
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	eZ8
Core Size	8-Bit
Speed	20MHz
Connectivity	-
Peripherals	Brown-out Detect/Reset, LED, POR, PWM, WDT
Number of I/O	25
Program Memory Size	4KB (4K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	256 x 8
Voltage - Supply (Vcc/Vdd)	2.7V ~ 3.6V
Data Converters	-
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	28-VQFN
Supplier Device Package	-
Purchase URL	https://www.e-xfl.com/product-detail/zilog/z8f0431qj020eg

Pin Description

The Z8 Encore! F0830 Series products are available in a variety of package styles and pin configurations. This chapter describes the signals and the pin configurations for each of the package styles. For information about the physical package specifications, see the Packaging chapter on page 199.

Available Packages

Table 3 lists the package styles that are available for each device in the Z8 Encore! F0830 Series product line.

Table 3. Z8 Encore! F0830 Series Package Options

Part Number	ADC	20-pin QFN	20-pin SOIC	20-pin SSOP	20-pin PDIP	28-pin QFN	28-pin SOIC	28-pin SSOP	28-pin PDIP
Z8F1232	Yes	X	X	X	X	X	X	X	X
Z8F1233	No	X	X	X	X	X	X	X	X
Z8F0830	Yes	X	X	X	X	X	X	X	X
Z8F0831	No	X	X	X	X	X	X	X	X
Z8F0430	Yes	X	X	X	X	X	X	X	X
Z8F0431	No	X	X	X	X	X	X	X	X
Z8F0230	Yes	X	X	X	X	X	X	X	X
Z8F0231	No	X	X	X	X	X	X	X	X
Z8F0130	Yes	X	X	X	X	X	X	X	X
Z8F0131	No	X	X	X	X	X	X	X	X

Pin Configurations

Figures 2 and 3 display the pin configurations of all of the packages available in the Z8 Encore! F0830 Series. See Table 4 on page 11 for a description of the signals. Analog input alternate functions (ANAx) are not available on the following devices:

- Z8F0831
- Z8F0431
- Z8F0131
- Z8F0231
- Z8F1233

Table 8. Register File Address Map (Continued)

Address (Hex)	Register Description	Mnemonic	Reset (Hex)	Page No.
Interrupt Controller (cont'd)				
FCE	Shared interrupt select	IRQSS	00	66
FCF	Interrupt control	IRQCTL	00	67
GPIO Port A				
FD0	Port A address	PAADDR	00	39
FD1	Port A control	PACTL	00	41
FD2	Port A input data	PAIN	XX	41
FD3	Port A output data	PAOUT	00	41
GPIO Port B				
FD4	Port B address	PBADDR	00	39
FD5	Port B control	PBCTL	00	41
FD6	Port B input data	PBIN	XX	41
FD7	Port B output data	PBOUT	00	41
GPIO Port C				
FD8	Port C address	PCADDR	00	39
FD9	Port C control	PCCTL	00	41
FDA	Port C input data	PCIN	XX	41
FDB	Port C output data	PCOUT	00	41
GPIO Port D				
FDC	Port D address	PDADDR	00	39
FDD	Port D control	PDCTL	00	41
FDE	Reserved	—	XX	
FDF	Port D output data	PDOUT	00	41
FE0–FEF	Reserved	—	XX	
Watchdog Timer (WDT)				
FF0	Reset status	RSTSTAT	XX	95
	Watchdog Timer control	WDTCTL	XX	95
FF1	Watchdog Timer reload upper byte	WDTU	FF	96
FF2	Watchdog Timer reload high byte	WDTH	FF	96
FF3	Watchdog Timer reload low byte	WDTL	FF	97
FF4–FF5	Reserved	—	XX	

Note: XX = Undefined.

Table 16. Port Alternate Function Mapping (Continued)

Port	Pin	Mnemonic	Alternate Function Description	Alternate Function Set Register AFS1
Port B[2]	PB0	Reserved		AFS1[0]: 0
		ANA0	ADC analog input	AFS1[0]: 1
	PB1	Reserved		AFS1[1]: 0
		ANA1	ADC analog input	AFS1[1]: 1
	PB2	Reserved		AFS1[2]: 0
		ANA2	ADC analog input	AFS1[2]: 1
	PB3	CLKIN	External input clock	AFS1[3]: 0
		ANA3	ADC analog input	AFS1[3]: 1
	PB4	Reserved		AFS1[4]: 0
		ANA7	ADC analog input	AFS1[4]: 1
	PB5	Reserved		AFS1[5]: 0
		V_{REF}	ADC reference voltage	AFS1[5]: 1
	PB6	Reserved		AFS1[6]: 0
		Reserved		AFS1[6]: 1
	PB7	Reserved		AFS1[7]: 0
		Reserved		AFS1[7]: 1

