

Welcome to [E-XFL.COM](#)

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

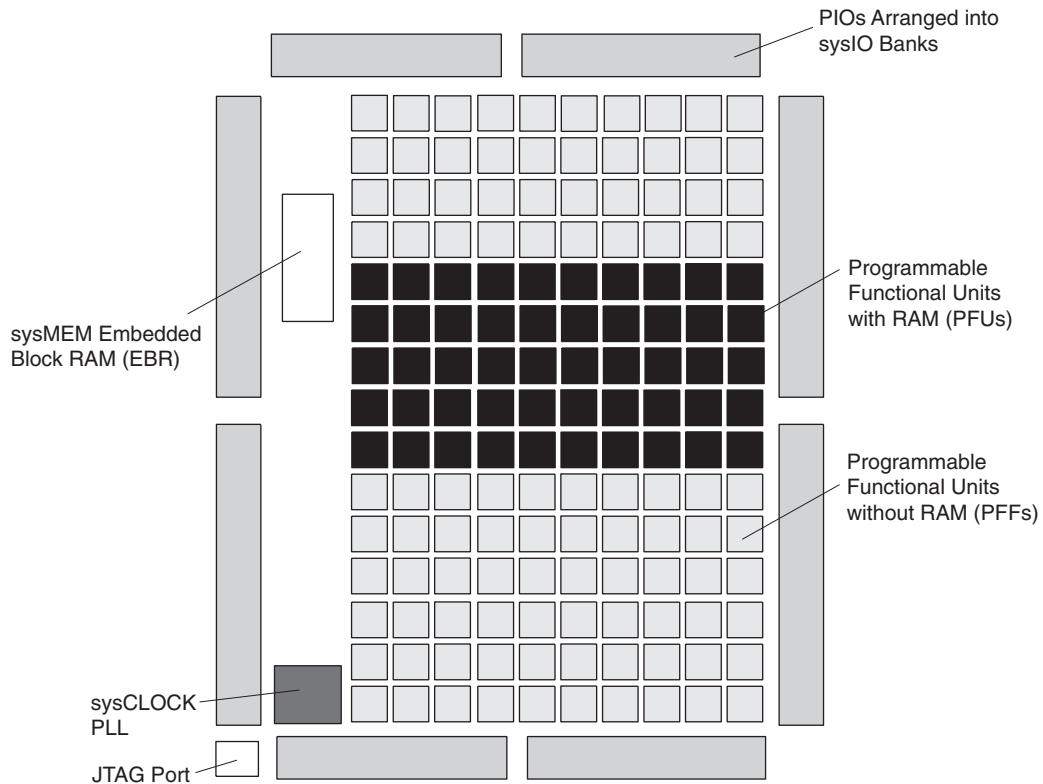

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Details

| | |
|--------------------------------|---|
| Product Status | Obsolete |
| Number of LABs/CLBs | 150 |
| Number of Logic Elements/Cells | 1200 |
| Total RAM Bits | 9421 |
| Number of I/O | 211 |
| Number of Gates | - |
| Voltage - Supply | 1.71V ~ 3.465V |
| Mounting Type | Surface Mount |
| Operating Temperature | -40°C ~ 100°C (TJ) |
| Package / Case | 256-LFBGA, CSPBGA |
| Supplier Device Package | 256-CABGA (14x14) |

