Intel - 5CEBA2U15C7N Datasheet

Welcome to <u>E-XFL.COM</u>

Understanding <u>Embedded - FPGAs (Field</u> <u>Programmable Gate Array)</u>

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details

Details	
Product Status	Active
Number of LABs/CLBs	9434
Number of Logic Elements/Cells	25000
Total RAM Bits	2002944
Number of I/O	176
Number of Gates	-
Voltage - Supply	1.07V ~ 1.13V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	324-LFBGA
Supplier Device Package	324-UBGA (15x15)
Purchase URL	https://www.e-xfl.com/product-detail/intel/5ceba2u15c7n

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

Summary of Cyclone V Features

Table 2. Summary of Features for Cyclone V Devices

Feature		Description						
Technology	TSMC's 28-nm low-p1.1 V core voltage	ower (28LP) process technology						
Packaging	 Wirebond low-haloge Multiple device densi different device dens RoHS-compliant and 	ties with compatible package footprints for seamless migration between ities						
High-performance FPGA fabric	Enhanced 8-input ALM w	vith four registers						
Internal memory blocks	 Memory logic array b 	M10K—10-kilobits (Kb) memory blocks with soft error correction code (ECC) Memory logic array block (MLAB)—640-bit distributed LUTRAM where you can use up to 25% of the ALMs as MLAB memory						
Embedded Hard IP blocks	Variable-precision DSP	 Native support for up to three signal processing precision levels (three 9 x 9, two 18 x 18, or one 27 x 27 multiplier) in the same variable-precision DSP block 64-bit accumulator and cascade Embedded internal coefficient memory Preadder/subtractor for improved efficiency 						
	Memory controller	DDR3, DDR2, and LPDDR2 with 16 and 32 bit ECC support						
	Embedded transceiver I/O	PCI Express* (PCIe*) Gen2 and Gen1 (x1, x2, or x4) hard IP with multifunction support, endpoint, and root port						
Clock networks	, , , ,	l clock network d peripheral clock networks are not used can be powered down to reduce dynamic power						
Phase-locked loops (PLLs)	 Precision clock synth Integer mode and fra	esis, clock delay compensation, and zero delay buffering (ZDB) actional mode						
FPGA General-purpose I/Os (GPIOs)	400 MHz/800 Mbps eOn-chip termination	cond (Mbps) LVDS receiver and 840 Mbps LVDS transmitter external memory interface (OCT) p to 16 mA drive strength						
Low-power high-speed serial interface	Transmit pre-emphase	ibps integrated transceiver speed sis and receiver equalization nfiguration of individual channels						
HPS (Cyclone V SE, SX, and ST devices only)	rm Cortex-A9 MPCore processor-up to 925 MHz maximum frequency with ic and asymmetric multiprocessing —10/100/1000 Ethernet media access control (EMAC), USB 2.0 introller, quad serial peripheral interface (QSPI) flash controller, NAND re Digital/MultiMediaCard (SD/MMC) controller, UART, controller area il peripheral interface (SPI), I ² C interface, and up to 85 HPS GPIO							
		-general-purpose timers, watchdog timers, direct memory access (DMA) iguration manager, and clock and reset managers						
		continued

Figure 8. ALM for Cyclone V Devices

You can configure up to 25% of the ALMs in the Cyclone V devices as distributed memory using MLABs.

Related Information

Embedded Memory Capacity in Cyclone V Devices on page 21 Lists the embedded memory capacity for each device.

Variable-Precision DSP Block

Cyclone V devices feature a variable-precision DSP block that supports these features:

- Configurable to support signal processing precisions ranging from 9 x 9, 18 x 18 and 27 x 27 bits natively
- A 64-bit accumulator
- A hard preadder that is available in both 18- and 27-bit modes
- Cascaded output adders for efficient systolic finite impulse response (FIR) filters
- Internal coefficient register banks, 8 deep, for each multiplier in 18- or 27-bit mode
- Fully independent multiplier operation
- A second accumulator feedback register to accommodate complex multiplyaccumulate functions
- Fully independent Efficient support for single-precision floating point arithmetic
- The inferability of all modes by the Intel Quartus Prime design software

Table 16. Variable-Precision DSP Block Configurations for Cyclone V Devices

Usage Example	Multiplier Size (Bit)	DSP Block Resource
Low precision fixed point for video applications	Three 9 x 9	1
Medium precision fixed point in FIR filters	Two 18 x 18	1
FIR filters and general DSP usage	Two 18 x 18 with accumulate	1
High precision fixed- or floating-point implementations	One 27 x 27 with accumulate	1

You can configure each DSP block during compilation as independent three 9 x 9, two 18×18 , or one 27×27 multipliers. With a dedicated 64 bit cascade bus, you can cascade multiple variable-precision DSP blocks to implement even higher precision DSP functions efficiently.

Table 17. Number of Multipliers in Cyclone V Devices

The table lists the variable-precision DSP resources by bit precision for each Cyclone V device.

Variant	Member Code	Variable- precision DSP Block		Independent Input and Output Multiplications Operator			18 x 18 Multiplier Adder

Embedded Memory Configurations

Table 19. Supported Embedded Memory Block Configurations for Cyclone V Devices

This table lists the maximum configurations supported for the embedded memory blocks. The information is applicable only to the single-port RAM and ROM modes.

Memory Block	Depth (bits)	Programmable Width
MLAB	32	x16, x18, or x20
M10K	256	x40 or x32
	512	x20 or x16
	1К	x10 or x8
	2К	x5 or x4
	4К	x2
	8К	×1

Clock Networks and PLL Clock Sources

550 MHz Cyclone V devices have 16 global clock networks capable of up to operation. The clock network architecture is based on Intel's global, quadrant, and peripheral clock structure. This clock structure is supported by dedicated clock input pins and fractional PLLs.

