### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

Product Status	Active
Number of LABs/CLBs	9434
Number of Logic Elements/Cells	25000
Total RAM Bits	2002944
Number of I/O	128
Number of Gates	-
Voltage - Supply	1.07V ~ 1.13V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 125°C (TJ)
Package / Case	256-LBGA
Supplier Device Package	256-FBGA (17x17)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/intel/5ceba2f17a7n">https://www.e-xfl.com/product-detail/intel/5ceba2f17a7n</a>

## Cyclone V Device Overview

The Cyclone® V devices are designed to simultaneously accommodate the shrinking power consumption, cost, and time-to-market requirements; and the increasing bandwidth requirements for high-volume and cost-sensitive applications.

Enhanced with integrated transceivers and hard memory controllers, the Cyclone V devices are suitable for applications in the industrial, wireless and wireline, military, and automotive markets.

## Key Advantages of Cyclone V Devices

**Table 1. Key Advantages of the Cyclone V Device Family**

Advantage	Supporting Feature
Lower power consumption	<ul style="list-style-type: none"> <li>Built on TSMC's 28 nm low-power (28LP) process technology and includes an abundance of hard intellectual property (IP) blocks</li> <li>Up to 40% lower power consumption than the previous generation device</li> </ul>
Improved logic integration and differentiation capabilities	<ul style="list-style-type: none"> <li>8-input adaptive logic module (ALM)</li> <li>Up to 13.59 megabits (Mb) of embedded memory</li> <li>Variable-precision digital signal processing (DSP) blocks</li> </ul>
Increased bandwidth capacity	<ul style="list-style-type: none"> <li>3.125 gigabits per second (Gbps) and 6.144 Gbps transceivers</li> <li>Hard memory controllers</li> </ul>
Hard processor system (HPS) with integrated Arm* Cortex*-A9 MPCore* processor	<ul style="list-style-type: none"> <li>Tight integration of a dual-core Arm Cortex-A9 MPCore processor, hard IP, and an FPGA in a single Cyclone V system-on-a-chip (SoC)</li> <li>Supports over 128 Gbps peak bandwidth with integrated data coherency between the processor and the FPGA fabric</li> </ul>
Lowest system cost	<ul style="list-style-type: none"> <li>Requires only two core voltages to operate</li> <li>Available in low-cost wirebond packaging</li> <li>Includes innovative features such as Configuration via Protocol (CvP) and partial reconfiguration</li> </ul>

## Summary of Cyclone V Features

**Table 2. Summary of Features for Cyclone V Devices**

Feature	Description	
Technology	<ul style="list-style-type: none"> <li>TSMC's 28-nm low-power (28LP) process technology</li> <li>1.1 V core voltage</li> </ul>	
Packaging	<ul style="list-style-type: none"> <li>Wirebond low-halogen packages</li> <li>Multiple device densities with compatible package footprints for seamless migration between different device densities</li> <li>RoHS-compliant and leaded<sup>(1)</sup> options</li> </ul>	
High-performance FPGA fabric	Enhanced 8-input ALM with four registers	
Internal memory blocks	<ul style="list-style-type: none"> <li>M10K—10-kilobits (Kb) memory blocks with soft error correction code (ECC)</li> <li>Memory logic array block (MLAB)—640-bit distributed LUTRAM where you can use up to 25% of the ALMs as MLAB memory</li> </ul>	
Embedded Hard IP blocks	Variable-precision DSP	<ul style="list-style-type: none"> <li>Native support for up to three signal processing precision levels (three 9 x 9, two 18 x 18, or one 27 x 27 multiplier) in the same variable-precision DSP block</li> <li>64-bit accumulator and cascade</li> <li>Embedded internal coefficient memory</li> <li>Padder/subtractor for improved efficiency</li> </ul>
	Memory controller	DDR3, DDR2, and LPDDR2 with 16 and 32 bit ECC support
	Embedded transceiver I/O	PCI Express* (PCIe*) Gen2 and Gen1 (x1, x2, or x4) hard IP with multifunction support, endpoint, and root port
Clock networks	<ul style="list-style-type: none"> <li>Up to 550 MHz global clock network</li> <li>Global, quadrant, and peripheral clock networks</li> <li>Clock networks that are not used can be powered down to reduce dynamic power</li> </ul>	
Phase-locked loops (PLLs)	<ul style="list-style-type: none"> <li>Precision clock synthesis, clock delay compensation, and zero delay buffering (ZDB)</li> <li>Integer mode and fractional mode</li> </ul>	
FPGA General-purpose I/Os (GPIOs)	<ul style="list-style-type: none"> <li>875 megabits per second (Mbps) LVDS receiver and 840 Mbps LVDS transmitter</li> <li>400 MHz/800 Mbps external memory interface</li> <li>On-chip termination (OCT)</li> <li>3.3 V support with up to 16 mA drive strength</li> </ul>	
Low-power high-speed serial interface	<ul style="list-style-type: none"> <li>614 Mbps to 6.144 Gbps integrated transceiver speed</li> <li>Transmit pre-emphasis and receiver equalization</li> <li>Dynamic partial reconfiguration of individual channels</li> </ul>	
HPS (Cyclone V SE, SX, and ST devices only)	<ul style="list-style-type: none"> <li>Single or dual-core Arm Cortex-A9 MPCore processor-up to 925 MHz maximum frequency with support for symmetric and asymmetric multiprocessing</li> <li>Interface peripherals—10/100/1000 Ethernet media access control (EMAC), USB 2.0 On-The-Go (OTG) controller, quad serial peripheral interface (QSPI) flash controller, NAND flash controller, Secure Digital/MultiMediaCard (SD/MMC) controller, UART, controller area network (CAN), serial peripheral interface (SPI), I<sup>2</sup>C interface, and up to 85 HPS GPIO interfaces</li> <li>System peripherals—general-purpose timers, watchdog timers, direct memory access (DMA) controller, FPGA configuration manager, and clock and reset managers</li> <li>On-chip RAM and boot ROM</li> </ul>

