Welcome to [E-XFL.COM](#)**Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details

Product Status	Obsolete
Number of LABs/CLBs	285
Number of Logic Elements/Cells	2280
Total RAM Bits	28262
Number of I/O	271
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	324-LBGA
Supplier Device Package	324-FTBGA (19x19)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo2280e-3ft324i

June 2013

Data Sheet DS1002

Features

- **Non-volatile, Infinitely Reconfigurable**
 - Instant-on – powers up in microseconds
 - Single chip, no external configuration memory required
 - Excellent design security, no bit stream to intercept
 - Reconfigure SRAM based logic in milliseconds
 - SRAM and non-volatile memory programmable through JTAG port
 - Supports background programming of non-volatile memory
- **Sleep Mode**
 - Allows up to 100x static current reduction
- **TransFR™ Reconfiguration (TFR)**
 - In-field logic update while system operates
- **High I/O to Logic Density**
 - 256 to 2280 LUT4s
 - 73 to 271 I/Os with extensive package options
 - Density migration supported
 - Lead free/RoHS compliant packaging
- **Embedded and Distributed Memory**
 - Up to 27.6 Kbits sysMEM™ Embedded Block RAM
 - Up to 7.7 Kbits distributed RAM
 - Dedicated FIFO control logic

Table 1-1. MachXO Family Selection Guide

The devices use look-up tables (LUTs) and embedded block memories traditionally associated with FPGAs for flexible and efficient logic implementation. Through non-volatile technology, the devices provide the single-chip, high-security, instant-on capabilities traditionally associated with CPLDs. Finally, advanced process technology and careful design will provide the high pin-to-pin performance also associated with CPLDs.

The ispLEVER® design tools from Lattice allow complex designs to be efficiently implemented using the MachXO family of devices. Popular logic synthesis tools provide synthesis library support for MachXO. The ispLEVER tools use the synthesis tool output along with the constraints from its floor planning tools to place and route the design in the MachXO device. The ispLEVER tool extracts the timing from the routing and back-annotates it into the design for timing verification.

Figure 2-6. Distributed Memory Primitives

ROM Mode: The ROM mode uses the same principal as the RAM modes, but without the Write port. Pre-loading is accomplished through the programming interface during configuration.

PFU Modes of Operation

Slices can be combined within a PFU to form larger functions. Table 2-4 tabulates these modes and documents the functionality possible at the PFU level.

Table 2-4. PFU Modes of Operation

Logic	Ripple	RAM	ROM
LUT 4x8 or MUX 2x1 x 8	2-bit Add x 4	SPR16x2 x 4 DPR16x2 x 2	ROM16x1 x 8
LUT 5x4 or MUX 4x1 x 4	2-bit Sub x 4	SPR16x4 x 2 DPR16x4 x 1	ROM16x2 x 4
LUT 6x2 or MUX 8x1 x 2	2-bit Counter x 4	SPR16x8 x 1	ROM16x4 x 2
LUT 7x1 or MUX 16x1 x 1	2-bit Comp x 4		ROM16x8 x 1

Routing

There are many resources provided in the MachXO devices to route signals individually or as buses with related control signals. The routing resources consist of switching circuitry, buffers and metal interconnect (routing) segments.

The inter-PFU connections are made with three different types of routing resources: x1 (spans two PFUs), x2 (spans three PFUs) and x6 (spans seven PFUs). The x1, x2, and x6 connections provide fast and efficient connections in the horizontal and vertical directions.

