Lattice Semiconductor Corporation - LCMXO640E-3T144I Datasheet

Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Obsolete
Number of LABs/CLBs	80
Number of Logic Elements/Cells	640
Total RAM Bits	-
Number of I/O	113
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	144-LQFP
Supplier Device Package	144-TQFP (20x20)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo640e-3t144i

The devices use look-up tables (LUTs) and embedded block memories traditionally associated with FPGAs for flexible and efficient logic implementation. Through non-volatile technology, the devices provide the single-chip, high-security, instant-on capabilities traditionally associated with CPLDs. Finally, advanced process technology and careful design will provide the high pin-to-pin performance also associated with CPLDs.

The ispLEVER® design tools from Lattice allow complex designs to be efficiently implemented using the MachXO family of devices. Popular logic synthesis tools provide synthesis library support for MachXO. The ispLEVER tools use the synthesis tool output along with the constraints from its floor planning tools to place and route the design in the MachXO device. The ispLEVER tool extracts the timing from the routing and back-annotates it into the design for timing verification.

MachXO Family Data Sheet Architecture

June 2013 Data Sheet DS1002

Architecture Overview

The MachXO family architecture contains an array of logic blocks surrounded by Programmable I/O (PIO). Some devices in this family have sysCLOCK PLLs and blocks of sysMEM™ Embedded Block RAM (EBRs). Figures 2-1, 2-2, and 2-3 show the block diagrams of the various family members.

The logic blocks are arranged in a two-dimensional grid with rows and columns. The EBR blocks are arranged in a column to the left of the logic array. The PIO cells are located at the periphery of the device, arranged into Banks. The PIOs utilize a flexible I/O buffer referred to as a sysIO interface that supports operation with a variety of interface standards. The blocks are connected with many vertical and horizontal routing channel resources. The place and route software tool automatically allocates these routing resources.

There are two kinds of logic blocks, the Programmable Functional Unit (PFU) and the Programmable Functional unit without RAM (PFF). The PFU contains the building blocks for logic, arithmetic, RAM, ROM, and register functions. The PFF block contains building blocks for logic, arithmetic, ROM, and register functions. Both the PFU and PFF blocks are optimized for flexibility, allowing complex designs to be implemented quickly and effectively. Logic blocks are arranged in a two-dimensional array. Only one type of block is used per row.

In the MachXO family, the number of sysIO Banks varies by device. There are different types of I/O Buffers on different Banks. See the details in later sections of this document. The sysMEM EBRs are large, dedicated fast memory blocks; these blocks are found only in the larger devices. These blocks can be configured as RAM, ROM or FIFO. FIFO support includes dedicated FIFO pointer and flag “hard” control logic to minimize LUT use.

The MachXO registers in PFU and sysI/O can be configured to be SET or RESET. After power up and device is configured, the device enters into user mode with these registers SET/RESET according to the configuration setting, allowing device entering to a known state for predictable system function.

The MachXO architecture provides up to two sysCLOCK™ Phase Locked Loop (PLL) blocks on larger devices. These blocks are located at either end of the memory blocks. The PLLs have multiply, divide, and phase shifting capabilities that are used to manage the frequency and phase relationships of the clocks.

Every device in the family has a JTAG Port that supports programming and configuration of the device as well as access to the user logic. The MachXO devices are available for operation from 3.3V, 2.5V, 1.8V, and 1.2V power supplies, providing easy integration into the overall system.

The ispLEVER design tool takes the output of the synthesis tool and places and routes the design. Generally, the place and route tool is completely automatic, although an interactive routing editor is available to optimize the design.

Clock/Control Distribution Network

The MachXO family of devices provides global signals that are available to all PFUs. These signals consist of four primary clocks and four secondary clocks. Primary clock signals are generated from four 16:1 muxes as shown in Figure 2-7 and Figure 2-8. The available clock sources for the MachXO256 and MachXO640 devices are four dual function clock pins and 12 internal routing signals. The available clock sources for the MachXO1200 and MachXO2280 devices are four dual function clock pins, up to nine internal routing signals and up to six PLL outputs.