Figure 2-1. Top View of the MachXO1200 Device¹

1. Top view of the MachXO2280 device is similar but with higher LUT count, two PLLs, and three EBR blocks.

Figure 2-2. Top View of the MachXO640 Device

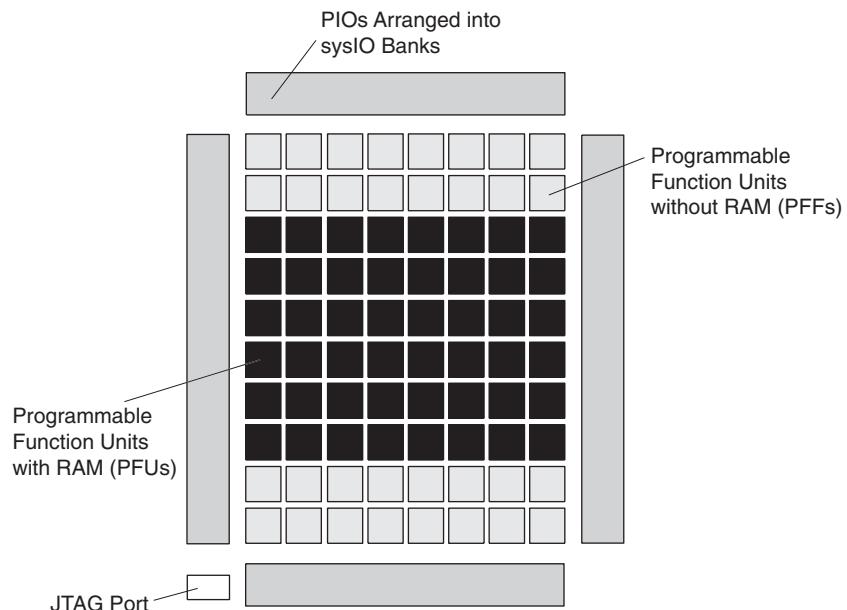

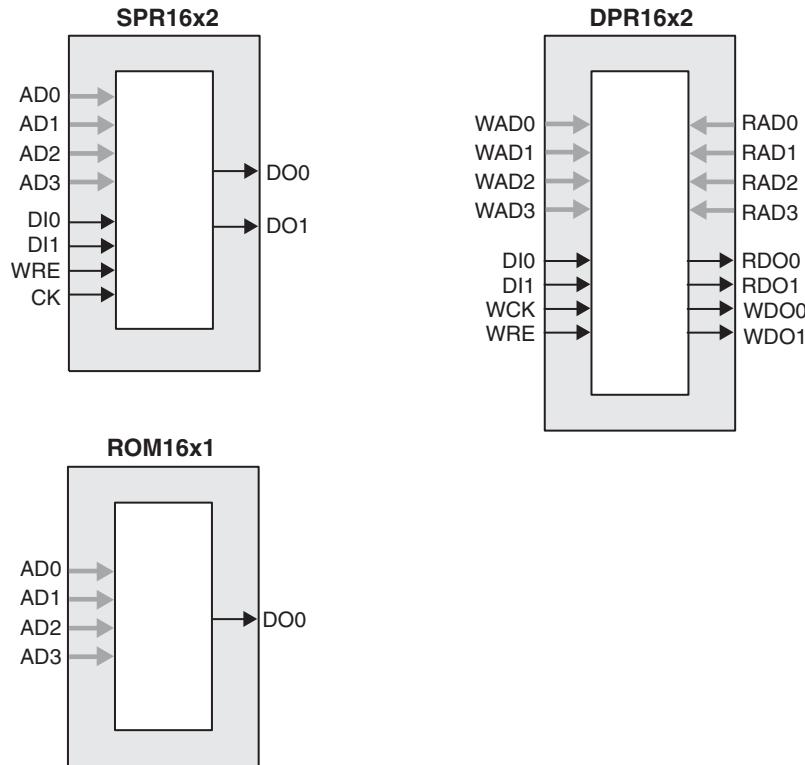

Figure 2-6. Distributed Memory Primitives

ROM Mode: The ROM mode uses the same principal as the RAM modes, but without the Write port. Pre-loading is accomplished through the programming interface during configuration.

PFU Modes of Operation

Slices can be combined within a PFU to form larger functions. Table 2-4 tabulates these modes and documents the functionality possible at the PFU level.

Table 2-4. PFU Modes of Operation

| Logic | Ripple | RAM | ROM |
|-------------------------|-------------------|----------------------------|-------------|
| LUT 4x8 or MUX 2x1 x 8 | 2-bit Add x 4 | SPR16x2 x 4 DPR16x2 x 2 | ROM16x1 x 8 |
| LUT 5x4 or MUX 4x1 x 4 | 2-bit Sub x 4 | SPR16x4 x 2 DPR16x4 x 1 | ROM16x2 x 4 |
| LUT 6x2 or MUX 8x1 x 2 | 2-bit Counter x 4 | SPR16x8 x 1 | ROM16x4 x 2 |
| LUT 7x1 or MUX 16x1 x 1 | 2-bit Comp x 4 | | ROM16x8 x 1 |

Routing

There are many resources provided in the MachXO devices to route signals individually or as buses with related control signals. The routing resources consist of switching circuitry, buffers and metal interconnect (routing) segments.

The inter-PFU connections are made with three different types of routing resources: x1 (spans two PFUs), x2 (spans three PFUs) and x6 (spans seven PFUs). The x1, x2, and x6 connections provide fast and efficient connections in the horizontal and vertical directions.

The EBR memory supports three forms of write behavior for single or dual port operation:

1. **Normal** – data on the output appears only during the read cycle. During a write cycle, the data (at the current address) does not appear on the output. This mode is supported for all data widths.
2. **Write Through** – a copy of the input data appears at the output of the same port. This mode is supported for all data widths.
3. **Read-Before-Write** – when new data is being written, the old contents of the address appears at the output. This mode is supported for x9, x18 and x36 data widths.