Figure 2-18. MachXO2280 Banks

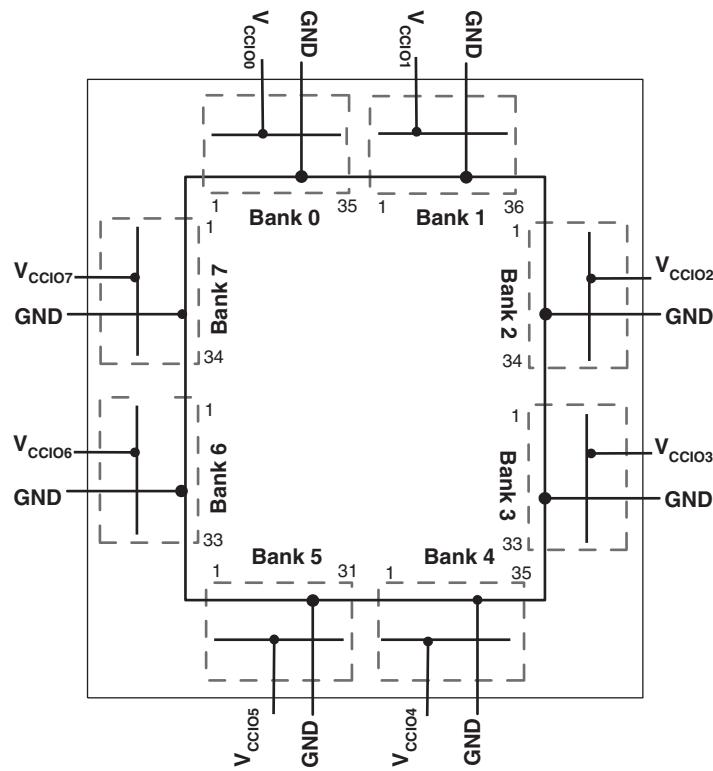

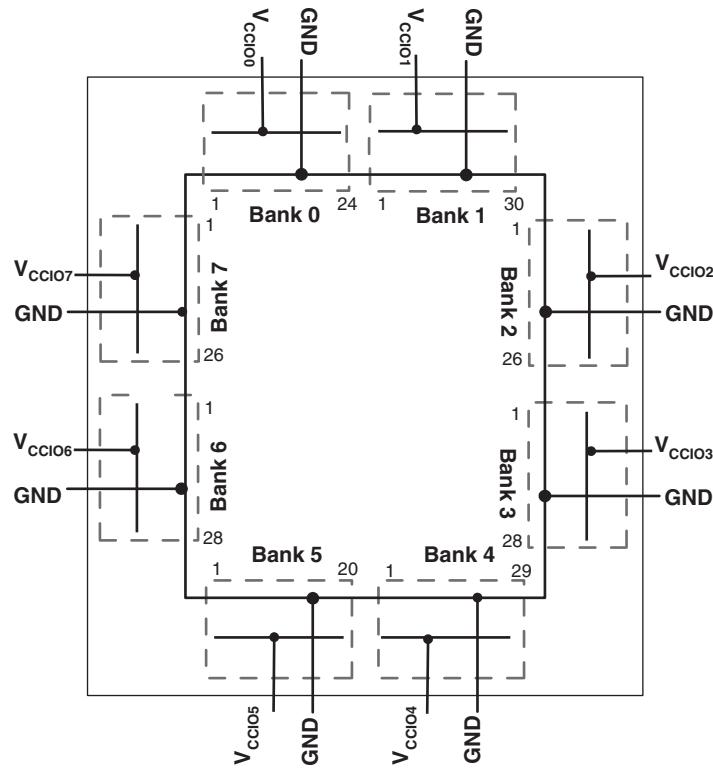

Figure 2-19. MachXO1200 Banks

the system. These capabilities make the MachXO ideal for many multiple power supply and hot-swap applications.

Sleep Mode

The MachXO "C" devices ($V_{CC} = 1.8/2.5/3.3V$) have a sleep mode that allows standby current to be reduced dramatically during periods of system inactivity. Entry and exit to Sleep mode is controlled by the SLEEPN pin.

During Sleep mode, the logic is non-operational, registers and EBR contents are not maintained, and I/Os are tri-stated. Do not enter Sleep mode during device programming or configuration operation. In Sleep mode, power supplies are in their normal operating range, eliminating the need for external switching of power supplies. Table 2-11 compares the characteristics of Normal, Off and Sleep modes.

Table 2-11. Characteristics of Normal, Off and Sleep Modes

Characteristic	Normal	Off	Sleep
SLEEPN Pin	High	—	Low
Static I_{CC}	Typical <10mA	0	Typical <100uA
I/O Leakage	<10 μ A	<1mA	<10 μ A
Power Supplies VCC/VCCIO/VCCAUX	Normal Range	0	Normal Range
Logic Operation	User Defined	Non Operational	Non operational
I/O Operation	User Defined	Tri-state	Tri-state
JTAG and Programming circuitry	Operational	Non-operational	Non-operational
EBR Contents and Registers	Maintained	Non-maintained	Non-maintained

SLEEPN Pin Characteristics

The SLEEPN pin behaves as an LVCMOS input with the voltage standard appropriate to the VCC supply for the device. This pin also has a weak pull-up, along with a Schmidt trigger and glitch filter to prevent false triggering. An external pull-up to VCC is recommended when Sleep Mode is not used to ensure the device stays in normal operation mode. Typically, the device enters sleep mode several hundred nanoseconds after SLEEPN is held at a valid low and restarts normal operation as specified in the Sleep Mode Timing table. The AC and DC specifications portion of this data sheet shows a detailed timing diagram.