Notes:
1. Because there is only a single alternate function for each Port A and Port D (PD0) pin, the Alternate Function Set registers are not implemented for Port A and Port D (PD0). Enabling alternate function selections (as described in the Port A–D Alternate Function Subregisters section on page 42) automatically enables the associated alternate function.
2. Because there are at most two choices of alternate functions for any Port B pin, the AFS2 Alternate Function Set Register is implemented but is not used to select the function. Additionally, alternate function selection (as described in the Port A–D Alternate Function Subregisters section on page 42) must also be enabled.
3. Because there are at most two choices of alternate functions for any Port C pin, the AFS2 Alternate Function Set Register is implemented but is not used to select the function. Additionally, alternate function selection (as described in the Port A–D Alternate Function Subregisters section on page 42) must also be enabled.

Interrupt Controller

The Interrupt Controller on the Z8 Encore!® F0830 Series products prioritize the interrupt requests from the on-chip peripherals and the GPIO port pins. The features of the Interrupt Controller include:

- Seventeen interrupt sources using sixteen unique interrupt vectors:
  - Twelve GPIO port pin interrupt sources
  - Five on-chip peripheral interrupt sources (Comparator Output interrupt shares one interrupt vector with PA6)
- Flexible GPIO interrupts
  - Eight selectable rising and falling edge GPIO interrupts
  - Four dual-edge interrupts
- Three levels of individually programmable interrupt priority
- Watchdog Timer can be configured to generate an interrupt
  m

Interrupt requests (IRQs) allow peripheral devices to suspend CPU operation in an orderly manner and force the CPU to start an interrupt service routine (ISR). Usually this interrupt service routine is involved with the exchange of data, status information or control information between the CPU and the interrupting peripheral. When the service routine is completed, the CPU returns to the operation from which it was interrupted.

The eZ8 CPU supports both vectored and polled interrupt handling. For polled interrupts, the Interrupt Controller has no effect on operation. For more information about interrupt servicing by the eZ8 CPU, refer to the eZ8 CPU User Manual (UM0128), which is available for download at www.zilog.com.

Interrupt Vector Listing

Table 34 lists the interrupts available in order of priority. The interrupt vector is stored with the most significant byte (MSB) at the even program memory address and the least significant byte (LSB) at the odd program memory address.

Note: Some port interrupts are not available on the 20-pin and 28-pin packages. The ADC interrupt is unavailable on devices not containing an ADC.

Table 43. IRQ1 Enable Low Bit Register (IRQ1ENL)

Bit	7	6	5	4	3	2	1	0
Field	PA7ENL	PA6CENL	PA5ENL	PA4ENL	PA3ENL	PA2ENL	PA1ENL	PA0ENL
RESET	0	0	0	0	0	0	0	0
R/W	R/W	R/W	R/W	R/W	R/W	R/W	R/W	R/W
Address	FC5H							

Bit	Description
[7] PA7ENL	**Port A Bit[7] Interrupt Request Enable Low Bit**
[6] PA6CENL	**Port A Bit[7] or Comparator Interrupt Request Enable Low Bit**
[5:0] PA*x*ENL	**Port A Bit[*x*] Interrupt Request Enable Low Bit** See the interrupt port select register for selection of either Port A or Port D as the interrupt source.

Note: *x* indicates register bits in the address range 5–0.

IRQ2 Enable High and Low Bit Registers

Table 44 describes the priority control for IRQ2. The IRQ2 Enable High and Low Bit registers, shown in Tables 45 and 46, form a priority-encoded enabling service for interrupts in the Interrupt Request 2 Register. Priority is generated by setting the bits in each register.

Table 44. IRQ2 Enable and Priority Encoding

IRQ2ENH[*x*]	IRQ2ENL[*x*]	Priority	Description
0	0	Disabled	Disabled
0	1	Level 1	Low
1	0	Level 2	Nominal
1	1	Level 3	High

Note: *x* indicates register bits in the address range 7–0.

Bit	Description (Continued)
[2:0] TMODE	**Timer Mode** This field along with the TMODEHI bit in TxCTL0 register determines the operating mode of the timer. TMODEHI is the most significant bit of the timer mode selection value. 0000 = ONE-SHOT Mode. 0001 = CONTINUOUS Mode. 0010 = COUNTER Mode. 0011 = PWM SINGLE OUTPUT Mode. 0100 = CAPTURE Mode. 0101 = COMPARE Mode. 0110 = GATED Mode. 0111 = CAPTURE/COMPARE Mode. 1000 = PWM DUAL OUTPUT Mode. 1001 = CAPTURE RESTART Mode. 1010 = COMPARATOR COUNTER Mode.

