Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Details

Product Status	Obsolete
Number of LABs/CLBs	32
Number of Logic Elements/Cells	256
Total RAM Bits	-
Number of I/O	78
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	100-LQFP
Supplier Device Package	100-TQFP (14x14)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo256e-3t100c

Modes of Operation

Each Slice is capable of four modes of operation: Logic, Ripple, RAM, and ROM. The Slice in the PFF is capable of all modes except RAM. Table 2-2 lists the modes and the capability of the Slice blocks.

Table 2-2. Slice Modes

	Logic	Ripple	RAM	ROM
PFU Slice	LUT 4x2 or LUT 5x1	2-bit Arithmetic Unit	SP 16x2	ROM 16x1 x 2
PFF Slice	LUT 4x2 or LUT 5x1	2-bit Arithmetic Unit	N/A	ROM 16x1 x 2

Logic Mode: In this mode, the LUTs in each Slice are configured as 4-input combinatorial lookup tables (LUT4). A LUT4 can have 16 possible input combinations. Any logic function with four inputs can be generated by programming this lookup table. Since there are two LUT4s per Slice, a LUT5 can be constructed within one Slice. Larger lookup tables such as LUT6, LUT7, and LUT8 can be constructed by concatenating other Slices.

Ripple Mode: Ripple mode allows the efficient implementation of small arithmetic functions. In ripple mode, the following functions can be implemented by each Slice:

- Addition 2-bit
- Subtraction 2-bit
- Add/Subtract 2-bit using dynamic control
- Up counter 2-bit
- Down counter 2-bit
- Ripple mode multiplier building block
- Comparator functions of A and B inputs
 - A greater-than-or-equal-to B
 - A not-equal-to B
 - A less-than-or-equal-to B

Two additional signals, Carry Generate and Carry Propagate, are generated per Slice in this mode, allowing fast arithmetic functions to be constructed by concatenating Slices.

RAM Mode: In this mode, distributed RAM can be constructed using each LUT block as a 16x2-bit memory. Through the combination of LUTs and Slices, a variety of different memories can be constructed.

The ispLEVER design tool supports the creation of a variety of different size memories. Where appropriate, the software will construct these using distributed memory primitives that represent the capabilities of the PFU. Table 2-3 shows the number of Slices required to implement different distributed RAM primitives. Figure 2-6 shows the distributed memory primitive block diagrams. Dual port memories involve the pairing of two Slices. One Slice functions as the read-write port, while the other companion Slice supports the read-only port. For more information on RAM mode in MachXO devices, please see details of additional technical documentation at the end of this data sheet.

Table 2-3. Number of Slices Required For Implementing Distributed RAM

	SPR16x2	DPR16x2
Number of Slices	1	2

Note: SPR = Single Port RAM, DPR = Dual Port RAM

sysCLOCK Phase Locked Loops (PLLs)

The MachXO1200 and MachXO2280 provide PLL support. The source of the PLL input divider can come from an external pin or from internal routing. There are four sources of feedback signals to the feedback divider: from CLKINTFB (internal feedback port), from the global clock nets, from the output of the post scalar divider, and from the routing (or from an external pin). There is a PLL_LOCK signal to indicate that the PLL has locked on to the input clock signal. Figure 2-10 shows the sysCLOCK PLL diagram.

The setup and hold times of the device can be improved by programming a delay in the feedback or input path of the PLL which will advance or delay the output clock with reference to the input clock. This delay can be either programmed during configuration or can be adjusted dynamically. In dynamic mode, the PLL may lose lock after adjustment and not relock until the t_{LOCK} parameter has been satisfied. Additionally, the phase and duty cycle block allows the user to adjust the phase and duty cycle of the CLKOS output.

The sysCLOCK PLLs provide the ability to synthesize clock frequencies. Each PLL has four dividers associated with it: input clock divider, feedback divider, post scalar divider, and secondary clock divider. The input clock divider is used to divide the input clock signal, while the feedback divider is used to multiply the input clock signal. The post scalar divider allows the VCO to operate at higher frequencies than the clock output, thereby increasing the frequency range. The secondary divider is used to derive lower frequency outputs.