Oscillator

Every MachXO device has an internal CMOS oscillator. The oscillator can be routed as an input clock to the clock tree or to general routing resources. The oscillator frequency can be divided by internal logic. There is a dedicated programming bit to enable/disable the oscillator. The oscillator frequency ranges from 18MHz to 26MHz.

Configuration and Testing

The following section describes the configuration and testing features of the MachXO family of devices.

IEEE 1149.1-Compliant Boundary Scan Testability

All MachXO devices have boundary scan cells that are accessed through an IEEE 1149.1 compliant test access port (TAP). This allows functional testing of the circuit board, on which the device is mounted, through a serial scan path that can access all critical logic nodes. Internal registers are linked internally, allowing test data to be shifted in and loaded directly onto test nodes, or test data to be captured and shifted out for verification. The test access port consists of dedicated I/Os: TDI, TDO, TCK and TMS. The test access port shares its power supply with one of the VCCIO Banks (MachXO256: V_{CCIO1} ; MachXO640: V_{CCIO2} ; MachXO1200 and MachXO2280: V_{CCIO5}) and can operate with LVCMOS3.3, 2.5, 1.8, 1.5, and 1.2 standards.

For more details on boundary scan test, please see information regarding additional technical documentation at the end of this data sheet.

sysIO Differential Electrical Characteristics

LVDS

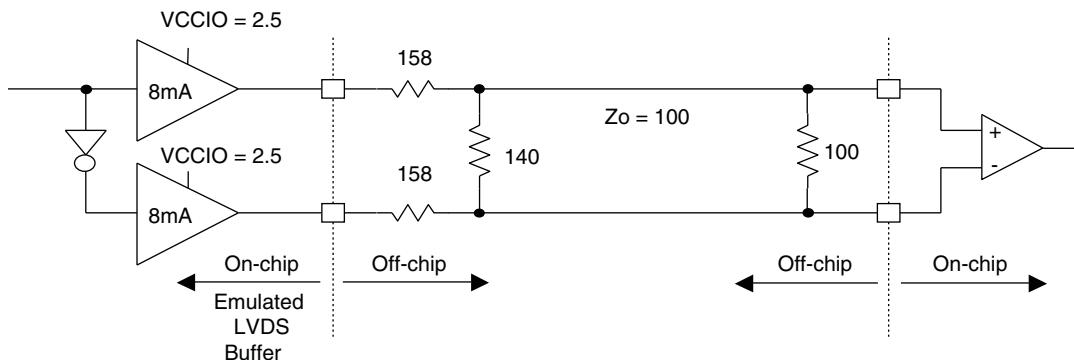

Over Recommended Operating Conditions

Parameter Symbol	Parameter Description	Test Conditions	Min.	Typ.	Max.	Units
V_{INP}, V_{INM}	Input Voltage		0	—	2.4	V
V_{THD}	Differential Input Threshold		+/-100	—	—	mV
V_{CM}	Input Common Mode Voltage	$100\text{mV} \leq V_{THD}$	$V_{THD}/2$	1.2	1.8	V
		$200\text{mV} \leq V_{THD}$	$V_{THD}/2$	1.2	1.9	V
		$350\text{mV} \leq V_{THD}$	$V_{THD}/2$	1.2	2.0	V
I_{IN}	Input current	Power on	—	—	+/-10	μA
V_{OH}	Output high voltage for V_{OP} or V_{OM}	$R_T = 100 \text{ Ohm}$	—	1.38	1.60	V
V_{OL}	Output low voltage for V_{OP} or V_{OM}	$R_T = 100 \text{ Ohm}$	0.9V	1.03	—	V

ΔV_{OD}	Change in V_{OD} between high and low		—	—	50	mV
V_{OS}	Output voltage offset	$(V_{OP} - V_{OM})/2, R_T = 100 \text{ Ohm}$	1.125	1.25	1.375	V
ΔV_{OS}	Change in V_{OS} between H and L		—	—	50	mV
I_{OSD}	Output short circuit current	$V_{OD} = 0\text{V}$ Driver outputs shorted	—	—	6	mA

LVDS Emulation

MachXO devices can support LVDS outputs via emulation (LVDS25E), in addition to the LVDS support that is available on-chip on certain devices. The output is emulated using complementary LVCMS outputs in conjunction with resistors across the driver outputs on all devices. The scheme shown in Figure 3-1 is one possible solution for LVDS standard implementation. Resistor values in Figure 3-1 are industry standard values for 1% resistors.

Figure 3-1. LVDS Using External Resistors (LVDS25E)

Note: All resistors are $\pm 1\%$.

The LVDS differential input buffers are available on certain devices in the MachXO family.

