannot be used in M32C/87B. In M32C/87A, only CAN0-associated registers can be used.
- Set the PM13 bit in the PM1 register to 1 (2 wait states for SFR area) before accessing the CAN-associated registers.

Blank spaces are all reserved. No access is allowed.

NOTES:

1. The BANKSEL bit in the C0CTLR1 register can switch functions for addresses 0220h to 023Fh.
2. Values are obtained by setting the SLEEP bit in the C0SLPR register to "1" (sleep mode exited) after reset and supplying a clock to the CAN module.
3. The CAN-associated registers (allocated in addresses 01E0h to 02BFh) cannot be used in M32C/87B. In M32C/87A, only CAN0-associated registers can be used.
4. Set the PM13 bit in the PM1 register to 1 (2 wait states for SFR area) before accessing the CAN-associated registers.

th(BCLK-HOLD)	\overline{HOLD} input hold time	0		ns
td(BCLK-HLDA)	\overline{HLDA} output delay time		25	ns

NOTE:

1. Values, which depend on BCLK frequency and external bus cycles, can be obtained from the following equations. Insert wait states or lower the operation frequency, f(BCLK), if the calculated value is negative.

$$tac1(RD-DB) = \frac{10^9 \times m}{f(BCLK) \times 2} - 35 \text{ [ns]} \text{ (if external bus cycle is } a\phi + b\phi, m = (b \times 2) + 1)$$

$$tac1(AD-DB) = \frac{10^9 \times n}{f(BCLK)} - 35 \text{ [ns]} \text{ (if external bus cycle is } a\phi + b\phi, n = a + b)$$

$$tac2(RD-DB) = \frac{10^9 \times m}{f(BCLK) \times 2} - 35 \text{ [ns]} \text{ (if external bus cycle is } a\phi + b\phi, m = (b \times 2) - 1)$$

$$tac2(AD-DB) = \frac{10^9 \times p}{f(BCLK) \times 2} - 35 \text{ [ns]} \text{ (if external bus cycle is } a\phi + b\phi, p = \{(a + b - 1) \times 2\} + 1)$$