Figure 2-10. PLL Diagram

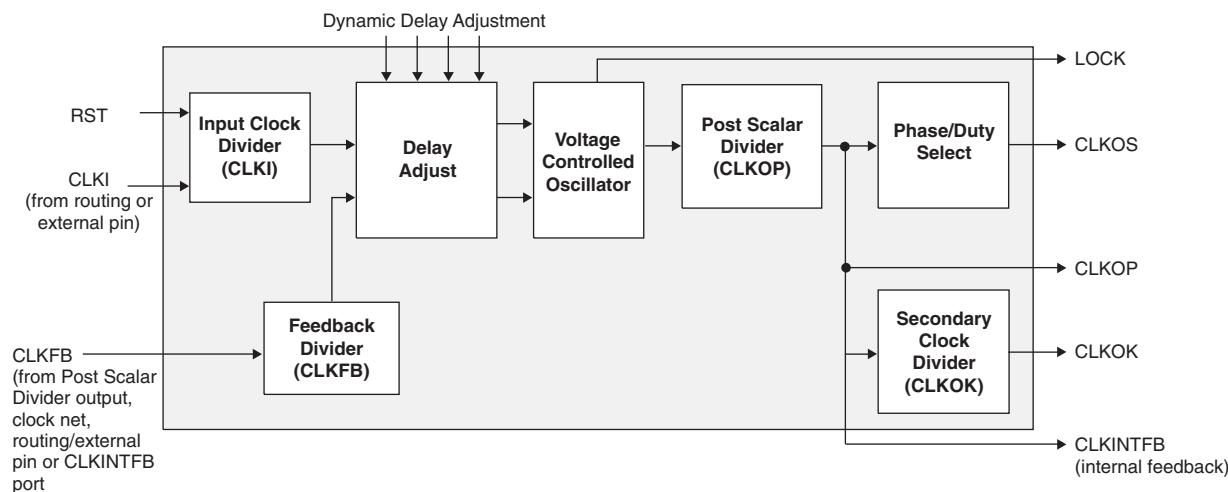

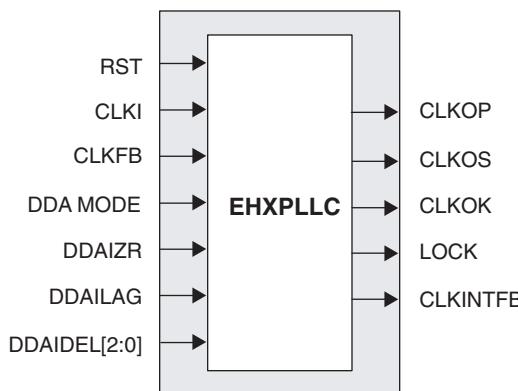

Figure 2-11 shows the available macros for the PLL. Table 2-5 provides signal description of the PLL Block.

Figure 2-11. PLL Primitive

PIO Groups

On the MachXO devices, PIO cells are assembled into two different types of PIO groups, those with four PIO cells and those with six PIO cells. PIO groups with four IOs are placed on the left and right sides of the device while PIO groups with six IOs are placed on the top and bottom. The individual PIO cells are connected to their respective sysIO buffers and PADs.

On all MachXO devices, two adjacent PIOs can be joined to provide a complementary Output driver pair. The I/O pin pairs are labeled as "T" and "C" to distinguish between the true and complement pins.

The MachXO1200 and MachXO2280 devices contain enhanced I/O capability. All PIO pairs on these larger devices can implement differential receivers. In addition, half of the PIO pairs on the left and right sides of these devices can be configured as LVDS transmit/receive pairs. PIOs on the top of these larger devices also provide PCI support.

Figure 2-15. Group of Four Programmable I/O Cells

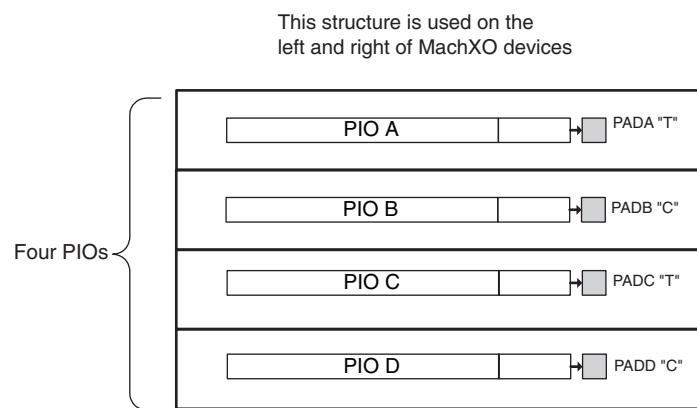

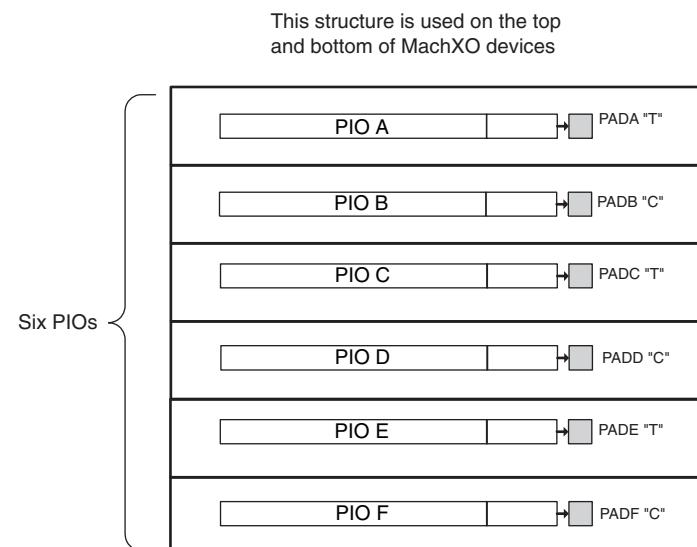

Figure 2-16. Group of Six Programmable I/O Cells

PIO

The PIO blocks provide the interface between the sysIO buffers and the internal PFU array blocks. These blocks receive output data from the PFU array and a fast output data signal from adjacent PFUs. The output data and fast