FIFO Configuration

The FIFO has a write port with Data-in, CEW, WE and CLKW signals. There is a separate read port with Data-out, RCE, RE and CLKR signals. The FIFO internally generates Almost Full, Full, Almost Empty and Empty Flags. The Full and Almost Full flags are registered with CLKW. The Empty and Almost Empty flags are registered with CLKR. The range of programming values for these flags are in Table 2-7.

Table 2-7. Programmable FIFO Flag Ranges

| Flag Name | Programming Range |
|-------------------|-----------------------|
| Full (FF) | 1 to (up to 2^N-1) |
| Almost Full (AF) | 1 to Full-1 |
| Almost Empty (AE) | 1 to Full-1 |
| Empty (EF) | 0 |

N = Address bit width

The FIFO state machine supports two types of reset signals: RSTA and RSTB. The RSTA signal is a global reset that clears the contents of the FIFO by resetting the read/write pointer and puts the FIFO flags in their initial reset state. The RSTB signal is used to reset the read pointer. The purpose of this reset is to retransmit the data that is in the FIFO. In these applications it is important to keep careful track of when a packet is written into or read from the FIFO.

Memory Core Reset

The memory array in the EBR utilizes latches at the A and B output ports. These latches can be reset asynchronously. RSTA and RSTB are local signals, which reset the output latches associated with Port A and Port B respectively. The Global Reset (GSRN) signal resets both ports. The output data latches and associated resets for both ports are as shown in Figure 2-13.

of the devices also support differential input buffers. PCI clamps are available on the top Bank I/O buffers. The PCI clamp is enabled after V_{CC} , V_{CCAUX} , and V_{CCIO} are at valid operating levels and the device has been configured.

The two pads in the pair are described as “true” and “comp”, where the true pad is associated with the positive side of the differential input buffer and the comp (complementary) pad is associated with the negative side of the differential input buffer.

2. Left and Right sysIO Buffer Pairs

The sysIO buffer pairs in the left and right Banks of the device consist of two single-ended output drivers and two sets of single-ended input buffers (supporting ratioed and absolute input levels). The devices also have a differential driver per output pair. The referenced input buffer can also be configured as a differential input buffer. In these Banks the two pads in the pair are described as “true” and “comp”, where the true pad is associated with the positive side of the differential I/O, and the comp (complementary) pad is associated with the negative side of the differential I/O.

Typical I/O Behavior During Power-up

The internal power-on-reset (POR) signal is deactivated when V_{CC} and V_{CCAUX} have reached satisfactory levels. After the POR signal is deactivated, the FPGA core logic becomes active. It is the user's responsibility to ensure that all V_{CCIO} Banks are active with valid input logic levels to properly control the output logic states of all the I/O Banks that are critical to the application. The default configuration of the I/O pins in a blank device is tri-state with a weak pull-up to V_{CCIO} . The I/O pins will maintain the blank configuration until V_{CC} , V_{CCAUX} and V_{CCIO} have reached satisfactory levels at which time the I/Os will take on the user-configured settings.

The V_{CC} and V_{CCAUX} supply the power to the FPGA core fabric, whereas the V_{CCIO} supplies power to the I/O buffers. In order to simplify system design while providing consistent and predictable I/O behavior, the I/O buffers should be powered up along with the FPGA core fabric. Therefore, V_{CCIO} supplies should be powered up before or together with the V_{CC} and V_{CCAUX} supplies.

Supported Standards

The MachXO sysIO buffer supports both single-ended and differential standards. Single-ended standards can be further subdivided into LVCMOS and LVTTL. The buffer supports the LVTTL, LVCMOS 1.2, 1.5, 1.8, 2.5, and 3.3V standards. In the LVCMOS and LVTTL modes, the buffer has individually configurable options for drive strength, bus maintenance (weak pull-up, weak pull-down, bus-keeper latch or none) and open drain. BLVDS and LVPECL output emulation is supported on all devices. The MachXO1200 and MachXO2280 support on-chip LVDS output buffers on approximately 50% of the I/Os on the left and right Banks. Differential receivers for LVDS, BLVDS and LVPECL are supported on all Banks of MachXO1200 and MachXO2280 devices. PCI support is provided in the top Banks of the MachXO1200 and MachXO2280 devices. Table 2-8 summarizes the I/O characteristics of the devices in the MachXO family.

