

Welcome to [E-XFL.COM](#)

What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "[Embedded - Microcontrollers](#)"

Details

Product Status	Active
Core Processor	RXv2
Core Size	32-Bit Single-Core
Speed	54MHz
Connectivity	CANbus, EBI/EMI, I ² C, IrDA, SCI, SD/SDIO, SPI, SSI, USB OTG
Peripherals	DMA, LVD, POR, PWM, WDT
Number of I/O	79
Program Memory Size	256KB (256K x 8)
Program Memory Type	FLASH
EEPROM Size	8K x 8
RAM Size	32K x 8
Voltage - Supply (Vcc/Vdd)	1.8V ~ 5.5V
Data Converters	A/D 24x12b; D/A 2x12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	100-TFLGA
Supplier Device Package	100-TFLGA (5.5x5.5)
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/r5f52316adla-20

(9) Floating-point status word (FPSW)

The floating-point status word (FPSW) indicates the results of floating-point operations.

When an exception handling enable bit (Ej) enables the exception handling (Ej = 1), the exception cause can be identified by checking the corresponding Cj flag in the exception handling routine. If the exception handling is masked (Ej = 0), the occurrence of exception can be checked by reading the Fj flag at the end of a series of processing. Once the Fj flag has been set to 1, this value is retained until it is cleared to 0 by software (j = X, U, Z, O, or V).

2.3 Accumulator

The accumulator (ACC0 or ACC1) is a 72-bit register used for DSP instructions. The accumulator is handled as a 96-bit register for reading and writing. At this time, when bits 95 to 72 of the accumulator are read, the value where the value of bit 71 is sign extended is read. Writing to bits 95 to 72 of the accumulator is ignored. ACC0 is also used for the multiply and multiply-and-accumulate instructions; EMUL, EMULU, FMUL, MUL, and RMPA, in which case the prior value in ACC0 is modified by execution of the instruction.

Use the MVTACGU, MVTACHI, and MVTACLO instructions for writing to the accumulator. The MVTACGU, MVTACHI, and MVTACLO instructions write data to bits 95 to 64, the higher-order 32 bits (bits 63 to 32), and the lower-order 32 bits (bits 31 to 0), respectively.

Use the MVFACGU, MVFACHI, MVFACMI, and MVFACLO instructions for reading data from the accumulator. The MVFACGU, MVFACHI, MVFACMI, and MVFACLO instructions read data from the guard bits (bits 95 to 64), higher-order 32 bits (bits 63 to 32), the middle 32 bits (bits 47 to 16), and the lower-order 32 bits (bits 31 to 0), respectively.

- Longword-size I/O registers

```
MOV.L #SFR_ADDR, R1
MOV.L #SFR_DATA, [R1]
CMP [R1].L, R1
;; Next process
```

If multiple registers are written to and a subsequent instruction should be executed after the write operations are entirely completed, only read the I/O register that was last written to and execute the operation using the value; it is not necessary to read or execute operation for all the registers that were written to.

(3) Number of Access Cycles to I/O Registers

For numbers of clock cycles for access to I/O registers, see Table 4.1, List of I/O Registers (Address Order). The number of access cycles to I/O registers is obtained by following equation.*1

$$\begin{aligned} \text{Number of access cycles to I/O registers} = & \text{Number of bus cycles for internal main bus 1} + \\ & \text{Number of divided clock synchronization cycles} + \\ & \text{Number of bus cycles for internal peripheral bus 1 to 6} \end{aligned}$$

The number of bus cycles of internal peripheral bus 1 to 6 differs according to the register to be accessed.

When peripheral functions connected to internal peripheral bus 2 to 6 or registers for the external bus control unit (except for bus error related registers) are accessed, the number of divided clock synchronization cycles is added.

The number of divided clock synchronization cycles differs depending on the frequency ratio between ICLK and PCLK (or FCLK, BCLK) or bus access timing.