MachXO Internal Timing Parameters¹

Over Recommended Operating Conditions

Parameter	Description	-5		-4		-3		Units
		Min.	Max.	Min.	Max.	Min.	Max.	
PFU/PFF Logic Mode Timing								
t _{LUT4_PFU}	LUT4 delay (A to D inputs to F output)	—	0.28	—	0.34	—	0.39	ns

NC ⁴			—

1. Pin orientation follows the conventional order from pin 1 marking of the top side view and counter-clockwise.
2. Pin orientation A1 starts from the upper left corner of the top side view with alphabetical order ascending vertically and numerical order ascending horizontally.
3. All grounds must be electrically connected at the board level. For fpBGA and ftBGA packages, the total number of GND balls is less than the actual number of GND logic connections from the die to the common package GND plane.
4. NC pins should not be connected to any active signals, VCC or GND.

1. Pin orientation A1 starts from the upper left corner of the top side view with alphabetical order ascending vertically and numerical order ascending horizontally.
2. All grounds must be electrically connected at the board level. For fpBGA and ftBGA packages, the total number of GND balls is less than the actual number of GND logic connections from the die to the common package GND plane.
3. NC pins should not be connected to any active signals, VCC or GND.

* Supports true LVDS outputs.

** NC for "E" devices.

*** Primary clock inputs are single-ended.

Date	Version	Section	Change Summary
April 2006 (cont.)	02.0 (cont.)	Architecture (cont.)	<p>"Top View of the MachXO1200 Device" figure updated.</p> <p>"Top View of the MachXO640 Device" figure updated.</p> <p>"Top View of the MachXO256 Device" figure updated.</p> <p>"Slice Diagram" figure updated.</p> <p>Slice Signal Descriptions table updated.</p> <p>Routing section updated.</p> <p>sysCLOCK Phase Locked Loops (PLLs) section updated.</p> <p>PLL Diagram updated.</p> <p>PLL Signal Descriptions table updated.</p> <p>sysMEM Memory section has been updated.</p> <p>PIO Groups section has been updated.</p> <p>PIO section has been updated.</p> <p>MachXO PIO Block Diagram updated.</p> <p>Supported Input Standards table updated.</p> <p>MachXO Configuration and Programming diagram updated.</p>
		DC and Switching Characteristics	<p>Recommended Operating Conditions table - footnotes updated.</p> <p>MachXO256 and MachXO640 Hot Socketing Specifications - footnotes updated.</p> <p>Added MachXO1200 and MachXO2280 Hot Socketing Specifications table.</p> <p>DC Electrical Characteristics, footnotes have been updated.</p> <p>Supply Current (Sleep Mode) table has been updated, removed "4W" references. Footnotes have been updated.</p> <p>Supply Current (Standby) table and associated footnotes updated.</p> <p>Initialization Supply Current table and footnotes updated.</p> <p>Programming and Erase Flash Supply Current table and associated footnotes have been updated.</p> <p>Register-to-Register Performance table updated (rev. A 0.19).</p> <p>MachXO External Switching Characteristics updated (rev. A 0.19).</p> <p>MachXO Internal Timing Parameters updated (rev. A 0.19).</p> <p>MachXO Family Timing Adders updated (rev. A 0.19).</p> <p>sysCLOCK Timing updated (rev. A 0.19).</p> <p>MachXO "C" Sleep Mode Timing updated (A 0.19).</p> <p>JTAG Port Timing Specification updated (rev. A 0.19).</p> <p>Test Fixture Required Components table updated.</p>
		Pinout Information	<p>Signal Descriptions have been updated.</p> <p>Pin Information Summary has been updated. Footnote has been added.</p> <p>Power Supply and NC Connection table has been updated.</p> <p>Logic Signal Connections have been updated (PCLKTx_x --> PCLKx_x)</p>
		Ordering Information	<p>Removed "4W" references.</p> <p>Added 256-ftBGA Ordering Part Numbers for MachXO640.</p>
May 2006	02.1	Pinout Information	<p>Removed [LOC][0]_PLL_RST from Signal Description table.</p> <p>PCLK footnote has been added to all appropriate pins.</p>
August 2006	02.2	Multiple	Removed 256 fpBGA information for MachXO640.