Figure 2-7. Primary Clocks for MachXO256 and MachXO640 Devices

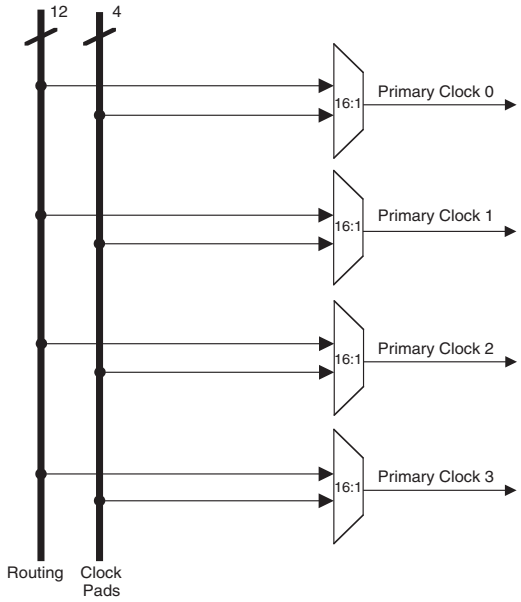

Figure 2-8. Primary Clocks for MachXO1200 and MachXO2280 Devices

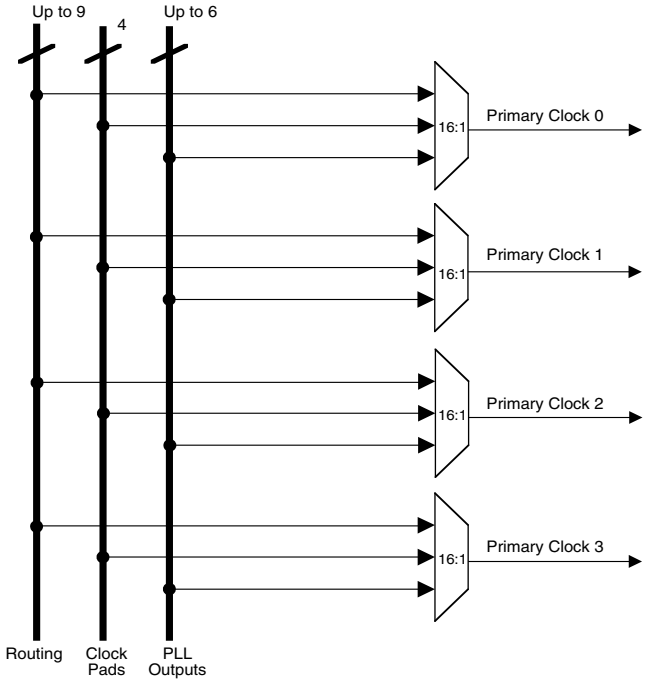
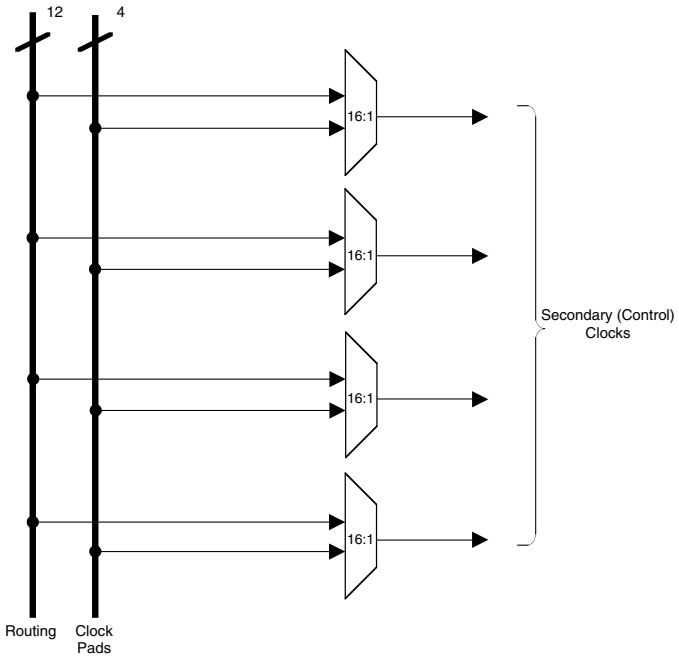


Four secondary clocks are generated from four 16:1 muxes as shown in Figure 2-9. Four of the secondary clock sources come from dual function clock pins and 12 come from internal routing.

Figure 2-9. Secondary Clocks for MachXO Devices



sysCLOCK Phase Locked Loops (PLLs)

The MachXO1200 and MachXO2280 provide PLL support. The source of the PLL input divider can come from an external pin or from internal routing. There are four sources of feedback signals to the feedback divider: from CLKINTFB (internal feedback port), from the global clock nets, from the output of the post scalar divider, and from the routing (or from an external pin). There is a PLL_LOCK signal to indicate that the PLL has locked on to the input clock signal. Figure 2-10 shows the sysCLOCK PLL diagram.

The setup and hold times of the device can be improved by programming a delay in the feedback or input path of the PLL which will advance or delay the output clock with reference to the input clock. This delay can be either programmed during configuration or can be adjusted dynamically. In dynamic mode, the PLL may lose lock after adjustment and not relock until the t_{LOCK} parameter has been satisfied. Additionally, the phase and duty cycle block allows the user to adjust the phase and duty cycle of the CLKOS output.

The sysCLOCK PLLs provide the ability to synthesize clock frequencies. Each PLL has four dividers associated with it: input clock divider, feedback divider, post scalar divider, and secondary clock divider. The input clock divider is used to divide the input clock signal, while the feedback divider is used to multiply the input clock signal. The post scalar divider allows the VCO to operate at higher frequencies than the clock output, thereby increasing the frequency range. The secondary divider is used to derive lower frequency outputs.

Figure 2-10. PLL Diagram

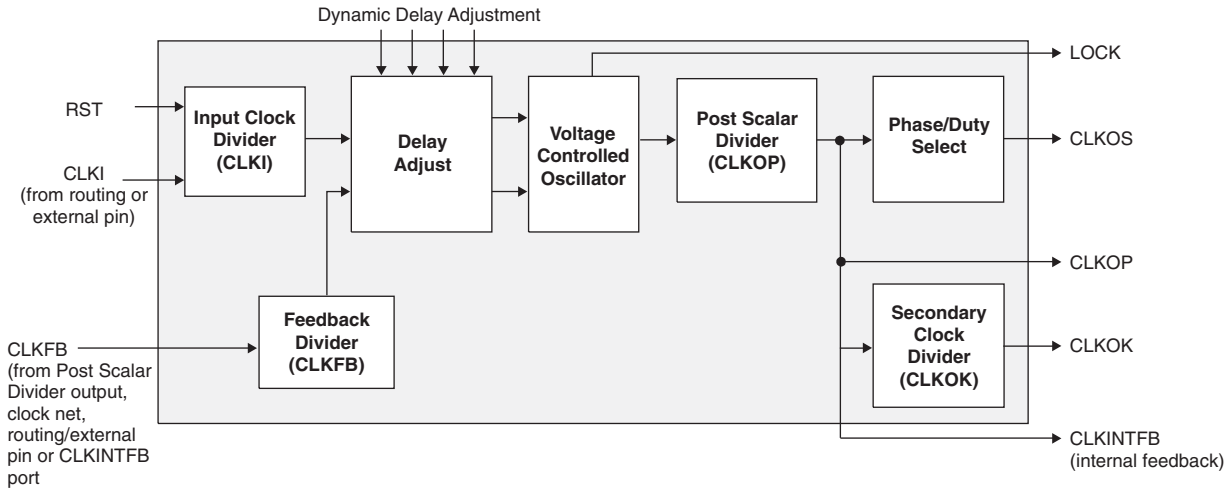


Figure 2-11 shows the available macros for the PLL. Table 2-5 provides signal description of the PLL Block.