Tables 2-9 and 2-10 show the I/O standards (together with their supply and reference voltages) supported by the MachXO devices. For further information on utilizing the sysIO buffer to support a variety of standards please see the details of additional technical documentation at the end of this data sheet.

Table 2-8. I/O Support Device by Device

| | MachXO256 | MachXO640 | MachXO1200 | MachXO2280 |
|--|---|---|---|---|
| Number of I/O Banks | 2 | 4 | 8 | 8 |
| Type of Input Buffers | Single-ended (all I/O Banks) | Single-ended (all I/O Banks) | Single-ended (all I/O Banks) Differential Receivers (all I/O Banks) | Single-ended (all I/O Banks) Differential Receivers (all I/O Banks) |
| Types of Output Buffers | Single-ended buffers with complementary outputs (all I/O Banks) | Single-ended buffers with complementary outputs (all I/O Banks) | Single-ended buffers with complementary outputs (all I/O Banks) Differential buffers with true LVDS outputs (50% on left and right side) | Single-ended buffers with complementary outputs (all I/O Banks) Differential buffers with true LVDS outputs (50% on left and right side) |
| Differential Output Emulation Capability | All I/O Banks | All I/O Banks | All I/O Banks | All I/O Banks |
| PCI Support | No | No | Top side only | Top side only |

Table 2-9. Supported Input Standards

| Input Standard | VCCIO (Typ.) | | | | |
|--|--------------|------|------|------|------|

| | | LCMxo1200E | 12 | mA |
| | | LCMxo2280E | 14 | mA |
| I _{CCAUX} | Auxiliary Power Supply V _{CCAUX} = 3.3V | LCMxo256C/E | 8 | mA |
| | | LCMxo640C/E | 10 | mA |
| | | LCMxo1200/E | 15 | mA |
| | | LCMxo2280C/E | 16 | mA |
| I _{CCIO} | Bank Power Supply ⁶ | All devices | 2 | mA |

1. For further information on supply current, please see details of additional technical documentation at the end of this data sheet.
2. Assumes all I/O pins are held at V_{CCIO} or GND.
3. Typical user pattern.
4. JTAG programming is at 25MHz.
5. T_J = 25°C, power supplies at nominal voltage.
6. Per Bank. V_{CCIO} = 2.5V. Does not include pull-up/pull-down.

Typical Building Block Function Performance¹

Pin-to-Pin Performance (LVCMS25 12mA Drive)

| Function | -5 Timing | Units |
|------------------------|-----------|-------|
| Basic Functions | | |
| 16-bit decoder | 6.7 | ns |
| 4:1 MUX | 4.5 | ns |
| 16:1 MUX | 5.1 | ns |

Register-to-Register Performance

| Function | -5 Timing | Units |
|---|-----------|-------|
| Basic Functions | | |
| 16:1 MUX | 487 | MHz |
| 16-bit adder | 292 | MHz |
| 16-bit counter | 388 | MHz |
| 64-bit counter | 200 | MHz |
| Embedded Memory Functions (1200 and 2280 Devices Only) | | |
| 256x36 Single Port RAM | 284 | MHz |
| 512x18 True-Dual Port RAM | 284 | MHz |
| Distributed Memory Functions | | |
| 16x2 Single Port RAM | 434 | MHz |
| 64x2 Single Port RAM | 320 | MHz |
| 128x4 Single Port RAM | 261 | MHz |
| 32x2 Pseudo-Dual Port RAM | 314 | MHz |
| 64x4 Pseudo-Dual Port RAM | 271 | MHz |

1. The above timing numbers are generated using the ispLEVER design tool. Exact performance may vary with device and tool version. The tool uses internal parameters that have been characterized but are not tested on every device.

Rev. A 0.19

Derating Logic Timing

Logic Timing provided in the following sections of the data sheet and the ispLEVER design tools are worst case numbers in the operating range. Actual delays may be much faster. The ispLEVER design tool from Lattice can provide logic timing numbers at a particular temperature and voltage.

1. Pin orientation follows the conventional order from pin 1 marking of the top side view and counter-clockwise.
2. Pin orientation A1 starts from the upper left corner of the top side view with alphabetical order ascending vertically and numerical order ascending horizontally.
3. All grounds must be electrically connected at the board level. For fpBGA and ftBGA packages, the total number of GND balls is less than the actual number of GND logic connections from the die to the common package GND plane.
4. NC pins should not be connected to any active signals, VCC or GND.

*Supports true LVDS outputs.

**NC for "E" devices.

***Primary clock inputs are single-ended.

**LCMXX640, LCMXO1200 and LCMXO2280 Logic Signal Connections:
