Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Details

Product Status	Active
Number of LABs/CLBs	285
Number of Logic Elements/Cells	2280
Total RAM Bits	28262
Number of I/O	113
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	144-LQFP
Supplier Device Package	144-TQFP (20x20)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo2280e-3tn144c

Features

- **Non-volatile, Infinitely Reconfigurable**
 - Instant-on – powers up in microseconds
 - Single chip, no external configuration memory required
 - Excellent design security, no bit stream to intercept
 - Reconfigure SRAM based logic in milliseconds
 - SRAM and non-volatile memory programmable through JTAG port
 - Supports background programming of non-volatile memory
- **Sleep Mode**
 - Allows up to 100x static current reduction
- **TransFR™ Reconfiguration (TFR)**
 - In-field logic update while system operates
- **High I/O to Logic Density**
 - 256 to 2280 LUT4s
 - 73 to 271 I/Os with extensive package options
 - Density migration supported
 - Lead free/RoHS compliant packaging
- **Embedded and Distributed Memory**
 - Up to 27.6 Kbits sysMEM™ Embedded Block RAM
 - Up to 7.7 Kbits distributed RAM
 - Dedicated FIFO control logic

- **Flexible I/O Buffer**
 - Programmable sysIO™ buffer supports wide range of interfaces:
 - LVCMOS 3.3/2.5/1.8/1.5/1.2
 - LVTTTL
 - PCI
 - LVDS, Bus-LVDS, LVPECL, RSDS
- **sysCLOCK™ PLLs**
 - Up to two analog PLLs per device
 - Clock multiply, divide, and phase shifting
- **System Level Support**
 - IEEE Standard 1149.1 Boundary Scan
 - Onboard oscillator
 - Devices operate with 3.3V, 2.5V, 1.8V or 1.2V power supply
 - IEEE 1532 compliant in-system programming

Introduction

The MachXO is optimized to meet the requirements of applications traditionally addressed by CPLDs and low capacity FPGAs: glue logic, bus bridging, bus interfacing, power-up control, and control logic. These devices bring together the best features of CPLD and FPGA devices on a single chip.

Table 1-1. MachXO Family Selection Guide

Device	LCMXO256	LCMXO640	LCMXO1200	LCMXO2280
LUTs	256	640	1200	2280
Dist. RAM (Kbits)	2.0	6.1	6.4	7.7
EBR SRAM (Kbits)	0	0	9.2	27.6
Number of EBR SRAM Blocks (9 Kbits)	0	0	1	3
V _{CC} Voltage	1.2/1.8/2.5/3.3V	1.2/1.8/2.5/3.3V	1.2/1.8/2.5/3.3V	1.2/1.8/2.5/3.3V
Number of PLLs	0	0	1	2
Max. I/O	78	159	211	271
Packages				
100-pin TQFP (14x14 mm)	78	74	73	73
144-pin TQFP (20x20 mm)		113	113	113
100-ball csBGA (8x8 mm)	78	74		
132-ball csBGA (8x8 mm)		101	101	101
256-ball caBGA (14x14 mm)		159	211	211
256-ball ftBGA (17x17 mm)		159	211	211
324-ball ftBGA (19x19 mm)				271

Figure 2-8. Primary Clocks for MachXO1200 and MachXO2280 Devices

Four secondary clocks are generated from four 16:1 muxes as shown in Figure 2-9. Four of the secondary clock sources come from dual function clock pins and 12 come from internal routing.

Figure 2-9. Secondary Clocks for MachXO Devices

sysCLOCK Phase Locked Loops (PLLs)

The MachXO1200 and MachXO2280 provide PLL support. The source of the PLL input divider can come from an external pin or from internal routing. There are four sources of feedback signals to the feedback divider: from CLKINTFB (internal feedback port), from the global clock nets, from the output of the post scalar divider, and from the routing (or from an external pin). There is a PLL_LOCK signal to indicate that the PLL has locked on to the input clock signal. Figure 2-10 shows the sysCLOCK PLL diagram.

The setup and hold times of the device can be improved by programming a delay in the feedback or input path of the PLL which will advance or delay the output clock with reference to the input clock. This delay can be either programmed during configuration or can be adjusted dynamically. In dynamic mode, the PLL may lose lock after adjustment and not relock until the t_{LOCK} parameter has been satisfied. Additionally, the phase and duty cycle block allows the user to adjust the phase and duty cycle of the CLKOS output.

The sysCLOCK PLLs provide the ability to synthesize clock frequencies. Each PLL has four dividers associated with it: input clock divider, feedback divider, post scalar divider, and secondary clock divider. The input clock divider is used to divide the input clock signal, while the feedback divider is used to multiply the input clock signal. The post scalar divider allows the VCO to operate at higher frequencies than the clock output, thereby increasing the frequency range. The secondary divider is used to derive lower frequency outputs.

Figure 2-10. PLL Diagram

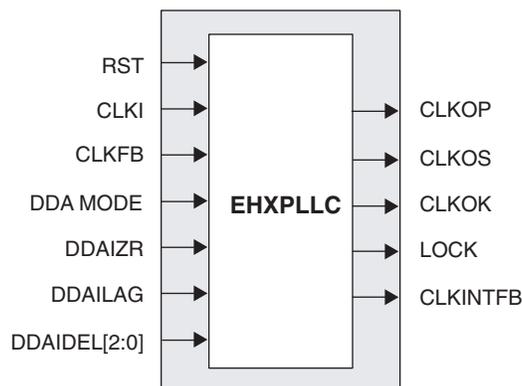

Figure 2-11 shows the available macros for the PLL. Table 2-5 provides signal description of the PLL Block.

Figure 2-11. PLL Primitive

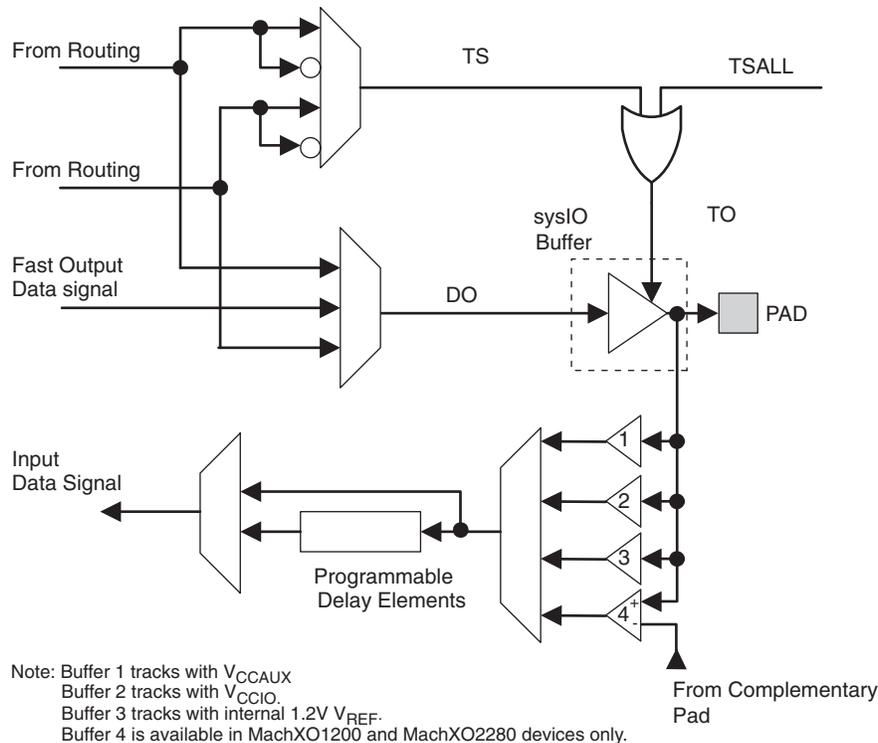

output data signals are multiplexed and provide a single signal to the I/O pin via the sysIO buffer. Figure 2-17 shows the MachXO PIO logic.

The tristate control signal is multiplexed from the output data signals and their complements. In addition a global signal (TSALL) from a dedicated pad can be used to tristate the sysIO buffer.

The PIO receives an input signal from the pin via the sysIO buffer and provides this signal to the core of the device. In addition there are programmable elements that can be utilized by the design tools to avoid positive hold times.

Figure 2-17. MachXO PIO Block Diagram

sysIO Buffer

Each I/O is associated with a flexible buffer referred to as a sysIO buffer. These buffers are arranged around the periphery of the device in groups referred to as Banks. The sysIO buffers allow users to implement the wide variety of standards that are found in today's systems including LVCMOS, TTL, BLVDS, LVDS and LVPECL.

In the MachXO devices, single-ended output buffers and ratioed input buffers (LVTTTL, LVCMOS and PCI) are powered using V_{CCIO}. In addition to the Bank V_{CCIO} supplies, the MachXO devices have a V_{CC} core logic power supply, and a V_{CCAUX} supply that powers up a variety of internal circuits including all the differential and referenced input buffers.

MachXO256 and MachXO640 devices contain single-ended input buffers and single-ended output buffers with complementary outputs on all the I/O Banks.

MachXO1200 and MachXO2280 devices contain two types of sysIO buffer pairs.

1. Top and Bottom sysIO Buffer Pairs

The sysIO buffer pairs in the top and bottom Banks of the device consist of two single-ended output drivers and two sets of single-ended input buffers (for ratioed or absolute input levels). The I/O pairs on the top and bottom

Supply Current (Sleep Mode)^{1, 2}

Symbol	Parameter	Device	Typ. ³	Max.	Units

NC ⁴			—

1. Pin orientation follows the conventional order from pin 1 marking of the top side view and counter-clockwise.
2. Pin orientation A1 starts from the upper left corner of the top side view with alphabetical order ascending vertically and numerical order ascending horizontally.
3. All grounds must be electrically connected at the board level. For fpBGA and ftBGA packages, the total number of GND balls is less than the actual number of GND logic connections from the die to the common package GND plane.
4. NC pins should not be connected to any active signals, VCC or GND.

*Supports true LVDS outputs.