Figure 2-11. PLL Primitive

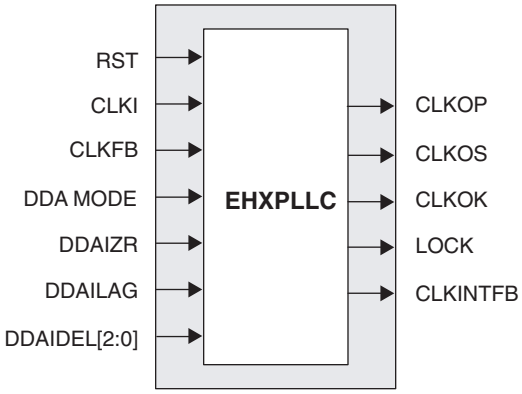

Figure 2-13. Memory Core Reset

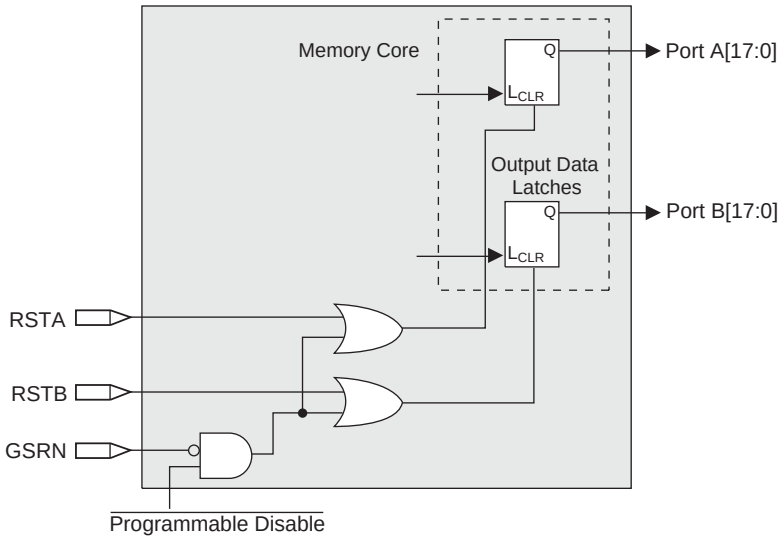
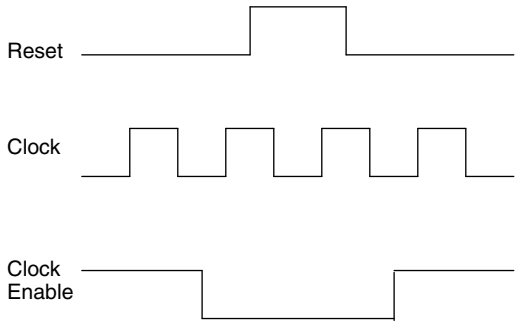


For further information on the sysMEM EBR block, see the details of additional technical documentation at the end of this data sheet.

EBR Asynchronous Reset

EBR asynchronous reset or GSR (if used) can only be applied if all clock enables are low for a clock cycle before the reset is applied and released a clock cycle after the reset is released, as shown in Figure 2-14. The GSR input to the EBR is always asynchronous.

Figure 2-14. EBR Asynchronous Reset (Including GSR) Timing Diagram



If all clock enables remain enabled, the EBR asynchronous reset or GSR may only be applied and released after the EBR read and write clock inputs are in a steady state condition for a minimum of $1/f_{MAX}$ (EBR clock). The reset release must adhere to the EBR synchronous reset setup time before the next active read or write clock edge.

If an EBR is pre-loaded during configuration, the GSR input must be disabled or the release of the GSR during device Wake Up must occur before the release of the device I/Os becoming active.

These instructions apply to all EBR RAM, ROM and FIFO implementations. For the EBR FIFO mode, the GSR signal is always enabled and the WE and RE signals act like the clock enable signals in Figure 2-14. The reset timing rules apply to the RPReset input vs the RE input and the RST input vs. the WE and RE inputs. Both RST and RPReset are always asynchronous EBR inputs.

Note that there are no reset restrictions if the EBR synchronous reset is used and the EBR GSR input is disabled

Table 2-10. Supported Output Standards

Output Standard	Drive	V_{CCIO} (Typ.)
Single-ended Interfaces		
LVTTL	4mA, 8mA, 12mA, 16mA	3.3
LVCMOS33	4mA, 8mA, 12mA, 14mA	3.3
LVCMOS25	4mA, 8mA, 12mA, 14mA	2.5
LVCMOS18	4mA, 8mA, 12mA, 14mA	1.8
LVCMOS15	4mA, 8mA	1.5
LVCMOS12	2mA, 6mA	1.2
LVCMOS33, Open Drain	4mA, 8mA, 12mA, 14mA	—
LVCMOS25, Open Drain	4mA, 8mA, 12mA, 14mA	—
LVCMOS18, Open Drain	4mA, 8mA, 12mA, 14mA	—
LVCMOS15, Open Drain	4mA, 8mA	—
LVCMOS12, Open Drain	2mA, 6mA	—
PCI33[3]	N/A	3.3
Differential Interfaces		
LVDS[1, 2]	N/A	2.5
BLVDS, RSDS[2]	N/A	2.5
LVPECL[2]	N/A	3.3