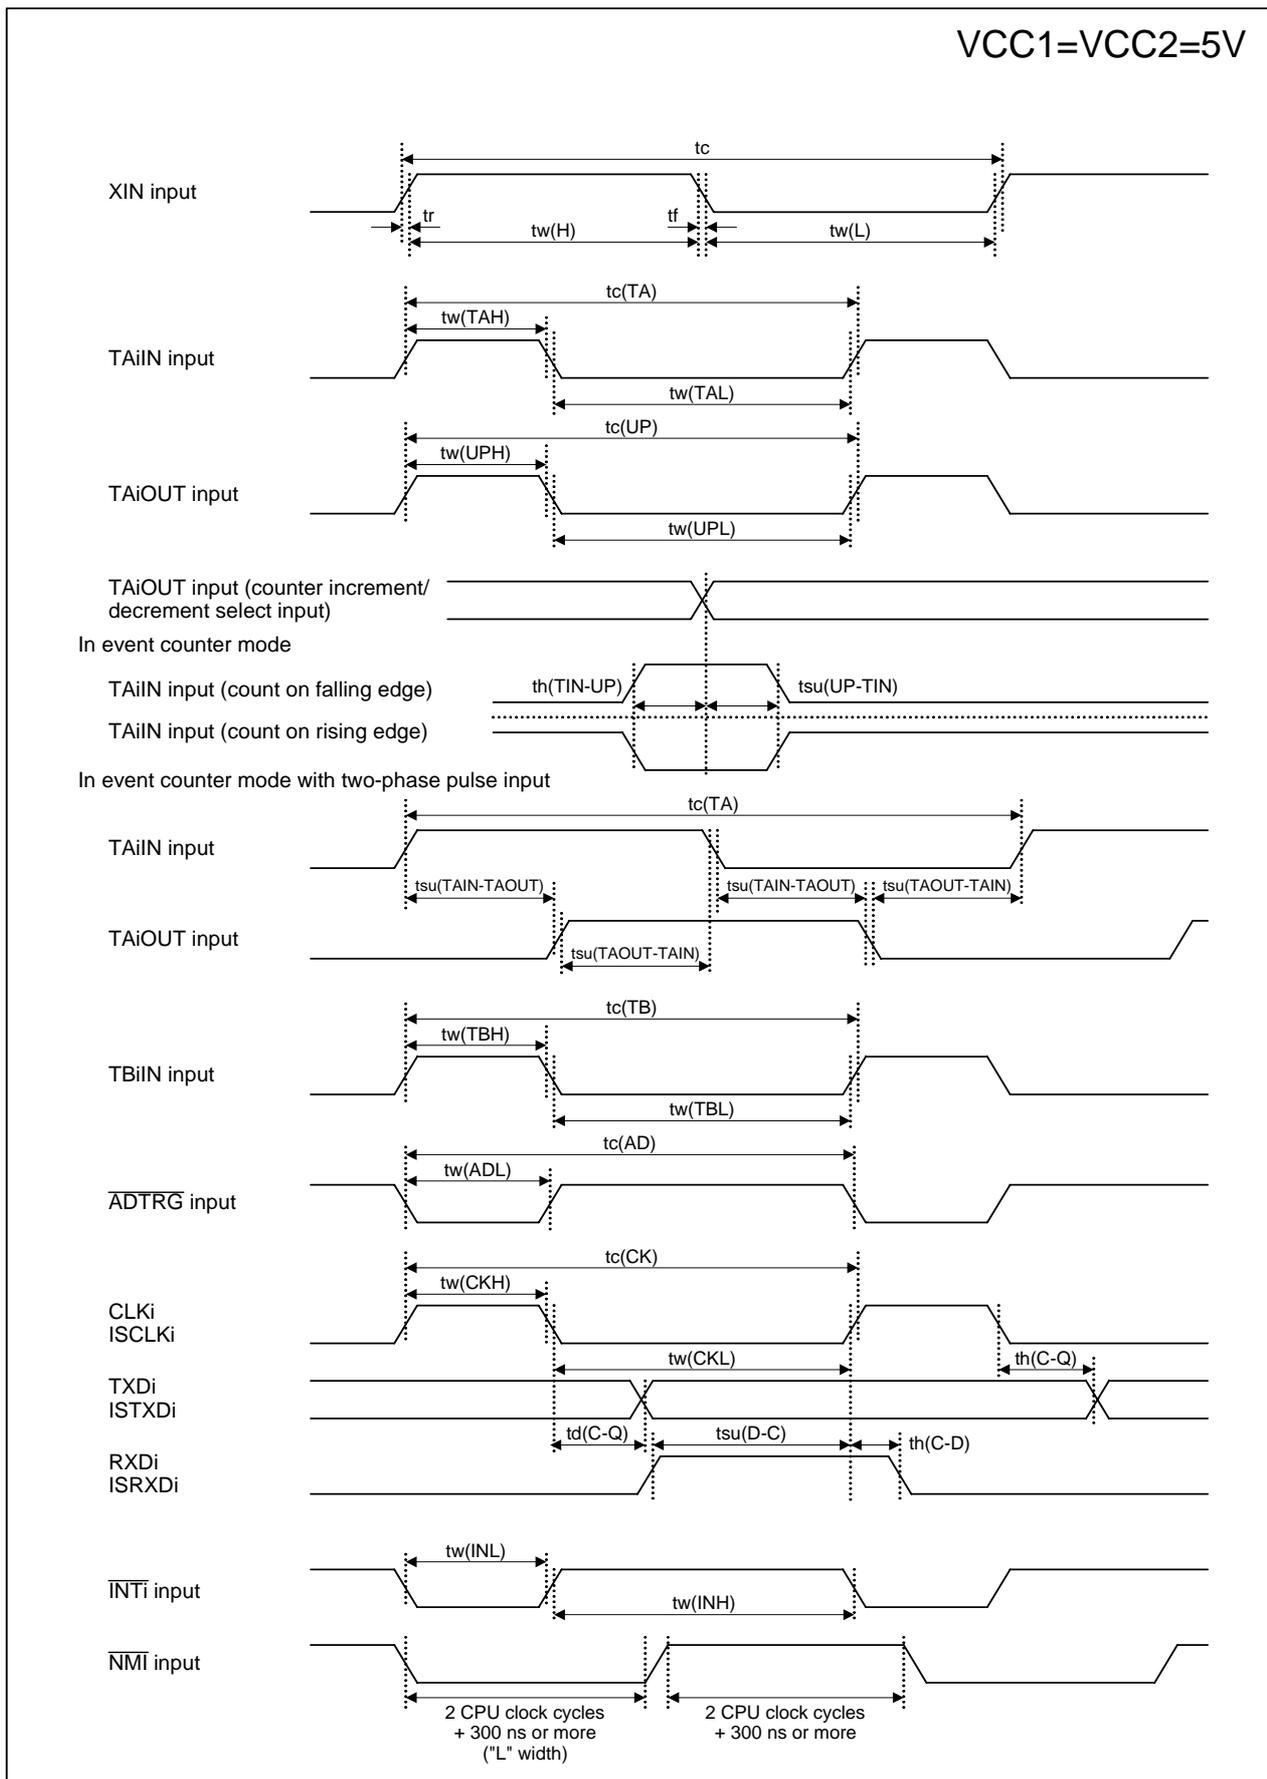

Figure 5.3 VCC1 = VCC2 = 5 V Timing Diagram (1/4)

$$VCC1 = VCC2 = 3.3 V$$

Table 5.33 Electrical Characteristics (3/3)
(VCC1 = VCC2 = 3.3 V, VSS = 0 V, Topr = 25°C)