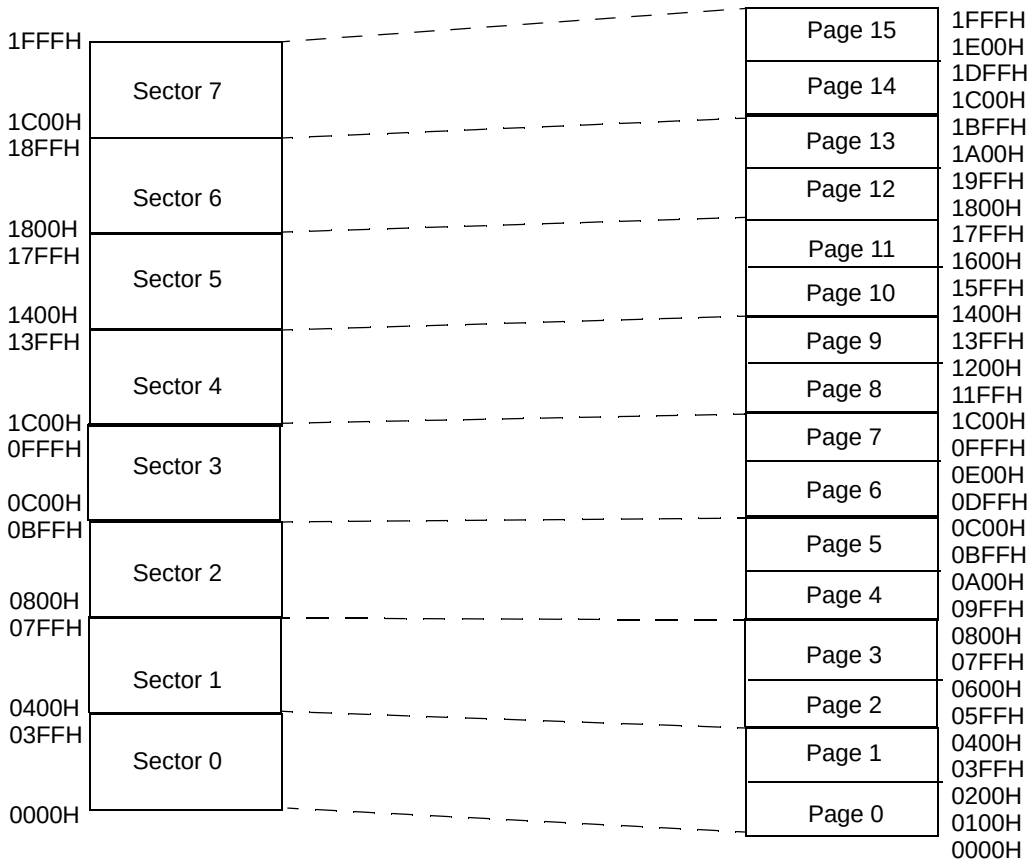

Figure 17. 8K Flash with NVDS

Oscillator Control

The Z8 Encore! F0830 Series device uses five possible clocking schemes. Each one of these is user-selectable.

- On-chip precision trimmed RC oscillator
- On-chip oscillator using off-chip crystal or resonator
- On-chip oscillator using external RC network
- External clock drive
- On-chip low precision Watchdog Timer Oscillator

In addition, Z8 Encore! F0830 Series devices contain clock failure detection and recovery circuitry, allowing continued operation despite a failure of the primary oscillator.

Operation

This chapter discusses the logic used to select the system clock and handle primary oscillator failures. A description of the specific operation of each oscillator is outlined further in this document.

System Clock Selection

The oscillator control block selects from the available clocks. *Table 98* describes each clock source and its usage.

Bit	Description (Continued)
[4] POFEN	**Primary Oscillator Failure Detection Enable** 1 = Failure detection and recovery of primary oscillator is enabled. 0 = Failure detection and recovery of primary oscillator is disabled.
[3] WDFEN	**Watchdog Timer Oscillator Failure Detection Enable** 1 = Failure detection of Watchdog Timer Oscillator is enabled. 0 = Failure detection of Watchdog Timer Oscillator is disabled.
[2:0] SCKSEL	**System Clock Oscillator Select** 000 = Internal Precision Oscillator functions as system clock at 5.53 MHz. 001 = Internal Precision Oscillator functions as system clock at 32 kHz. 010 = Crystal oscillator or external RC oscillator functions as system clock. 011 = Watchdog Timer Oscillator functions as system clock. 100 = External clock signal on PB3 functions as system clock. 101 = Reserved. 110 = Reserved. 111 = Reserved.

ister, the user code must wait at least 5000 IPO cycles for the crystal to stabilize. After this period, the crystal oscillator may be selected as the system clock.