1. MachXO1200 and MachXO2280 devices have dedicated LVDS buffers.
2. These interfaces can be emulated with external resistors in all devices.
3. Top Banks of MachXO1200 and MachXO2280 devices only.

sysIO Buffer Banks

The number of Banks vary between the devices of this family. Eight Banks surround the two larger devices, the MachXO1200 and MachXO2280 (two Banks per side). The MachXO640 has four Banks (one Bank per side). The smallest member of this family, the MachXO256, has only two Banks.

Each sysIO buffer Bank is capable of supporting multiple I/O standards. Each Bank has its own I/O supply voltage (V_{CCIO}) which allows it to be completely independent from the other Banks. Figure 2-18, Figure 2-18, Figure 2-20 and Figure 2-21 shows the sysIO Banks and their associated supplies for all devices.

Table 3-1. LVDS DC Conditions

Over Recommended Operating Conditions

Parameter	Description	Typical	Units
Z_{OUT}	Output impedance	20	Ω
R_S	Driver series resistor	294	Ω
R_P	Driver parallel resistor	121	Ω
R_T	Receiver termination	100	Ω
V_{OH}	Output high voltage	1.43	V
V_{OL}	Output low voltage	1.07	V
V_{OD}	Output differential voltage	0.35	V
V_{CM}	Output common mode voltage	1.25	V
Z_{BACK}	Back impedance	100	Ω
I_{DC}	DC output current	3.66	mA

BLVDS

The MachXO family supports the BLVDS standard through emulation. The output is emulated using complementary LVCMOS outputs in conjunction with a parallel external resistor across the driver outputs. The input standard is supported by the LVDS differential input buffer on certain devices. BLVDS is intended for use when multi-drop and bi-directional multi-point differential signaling is required. The scheme shown in Figure 3-2 is one possible solution for bi-directional multi-point differential signals.

Figure 3-2. BLVDS Multi-point Output Example

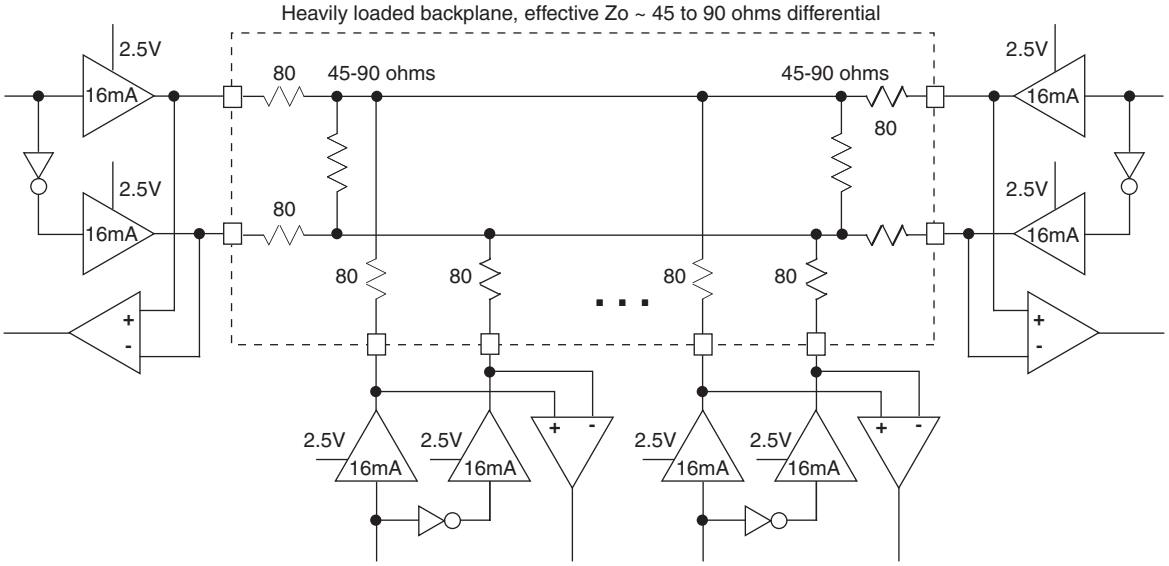


Table 3-2. BLVDS DC Conditions[1]