## Available Options

**Figure 6. Sample Ordering Code and Available Options for Cyclone V ST Devices**

## Maximum Resources

**Table 14. Maximum Resource Counts for Cyclone V ST Devices**

Resource		Member Code	
		D5	D6
Logic Elements (LE) (K)		85	110
ALM		32,070	41,910
Register		128,300	166,036
Memory (Kb)	M10K	3,970	5,570
	MLAB	480	621
Variable-precision DSP Block		87	112
18 x 18 Multiplier		174	224
FPGA PLL		6	6
HPS PLL		3	3
6.144 Gbps Transceiver		9	9
FPGA GPIO <sup>(10)</sup>		288	288
HPS I/O		181	181
LVDS	Transmitter	72	72
continued...			

<sup>(10)</sup> The number of GPIOs does not include transceiver I/Os. In the Intel Quartus Prime software, the number of user I/Os includes transceiver I/Os.

**Table 16. Variable-Precision DSP Block Configurations for Cyclone V Devices**

Usage Example	Multiplier Size (Bit)	DSP Block Resource
Low precision fixed point for video applications	Three 9 x 9	1
Medium precision fixed point in FIR filters	Two 18 x 18	1
FIR filters and general DSP usage	Two 18 x 18 with accumulate	1
High precision fixed- or floating-point implementations	One 27 x 27 with accumulate	1

You can configure each DSP block during compilation as independent three 9 x 9, two 18 x 18, or one 27 x 27 multipliers. With a dedicated 64 bit cascade bus, you can cascade multiple variable-precision DSP blocks to implement even higher precision DSP functions efficiently.

**Table 17. Number of Multipliers in Cyclone V Devices**

The table lists the variable-precision DSP resources by bit precision for each Cyclone V device.

Variant	Member Code	Variable-precision DSP Block	Independent Input and Output Multiplications Operator			18 x 18 Multiplier Adder Mode	18 x 18 Multiplier Adder Summed with 36 bit Input
			9 x 9 Multiplier	18 x 18 Multiplier	27 x 27 Multiplier		
Cyclone V E	A2	25	75	50	25	25	25
	A4	66	198	132	66	66	66
	A5	150	450	300	150	150	150
	A7	156	468	312	156	156	156
	A9	342	1,026	684	342	342	342

## Embedded Memory Configurations

**Table 19. Supported Embedded Memory Block Configurations for Cyclone V Devices**

This table lists the maximum configurations supported for the embedded memory blocks. The information is applicable only to the single-port RAM and ROM modes.

Memory Block	Depth (bits)	Programmable Width
MLAB	32	x16, x18, or x20
M10K	256	x40 or x32
	512	x20 or x16
	1K	x10 or x8
	2K	x5 or x4
	4K	x2
	8K	x1

## Clock Networks and PLL Clock Sources

550 MHz Cyclone V devices have 16 global clock networks capable of up to operation. The clock network architecture is based on Intel's global, quadrant, and peripheral clock structure. This clock structure is supported by dedicated clock input pins and fractional PLLs.