In the peripheral function unit, when the frequency ratio of ICLK is equal to or greater than that of PCLK (or FCLK), the sum of the number of bus cycles for internal main bus 1 and the number of the divided clock synchronization cycles will be one cycle of PCLK (or FCLK) at a maximum. Therefore, one PCLK (or FCLK) has been added to the number of access cycles shown in Table 4.1.

When the frequency ratio of ICLK is lower than that of PCLK (or FCLK), the subsequent bus access is started from the ICLK cycle following the completion of the access to the peripheral functions. Therefore, the access cycles are described on an ICLK basis.

In the external bus control unit, the sum of the number of bus cycles for internal main bus 1 and the number of divided clock synchronization cycles will be one cycle of BCLK at a maximum. Therefore, one BCLK is added to the number of access cycles shown in Table 4.1.

Note 1. This applies to the number of cycles when the access from the CPU does not conflict with the instruction fetching to the external memory or bus access from the different bus master (DMAC or DTC).

(4) Restrictions in Relation to RMPA and String-Manipulation Instructions

The allocation of data to be handled by RMPA or string-manipulation instructions to I/O registers is prohibited, and operation is not guaranteed if this restriction is not observed.

(5) Notes on Sleep Mode and Mode Transitions

During sleep mode or mode transitions, do not write to the system control related registers (indicated by 'SYSTEM' in the Module Symbol column in Table 4.1, List of I/O Registers (Address Order)).

Table 4.1 List of I/O Registers (Address Order) (3/33)

Address	Module Symbol	Register Name	Register Symbol	Number of Bits	Access Size	Number of Access Cycles	
						ICLK ≥ PCLK	ICLK < PCLK

Figure 5.6 Temperature Dependency of RTC Operation with VCC Off (Reference Data)

Table 5.10 DC Characteristics (8)

Conditions: $1.8\text{ V} \leq \text{VCC} = \text{VCC_USB} = \text{AVCC0} \leq 5.5\text{ V}$, $\text{VSS} = \text{AVSS0} = \text{VSS_USB} = 0\text{ V}$

Item	Symbol	Min.	Typ.	Max.	Unit	Test Conditions
Permissible total power consumption*1	Pd	—	—	350	mW	D-version product
Permissible total power consumption*1	Pd	—	—	130	mW	G-version product

Note: Please contact a Renesas Electronics sales office for information on the derating of the G-version product. Derating is the systematic reduction of load to improve reliability.

Note 1. Total power dissipated by the entire chip (including output currents)

Table 5.16 Permissible Output Currents (1)Conditions: $1.8\text{ V} \leq VCC = VCC_USB = AVCC0 \leq 5.5\text{ V}$, $VSS = AVSS0 = VSS_USB = 0\text{ V}$, $T_a = -40\text{ to }+85^\circ\text{C}$

Item			Symbol	Max.	Unit
Permissible output low current (average value per pin)	Ports 40 to 47, ports 03, 05, 07, port 36, 37		I _{OL}	4.0	mA
	Ports other than above	Normal output mode		4.0	
		High-drive output mode		8.0	
Permissible output low current (maximum value per pin)	Ports 40 to 47, ports 03, 05, 07, ports 36, 37			4.0	
	Ports other than above	Normal output mode		4.0	
		High-drive output mode		8.0	
Permissible output low current	Total of ports 40 to 47, ports 03, 05, 07		ΣI _{OL}	40	
	Total of ports 12 to 17, ports 20 to 27, ports 30 to 37, port PJ3			40	
	Total of ports 50 to 55, ports C0 to C7, ports B0 to B7			40	
	Total of ports E0 to E7, ports A0 to A7, ports D0 to D4			40	
	Total of all output pins			80	
Permissible output high current (average value per pin)	Ports 40 to 47, ports 03, 05, 07, ports 36, 37		I _{OH}	−4.0	
	Ports other than above	Normal output mode		−4.0	
		High-drive output mode		−8.0	
Permissible output high current (maximum value per pin)	Ports 40 to 47, ports 03, 05, 07, ports 36, 37			−4.0	
	Ports other than above	Normal output mode		−4.0	
		High-drive output mode		−8.0	
Permissible output high current	Total of ports 40 to 47, ports 03, 05, 07		ΣI _{OH}	−40	
	Total of ports 12 to 17, ports 20 to 27, ports 30 to 37, port PJ3			−40	
	Total of ports 50 to 55, ports C0 to C7, ports B0 to B7			−40	
	Total of ports E0 to E7, ports A0 to A7, ports D0 to D4			−40	
	Total of all output pins			−80	