Figure 25 displays a recommended configuration for connection with an external fundamental-mode, parallel-resonant crystal operating at 20 MHz. Recommended 20 MHz crystal specifications are provided in Table 100. Resistor R_1 is optional and limits total power dissipation by the crystal. Printed circuit board layout must add no more than 4 pF of stray capacitance to either the X_{IN} or X_{OUT} pins. If oscillation does not occur, reduce the values of capacitors C_1 and C_2 to decrease loading.

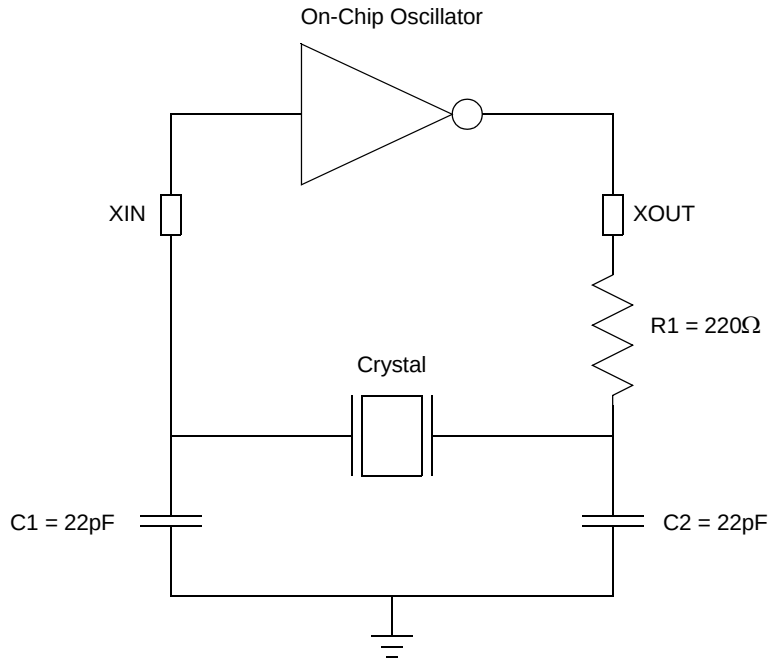

Figure 25. Recommended 20 MHz Crystal Oscillator Configuration

Table 100. Recommended Crystal Oscillator Specifications

Parameter	Value	Units	Comments
Frequency	20	MHz	
Resonance	Parallel		
Mode	Fundamental		
Series Resistance (R_S)	60	Ω	Maximum
Load Capacitance (C_L)	30	pF	Maximum
Shunt Capacitance (C_0)	7	pF	Maximum
Drive Level	1	mW	Maximum

Table 103. Notational Shorthand (Continued)

Notation	Description	Operand	Range
R	Register	Reg	Reg. represents a number in the range of 00H to FFH
RA	Relative Address	X	X represents an index in the range of +127 to –128 which is an offset relative to the address of the next instruction
rr	Working Register Pair	RRp	p = 0, 2, 4, 6, 8, 10, 12 or 14
RR	Register Pair	Reg	Reg. represents an even number in the range of 00H to FEH
Vector	Vector Address	Vector	Vector represents a number in the range of 00H to FFH
X	Indexed	#Index	The register or register pair to be indexed is offset by the signed Index value (#Index) in a +127 to –128 range.

Table 104 contains additional symbols that are used throughout the instruction summary and instruction set description sections.

Table 104. Additional Symbols

Symbol	Definition
dst	Destination Operand
src	Source Operand
@	Indirect Address Prefix
SP	Stack Pointer
PC	Program Counter
FLAGS	Flags Register
RP	Register Pointer
#	Immediate Operand Prefix
B	Binary Number Suffix
%	Hexadecimal Number Prefix
H	Hexadecimal Number Suffix

Assignment of a value is indicated by an arrow, as shown in the following example.

dst ← dst + src

Table 112. Rotate and Shift Instructions (Continued)

Mnemonic	Operands	Instruction
RR	dst	Rotate Right
RRC	dst	Rotate Right through Carry
SRA	dst	Shift Right Arithmetic
SRL	dst	Shift Right Logical
SWAP	dst	Swap Nibbles