**Note:** To reduce power consumption, the Intel Quartus Prime software identifies all unused sections of the clock network and powers them down.

## PLL Features

The PLLs in the Cyclone V devices support the following features:

- Frequency synthesis
- On-chip clock deskew
- Jitter attenuation
- Programmable output clock duty cycles
- PLL cascading
- Reference clock switchover
- Programmable bandwidth
- User-mode reconfiguration of PLLs
- Low power mode for each fractional PLL
- Dynamic phase shift
- Direct, source synchronous, zero delay buffer, external feedback, and LVDS compensation modes

## Fractional PLL

In addition to integer PLLs, the Cyclone V devices use a fractional PLL architecture. The devices have up to eight PLLs, each with nine output counters. You can use the output counters to reduce PLL usage in two ways:

- Reduce the number of oscillators that are required on your board by using fractional PLLs
- Reduce the number of clock pins that are used in the device by synthesizing multiple clock frequencies from a single reference clock source

If you use the fractional PLL mode, you can use the PLLs for precision fractional-N frequency synthesis—removing the need for off-chip reference clock sources in your design.

The transceiver fractional PLLs that are not used by the transceiver I/Os can be used as general purpose fractional PLLs by the FPGA fabric.

## FPGA General Purpose I/O

Cyclone V devices offer highly configurable GPIOs. The following list describes the features of the GPIOs:

- Programmable bus hold and weak pull-up
- LVDS output buffer with programmable differential output voltage ( $V_{OD}$ ) and programmable pre-emphasis
- On-chip parallel termination ( $R_T$  OCT) for all I/O banks with OCT calibration to limit the termination impedance variation
- On-chip dynamic termination that has the ability to swap between series and parallel termination, depending on whether there is read or write on a common bus for signal integrity
- Easy timing closure support using the hard read FIFO in the input register path, and delay-locked loop (DLL) delay chain with fine and coarse architecture

## PCIe Gen1 and Gen2 Hard IP

Cyclone V GX, GT, SX, and ST devices contain PCIe hard IP that is designed for performance and ease-of-use. The PCIe hard IP consists of the MAC, data link, and transaction layers.

The PCIe hard IP supports PCIe Gen2 and Gen1 end point and root port for up to x4 lane configuration. The PCIe Gen2 x4 support is PCIe-compatible.

The PCIe endpoint support includes multifunction support for up to eight functions, as shown in the following figure. The integrated multifunction support reduces the FPGA logic requirements by up to 20,000 LEs for PCIe designs that require multiple peripherals.

**Figure 9. PCIe Multifunction for Cyclone V Devices**

The Cyclone V PCIe hard IP operates independently from the core logic. This independent operation allows the PCIe link to wake up and complete link training in less than 100 ms while the Cyclone V device completes loading the programming file for the rest of the device.

In addition, the PCIe hard IP in the Cyclone V device provides improved end-to-end datapath protection using ECC.

## External Memory Interface

This section provides an overview of the external memory interface in Cyclone V devices.

### Hard and Soft Memory Controllers

Cyclone V devices support up to two hard memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices. Each controller supports 8 to 32 bit components of up to 4 gigabits (Gb) in density with two chip selects and optional ECC. For the Cyclone V SoC devices, an additional hard memory controller in the HPS supports DDR3, DDR2, and LPDDR2 SDRAM devices.

All Cyclone V devices support soft memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices for maximum flexibility.

**Figure 10. Device Chip Overview for Cyclone V GX and GT Devices**

The figure shows a Cyclone V FPGA with transceivers. Different Cyclone V devices may have a different floorplans than the one shown here.

## PMA Features

To prevent core and I/O noise from coupling into the transceivers, the PMA block is isolated from the rest of the chip—ensuring optimal signal integrity. For the transceivers, you can use the channel PLL of an unused receiver PMA as an additional transmit PLL.