Symbol	Parameter	Measurement Condition ⁽¹⁾	Standard			Unit	
			Min.	Typ.	Max.		
ICC	Power supply current	Flash memory version	f(CPU) = 24 MHz		23	33	mA
			f(CPU) = 16 MHz		17		mA
			f(CPU) = 8 MHz		11		mA
			f(CPU) = f(Ring) In on-chip oscillator low-power consumption mode		2.6		mA
			f(CPU) = 32 kHz In low-power consumption mode While flash memory is operating		430		μA
			f(CPU) = 32 kHz In low-power consumption mode While flash memory is stopped ⁽²⁾		30		μA
			Wait mode: f(CPU) = f(Ring) After entering wait mode from on-chip oscillator low-power consumption mode		45		μA
			Stop mode (while clock is stopped)		0.8	5	μA
			Stop mode (while clock is stopped) Topr = 85°C			50	μA
		Mask ROM version	f(CPU) = 24 MHz		23	33	mA
			f(CPU) = 16 MHz		17		mA
			f(CPU) = 8 MHz		11		mA
			f(CPU) = f(Ring) In on-chip oscillator low-power consumption mode		1		mA
			f(CPU) = 32 kHz In low-power consumption mode		30		μA
			Wait mode: f(CPU) = f(Ring) After entering wait mode from on-chip oscillator low-power consumption mode		45		μA
			Stop mode (while clock is stopped)		0.8	5	μA
			Stop mode (while clock is stopped) Topr = 85°C			50	μA

NOTES:

1. In single-chip mode, leave the output pins open and connect the input pins to VSS.
2. Value is obtained when setting the FMSTP bit in the FMR0 register to 1 (flash memory stopped) and running the program on RAM.

$$VCC1 = VCC2 = 3.3 V$$

Switching Characteristics

(VCC1 = VCC2 = 3.0 to 3.6 V, VSS = 0 V, Topr = -20 to 85°C unless otherwise specified)

Table 5.53 Memory Expansion Mode and Microprocessor Mode (when accessing external memory space with multiplexed bus)

th(BCLK-ALE)	ALE signal output hold time (BCLK standard)		-2		ns
td(AD-ALE)	ALE signal output delay time (address standard)		(note 3)		ns
th(ALE-AD)	ALE signal output hold time (address standard)		(note 4)		ns
tdz(RD-AD)	Address output float start time			8	ns

NOTES:

1. Values, which depend on BCLK frequency, can be obtained from the following equations.

$$th(RD-AD) = \frac{10^9}{f(BCLK) \times 2} - 10 \text{ [ns]}$$

$$th(WR-AD) = \frac{10^9}{f(BCLK) \times 2} - 15 \text{ [ns]}$$

$$th(RD-CS) = \frac{10^9}{f(BCLK) \times 2} - 10 \text{ [ns]}$$

$$th(WR-CS) = \frac{10^9}{f(BCLK) \times 2} - 10 \text{ [ns]}$$

$$th(WR-DB) = \frac{10^9}{f(BCLK) \times 2} - 20 \text{ [ns]}$$

2. Values, which depend on BCLK frequency and external bus cycles, can be obtained from the following equation.

$$td(DB-WR) = \frac{10^9 \times m}{f(BCLK) \times 2} - 25 \text{ [ns]} \text{ (if external bus cycle is } a\phi + b\phi, m = (b \times 2) - 1)$$

3. Values, which depend on BCLK frequency and external bus cycles, can be obtained from the following equation.

$$td(AD-ALE) = \frac{10^9 \times n}{f(BCLK) \times 2} - 20 \text{ [ns]} \text{ (if external bus cycle is } a\phi + b\phi, n = a)$$

4. Values, which depend on BCLK frequency and external bus cycles, can be obtained from the following equation.

$$th(ALE-AD) = \frac{10^9 \times n}{f(BCLK) \times 2} - 20 \text{ [ns]} \text{ (if external bus cycle is } a\phi + b\phi, n = a)$$

5. tc [ns] is added when recovery cycle is inserted.