**NC for "E" devices.

***Primary clock inputs are single-ended.

Part Number Description

Ordering Information

Note: MachXO devices are dual marked except the slowest commercial speed grade device. For example the commercial speed grade LCMXO640E-4F256C is also marked with industrial grade -3I grade. The slowest commercial speed grade does not have industrial markings. The markings appears as follows:

Conventional Packaging
Commercial

Part Number	LUTs	Supply Voltage	I/Os	Grade	Package	Pins	Temp.

Revision History

Date	Version	Section	Change Summary
February 2005	01.0	—	Initial release.
October 2005	01.1	Introduction	Distributed RAM information in family table updated. Added footnote 1 - fpBGA packaging to the family selection guide.
		Architecture	sysIO Buffer section updated.
			Hot Socketing section updated.
			Sleep Mode section updated.
			SLEEP Pin Characteristics section updated.
			Oscillator section updated.
			Security section updated.
		DC and Switching Characteristics	Recommended Operating Conditions table updated.
			DC Electrical Characteristics table updated.
			Supply Current (Sleep Mode) table added with LCMXO256/640 data.
			Supply Current (Standby) table updated with LCMXO256/640 data.
			Initialization Supply Current table updated with LCMXO256/640 data.
			Programming and Erase Flash Supply Current table updated with LCMXO256/640 data.
			Register-to-Register Performance table updated (rev. A 0.16).
			External Switching Characteristics table updated (rev. A 0.16).
			Internal Timing Parameter table updated (rev. A 0.16).
			Family Timing Adders updated (rev. A 0.16).
			sysCLOCK Timing updated (rev. A 0.16).
			MachXO "C" Sleep Mode Timing updated (A 0.16).
			JTAG Port Timing Specification updated (rev. A 0.16).
		Pinout Information	SLEEPIN description updated.
			Pin Information Summary updated.
			Power Supply and NC Connection table has been updated.
Logic Signal Connection section has been updated to include all devices/packages.			
Ordering Information	Part Number Description section has been updated.		
	Ordering Part Number section has been updated (added LCMXO256C/LCMXO640C "4W").		
Supplemental Information	MachXO Density Migration Technical Note (TN1097) added.		
November 2005	01.2	Pinout Information	Added "Power Supply and NC Connections" summary information for LCMXO1200 and LCMXO2280 in 100 TQFP package.
December 2005	01.3	DC and Switching Characteristics	Supply Current (Standby) table updated with LCMXO1200/2280 data.
		Ordering Information	Ordering Part Number section updated (added LCMXO2280C "4W").
April 2006	02.0	Introduction	Introduction paragraphs updated.
		Architecture	Architecture Overview paragraphs updated.

Date	Version	Section	Change Summary
April 2006 (cont.)	02.0 (cont.)	Architecture (cont.)	"Top View of the MachXO1200 Device" figure updated.
			"Top View of the MachXO640 Device" figure updated.
			"Top View of the MachXO256 Device" figure updated.
			"Slice Diagram" figure updated.
			Slice Signal Descriptions table updated.
			Routing section updated.
			sysCLOCK Phase Locked Loops (PLLs) section updated.
			PLL Diagram updated.
			PLL Signal Descriptions table updated.
			sysMEM Memory section has been updated.
			PIO Groups section has been updated.
			PIO section has been updated.
			MachXO PIO Block Diagram updated.
			Supported Input Standards table updated.
		MachXO Configuration and Programming diagram updated.	
		DC and Switching Characteristics	Recommended Operating Conditions table - footnotes updated.
			MachXO256 and MachXO640 Hot Socketing Specifications - footnotes updated.
			Added MachXO1200 and MachXO2280 Hot Socketing Specifications table.
			DC Electrical Characteristics, footnotes have been updated.
			Supply Current (Sleep Mode) table has been updated, removed "4W" references. Footnotes have been updated.
			Supply Current (Standby) table and associated footnotes updated.
			Initialization Supply Current table and footnotes updated.
			Programming and Erase Flash Supply Current table and associated footnotes have been updated.
			Register-to-Register Performance table updated (rev. A 0.19).
			MachXO External Switching Characteristics updated (rev. A 0.19).
			MachXO Internal Timing Parameters updated (rev. A 0.19).
			MachXO Family Timing Adders updated (rev. A 0.19).
			sysCLOCK Timing updated (rev. A 0.19).
			MachXO "C" Sleep Mode Timing updated (A 0.19).
		JTAG Port Timing Specification updated (rev. A 0.19).	
		Test Fixture Required Components table updated.	
		Pinout Information	Signal Descriptions have been updated.
			Pin Information Summary has been updated. Footnote has been added.
Power Supply and NC Connection table has been updated.			
Logic Signal Connections have been updated (PCLKTx_x --> PCLKx_x)			
Ordering Information	Removed "4W" references.		
	Added 256-ftBGA Ordering Part Numbers for MachXO640.		
May 2006	02.1	Pinout Information	Removed [LOC][0]_PLL_RST from Signal Description table.
			PCLK footnote has been added to all appropriate pins.
August 2006	02.2	Multiple	Removed 256 fpBGA information for MachXO640.