**Table 22. PMA Features of the Transceivers in Cyclone V Devices**

Features	Capability
Backplane support	Driving capability up to 6.144 Gbps
PLL-based clock recovery	Superior jitter tolerance
Programmable deserialization and word alignment	Flexible deserialization width and configurable word alignment pattern
Equalization and pre-emphasis	<ul style="list-style-type: none"> <li>Up to 14.37 dB of pre-emphasis and up to 4.7 dB of equalization</li> <li>No decision feedback equalizer (DFE)</li> </ul>
Ring oscillator transmit PLLs	614 Mbps to 6.144 Gbps
Input reference clock range	20 MHz to 400 MHz
Transceiver dynamic reconfiguration	Allows the reconfiguration of a single channel without affecting the operation of other channels

PCS Support	Data Rates (Gbps)	Transmitter Data Path Feature	Receiver Data Path Feature
Serial ATA Gen1 and Gen2	1.5 and 3.0	<ul style="list-style-type: none"><li>Custom PHY IP core with preset feature</li><li>Electrical idle</li></ul>	<ul style="list-style-type: none"><li>Custom PHY IP core with preset feature</li><li>Signal detect</li><li>Wider spread of asynchronous SSC</li></ul>
CPRI 4.1 <sup>(16)</sup>	0.6144 to 6.144	<ul style="list-style-type: none"><li>Dedicated deterministic latency PHY IP core</li><li>Transmitter (TX) manual bit-slip mode</li></ul>	<ul style="list-style-type: none"><li>Dedicated deterministic latency PHY IP core</li><li>Receiver (RX) deterministic latency state machine</li></ul>
OBSAI RP3	0.768 to 3.072		
V-by-One HS	Up to 3.75	Custom PHY IP core	<ul style="list-style-type: none"><li>Custom PHY IP core</li><li>Wider spread of asynchronous SSC</li></ul>
DisplayPort 1.2 <sup>(17)</sup>	1.62 and 2.7		

## SoC with HPS

Each SoC combines an FPGA fabric and an HPS in a single device. This combination delivers the flexibility of programmable logic with the power and cost savings of hard IP in these ways:

- Reduces board space, system power, and bill of materials cost by eliminating a discrete embedded processor
- Allows you to differentiate the end product in both hardware and software, and to support virtually any interface standard
- Extends the product life and revenue through in-field hardware and software updates

## HPS Features

The HPS consists of a dual-core Arm Cortex-A9 MPCore processor, a rich set of peripherals, and a shared multiport SDRAM memory controller, as shown in the following figure.

---

<sup>(16)</sup> High-voltage output mode (1000-BASE-CX) is not supported.

<sup>(17)</sup> Pending characterization.

**Figure 11. HPS with Dual-Core Arm Cortex-A9 MPCore Processor**

## System Peripherals and Debug Access Port

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals to interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports Arm CoreSight debug and core traces to facilitate software development.

**Note:** Although the FPGA fabric and HPS are on separate power domains, the HPS must remain powered up during operation while the FPGA fabric can be powered up or down as required.

#### **Related Information**

##### [Cyclone V Device Family Pin Connection Guidelines](#)

Provides detailed information about power supply pin connection guidelines and power regulator sharing.

## **Hardware and Software Development**

For hardware development, you can configure the HPS and connect your soft logic in the FPGA fabric to the HPS interfaces using the Platform Designer (Standard) system integration tool in the Intel Quartus Prime software.

For software development, the Arm-based SoC devices inherit the rich software development ecosystem available for the Arm Cortex-A9 MPCore processor. The software development process for Intel SoCs follows the same steps as those for other SoC devices from other manufacturers. Support for Linux, VxWorks®, and other operating systems is available for the SoCs. For more information on the operating systems support availability, contact the Intel sales team.

You can begin device-specific firmware and software development on the Intel SoC Virtual Target. The Virtual Target is a fast PC-based functional simulation of a target development system—a model of a complete development board that runs on a PC. The Virtual Target enables the development of device-specific production software that can run unmodified on actual hardware.

## **Dynamic and Partial Reconfiguration**

The Cyclone V devices support dynamic reconfiguration and partial reconfiguration.

### **Dynamic Reconfiguration**

The dynamic reconfiguration feature allows you to dynamically change the transceiver data rates, PMA settings, or protocols of a channel, without affecting data transfer on adjacent channels. This feature is ideal for applications that require on-the-fly multiprotocol or multirate support. You can reconfigure the PMA and PCS blocks with dynamic reconfiguration.

### **Partial Reconfiguration**

**Note:** The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

Partial reconfiguration allows you to reconfigure part of the device while other sections of the device remain operational. This capability is important in systems with critical uptime requirements because it allows you to make updates or adjust functionality without disrupting services.