Over Recommended Operating Conditions

Symbol	Description	Nominal		Units
		Zo = 45	Zo = 90	
Z_{OUT}	Output impedance	100	100	Ohms
R_{TLEFT}	Left end termination	45	90	Ohms
R_{TRIGHT}	Right end termination	45	90	Ohms
V_{OH}	Output high voltage	1.375	1.48	V
V_{OL}	Output low voltage	1.125	1.02	V
V_{OD}	Output differential voltage	0.25	0.46	V
V_{CM}	Output common mode voltage	1.25	1.25	V
I_{DC}	DC output current	11.2	10.2	mA

1. For input buffer, see LVDS table.

LVPECL

The MachXO family supports the differential LVPECL standard through emulation. This output standard is emulated using complementary LVCMOS outputs in conjunction with a parallel resistor across the driver outputs on all the devices. The LVPECL input standard is supported by the LVDS differential input buffer on certain devices. The scheme shown in Figure 3-3 is one possible solution for point-to-point signals.

Figure 3-3. Differential LVPECL

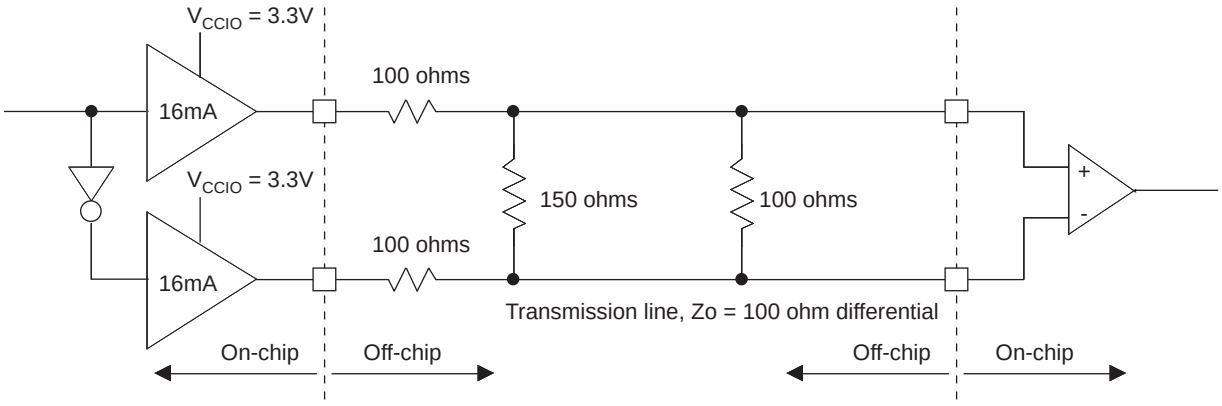

Table 3-3. LVPECL DC Conditions[1]

Over Recommended Operating Conditions

Symbol	Description	Nominal	Units
Z_{OUT}	Output impedance	100	Ohms
R_P	Driver parallel resistor	150	Ohms
R_T	Receiver termination	100	Ohms
V_{OH}	Output high voltage	2.03	V
V_{OL}	Output low voltage	1.27	V
V_{OD}	Output differential voltage	0.76	V
V_{CM}	Output common mode voltage	1.65	V
Z_{BACK}	Back impedance	85.7	Ohms
I_{DC}	DC output current	12.7	mA

1. For input buffer, see LVDS table.

MachXO Family Data Sheet Ordering Information

June 2013 Data Sheet DS1002

Part Number Description

LCMXO XXXX X – X XXXXXX X XX

Device Family
MachXO PLD

Logic Capacity
256 LUTs = 256
640 LUTs = 640
1200 LUTs = 1200
2280 LUTs = 2280

Supply Voltage
C = 1.8V/2.5V/3.3V
E = 1.2V

Note: Parts dual marked as described.