Typical Building Block Function Performance¹

Pin-to-Pin Performance (LVCMS25 12mA Drive)

Function	-5 Timing	Units
Basic Functions		
16-bit decoder	6.7	ns
4:1 MUX	4.5	ns
16:1 MUX	5.1	ns

Register-to-Register Performance

Function	-5 Timing	Units
Basic Functions		
16:1 MUX	487	MHz
16-bit adder	292	MHz
16-bit counter	388	MHz
64-bit counter	200	MHz
Embedded Memory Functions (1200 and 2280 Devices Only)		
256x36 Single Port RAM	284	MHz
512x18 True-Dual Port RAM	284	MHz
Distributed Memory Functions		
16x2 Single Port RAM	434	MHz
64x2 Single Port RAM	320	MHz
128x4 Single Port RAM	261	MHz
32x2 Pseudo-Dual Port RAM	314	MHz
64x4 Pseudo-Dual Port RAM	271	MHz

1. The above timing numbers are generated using the ispLEVER design tool. Exact performance may vary with device and tool version. The tool uses internal parameters that have been characterized but are not tested on every device.

Rev. A 0.19

Derating Logic Timing

Logic Timing provided in the following sections of the data sheet and the ispLEVER design tools are worst case numbers in the operating range. Actual delays may be much faster. The ispLEVER design tool from Lattice can provide logic timing numbers at a particular temperature and voltage.

NC ⁴			—

1. Pin orientation follows the conventional order from pin 1 marking of the top side view and counter-clockwise.
2. Pin orientation A1 starts from the upper left corner of the top side view with alphabetical order ascending vertically and numerical order ascending horizontally.
3. All grounds must be electrically connected at the board level. For fpBGA and ftBGA packages, the total number of GND balls is less than the actual number of GND logic connections from the die to the common package GND plane.
4. NC pins should not be connected to any active signals, VCC or GND.

Data Sheet DS1002

Part Number Description

Ordering Information

Note: MachXO devices are dual marked except the slowest commercial speed grade device.
For example the commercial speed grade LCMXO640E-4F256C is also marked with industrial grade -3I grade.
The slowest commercial speed grade does not have industrial markings.
The markings appears as follows:

Lead-Free Packaging
Commercial

Part Number	LUTs	Supply Voltage	I/Os	Grade	Package	Pins	Temp.

MachXO Family Data Sheet

Revision History

June 2013

Data Sheet DS1002

Revision History

Date	Version	Section	Change Summary
February 2005	01.0	—	Initial release.
October 2005	01.1	Introduction	Distributed RAM information in family table updated. Added footnote 1 - fpBGA packaging to the family selection guide.
		Architecture	sysIO Buffer section updated.
			Hot Socketing section updated.
			Sleep Mode section updated.
			SLEEP Pin Characteristics section updated.
			Oscillator section updated.
		DC and Switching Characteristics	Security section updated.
			Recommended Operating Conditions table updated.
			DC Electrical Characteristics table updated.
			Supply Current (Sleep Mode) table added with LCMXO256/640 data.
			Supply Current (Standby) table updated with LCMXO256/640 data.
			Initialization Supply Current table updated with LCMXO256/640 data.
			Programming and Erase Flash Supply Current table updated with LCMXO256/640 data.
			Register-to-Register Performance table updated (rev. A 0.16).
			External Switching Characteristics table updated (rev. A 0.16).
			Internal Timing Parameter table updated (rev. A 0.16).
			Family Timing Adders updated (rev. A 0.16).
			sysCLOCK Timingupdated (rev. A 0.16).
			MachXO "C" Sleep Mode Timing updated (A 0.16).
		Pinout Information	JTAG Port Timing Specification updated (rev. A 0.16).
			SLEEPIN description updated.
			Pin Information Summary updated.
			Power Supply and NC Connection table has been updated.
		Ordering Information	Logic Signal Connection section has been updated to include all devices/packages.
			Part Number Description section has been updated.
			Ordering Part Number section has been updated (added LCMXO256C/ LCMXO640C "4W").
		Supplemental Information	MachXO Density Migration Technical Note (TN1097) added.
November 2005	01.2	Pinout Information	Added "Power Supply and NC Connections" summary information for LCMXO1200 and LCMXO2280 in 100 TQFP package.
December 2005	01.3	DC and Switching Characteristics	Supply Current (Standby) table updated with LCMXO1200/2280 data.
		Ordering Information	Ordering Part Number section updated (added LCMXO2280C "4W").
April 2006	02.0	Introduction	Introduction paragraphs updated.
		Architecture	Architecture Overview paragraphs updated.