Note: Do not exceed the permissible total supply current.

5.2.1 Normal I/O Pin Output Characteristics (1)

Figure 5.8 to Figure 5.12 show the characteristics when normal output is selected by the drive capacity control register.

Figure 5.8 V_{OH}/V_{OL} and I_{OH}/I_{OL} Voltage Characteristics at $T_a = 25^\circ\text{C}$ When Normal Output is Selected (Reference Data)

Figure 5.9 V_{OH}/V_{OL} and I_{OH}/I_{OL} Temperature Characteristics at $V_{CC} = 1.8\text{ V}$ When Normal Output is Selected (Reference Data)

Figure 5.63 SSIDATA Output Delay After SSIWSn Changing Edge

Figure 5.64 SD Host Interface Input/Output Signal Timing

Table 5.50 A/D Conversion Characteristics (5)

Conditions: $1.8\text{V} \leq V_{CC} = V_{CC_USB} = AVCC0 \leq 5.5\text{V}$, $1.8\text{V} \leq V_{REFH0} \leq AVCC0$, $V_{SS} = AVSS0 = V_{SS_USB} = 0\text{V}$,
reference voltage = V_{REFH0} selected, $T_a = -40$ to $+105^\circ\text{C}$

Item		Min.	Typ.	Max.	Unit	Test Conditions
Frequency		1	—	8	MHz	
Resolution		—	—	12	Bit	
Conversion time*1 (Operation at PCLKD = 8 MHz)	Permissible signal source impedance (Max.) = 5 k Ω	6.75	—	—	μs	High-precision channel The ADCSR.ADHSC bit is 1 The ADSSTRn register is 0Dh
		10.13	—	—		Normal-precision channel The ADCSR.ADHSC bit is 1 The ADSSTRn register is 28h
Analog input capacitance	Cs	—	—	15	pF	Pin capacitance included Figure 5.68
Analog input resistance	Rs	—	—	2.5	k Ω	Figure 5.68
Offset error		—	± 1	± 7.5	LSB	
Full-scale error		—	± 1.5	± 7.5	LSB	
Quantization error		—	± 0.5	—	LSB	
Absolute accuracy		—	± 3.0	± 8.0	LSB	
DNL differential non-linearity error		—	± 1.0	—	LSB	
INL integral non-linearity error		—	± 1.25	± 3.0	LSB	

Note: The characteristics apply when no pin functions other than A/D converter input are used. Absolute accuracy includes quantization errors. Offset error, full-scale error, DNL differential non-linearity error, and INL integral non-linearity error do not include quantization errors.

Note 1. The conversion time is the sum of the sampling time and the comparison time. As the test conditions, the number of sampling states is indicated.

Table 5.51 A/D Converter Channel Classification

Classification	Channel	Conditions	Remarks
High-precision channel	AN000 to AN007	$AVCC0 = 1.8$ to 5.5V	Pins AN000 to AN007 cannot be used as digital outputs when the A/D converter is in use.
Normal-precision channel	AN016 to AN031		
Internal reference voltage input channel	Internal reference voltage	$AVCC0 = 2.0$ to 5.5V	
Temperature sensor input channel	Temperature sensor output	$AVCC0 = 2.0$ to 5.5V

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