Speed
3 = Slowest
4
5 = Fastest

Package
T100 = 100-pin TQFP
T144 = 144-pin TQFP
M100 = 100-ball csBGA
M132 = 132-ball csBGA
B256 = 256-ball caBGA
FT256 = 256-ball ftBGA
FT324 = 324-ball ftBGA

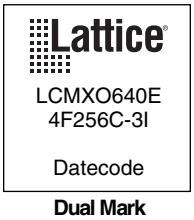
TN100 = 100-pin Lead-Free TQFP
TN144 = 144-pin Lead-Free TQFP
MN100 = 100-ball Lead-Free csBGA
MN132 = 132-ball Lead-Free csBGA
BN256 = 256-ball Lead-Free caBGA
FTN256 = 256-ball Lead-Free ftBGA
FTN324 = 324-ball Lead-Free ftBGA

Grade
C = Commercial
I = Industrial

ES = Engineering Sample
Blank = Production Device

Ordering Information

Note: MachXO devices are dual marked except the slowest commercial speed grade device.þFor example the commercial speed grade LCMXO640E-4F256C is also marked with industrial grade -3I grade.þThe slowest commercial speed grade does not have industrial markings.þ The markings appears as follows:



Dual Mark

LCMXO2280C-4MN132I	2280	1.8V/2.5V/3.3V	101	-4	Lead-Free csBGA	132	IND
LCMXO2280C-3BN256I	2280	1.8V/2.5V/3.3V	211	-3	Lead-Free caBGA	256	IND
LCMXO2280C-4BN256I	2280	1.8V/2.5V/3.3V	211	-4	Lead-Free caBGA	256	IND
LCMXO2280C-3FTN256I	2280	1.8V/2.5V/3.3V	211	-3	Lead-Free ftBGA	256	IND
LCMXO2280C-4FTN256I	2280	1.8V/2.5V/3.3V	211	-4	Lead-Free ftBGA	256	IND
LCMXO2280C-3FTN324I	2280	1.8V/2.5V/3.3V	271	-3	Lead-Free ftBGA	324	IND
LCMXO2280C-4FTN324I	2280	1.8V/2.5V/3.3V	271	-4	Lead-Free ftBGA	324	IND

Date	Version	Section	Change Summary
April 2006 (cont.)	02.0 (cont.)	Architecture (cont.)	"Top View of the MachXO1200 Device" figure updated.
			"Top View of the MachXO640 Device" figure updated.
			"Top View of the MachXO256 Device" figure updated.
			"Slice Diagram" figure updated.
			Slice Signal Descriptions table updated.
			Routing section updated.
			sysCLOCK Phase Lockecd Loops (PLLs) section updated.
			PLL Diagram updated.
			PLL Signal Descriptions table updated.
			sysMEM Memory section has been updated.
			PIO Groups section has been updated.
			PIO section has been updated.
			MachXO PIO Block Diagram updated.
			Supported Input Standards table updated.
			MachXO Configuration and Programming diagram updated.
		DC and Switching Characteristics	Recommended Operating Conditions table - footnotes updated.
			MachXO256 and MachXO640 Hot Socketing Specifications - footnotes updated.
			Added MachXO1200 and MachXO2280 Hot Socketing Specifications table.
			DC Electrical Characteristics, footnotes have been updated.
			Supply Current (Sleep Mode) table has been updated, removed "4W" references. Footnotes have been updated.
			Supply Current (Standby) table and associated footnotes updated.
			Intialization Supply Current table and footnotes updated.
			Programming and Erase Flash Supply Current table and associated footnotes have been updatd.
			Register-to-Register Performance table updated (rev. A 0.19).
			MachXO External Switching Characteristics updated (rev. A 0.19).
			MachXO Internal Timing Parameters updated (rev. A 0.19).
			MachXO Family Timing Adders updated (rev. A 0.19).
			sysCLOCK Timing updated (rev. A 0.19).
			MachXO "C" Sleep Mode Timing updated (A 0.19).
			JTAG Port Timing Specification updated (rev. A 0.19).
			Test Fixture Required Components table updated.
		Pinout Information	Signal Descriptions have been updated.
			Pin Information Summary has been updated. Footnote has been added.
			Power Supply and NC Connection table has been updated.
			Logic Signal Connections have been updated (PCLKTx_x --> PCLKx_x)
		Ordering Information	Removed "4W" references.
			Added 256-ftBGA Ordering Part Numbers for MachXO640.
May 2006	02.1	Pinout Information	Removed [LOC][0]_PLL_RST from Signal Description table.
			PCLK footnote has been added to all appropriate pins.
August 2006	02.2	Multiple	Removed 256 fpBGA information for MachXO640.