Note: To reduce power consumption, the Intel Quartus Prime software identifies all unused sections of the clock network and powers them down.

External Memory Performance

Table 20. External Memory Interface Performance in Cyclone V Devices

The maximum and minimum operating frequencies depend on the memory interface standards and the supported delay-locked loop (DLL) frequency listed in the device datasheet.

Interface	Voltage	Maximum Free	Minimum Frequency	
	(V)	Hard Controller	Soft Controller	(MHz)
DDR3 SDRAM	1.5	400	303	303
	1.35	400	303	303
DDR2 SDRAM	1.8	400	300	167
LPDDR2 SDRAM	1.2	333	300	167

Low-Power Serial Transceivers

Cyclone V devices deliver the industry's lowest power 6.144 Gbps transceivers at an estimated 88 mW maximum power consumption per channel. Cyclone V transceivers are designed to be compliant with a wide range of protocols and data rates.

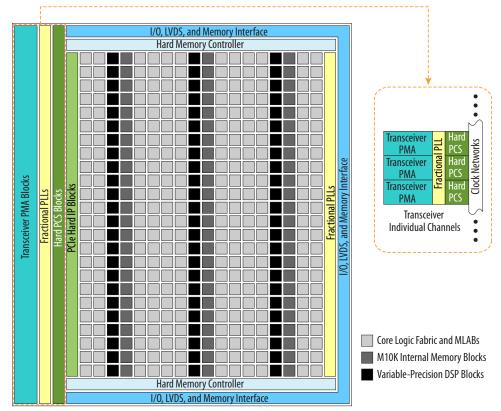

Transceiver Channels

The transceivers are positioned on the left outer edge of the device. The transceiver channels consist of the physical medium attachment (PMA), physical coding sublayer (PCS), and clock networks.

Figure 10. Device Chip Overview for Cyclone V GX and GT Devices

The figure shows a Cyclone V FPGA with transceivers. Different Cyclone V devices may have a different floorplans than the one shown here.

PMA Features

To prevent core and I/O noise from coupling into the transceivers, the PMA block is isolated from the rest of the chip—ensuring optimal signal integrity. For the transceivers, you can use the channel PLL of an unused receiver PMA as an additional transmit PLL.

Table 22. PMA Features of the Transceivers in Cyclone V Devices

Features	Capability		
Backplane support	Driving capability up to 6.144 Gbps		
PLL-based clock recovery	Superior jitter tolerance		
Programmable deserialization and word alignment	Flexible deserialization width and configurable word alignment pattern		
Equalization and pre-emphasis	 Up to 14.37 dB of pre-emphasis and up to 4.7 dB of equalization No decision feedback equalizer (DFE) 		
Ring oscillator transmit PLLs	614 Mbps to 6.144 Gbps		
Input reference clock range	20 MHz to 400 MHz		
Transceiver dynamic reconfiguration	Allows the reconfiguration of a single channel without affecting the operation of other channels		

PCS Features

The Cyclone V core logic connects to the PCS through an 8, 10, 16, 20, 32, or 40 bit interface, depending on the transceiver data rate and protocol. Cyclone V devices contain PCS hard IP to support PCIe Gen1 and Gen2, Gbps Ethernet (GbE), Serial RapidIO[®] (SRIO), and Common Public Radio Interface (CPRI).

Most of the standard and proprietary protocols from 614 Mbps to 6.144 Gbps are supported.

	•	•	continued

⁽¹²⁾ PCIe Gen2 is supported for Cyclone V GT and ST devices. The PCIe Gen2 x4 support is PCIe-compatible.

- ⁽¹³⁾ XAUI is supported through the soft PCS.
- $^{(14)}$ The 0.27-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.
- ⁽¹⁵⁾ The 0.3125-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.

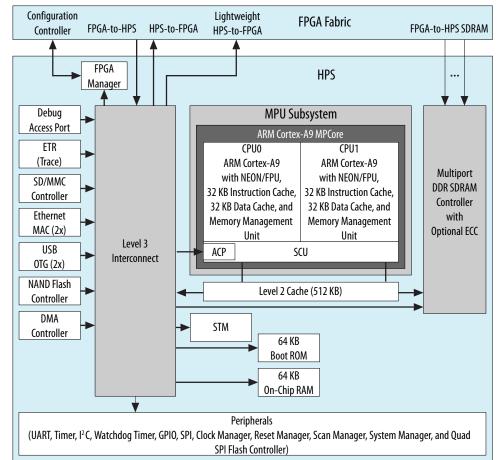

Figure 11. HPS with Dual-Core Arm Cortex-A9 MPCore Processor

System Peripherals and Debug Access Port

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals to interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports Arm CoreSight debug and core traces to facilitate software development.

Cyclone V Device Overview CV-51001 | 2018.05.07

Cyclone V SE and SX devices. December 2013 2013.12.26 Corrected single or dual-core ARM Cortex-A9 MPCore processor-up to 925 Mitz from 800 Mitz. Removed "Preliminary" texts from Ordering Code figures, Maximum Resources, Package Plan and I/O Vertical Migration tables. Removed the note "The number of GPIOs does not include transceiver I/Os. In the Quartus II software, the number of user I/Os includes transceiver I/Os. In the Maximum Resources Counts table for Cyclone V E and SE. Added leaded package options. Removed the note "The number of PLLs includes guerant. Updated Timbedded Hard IPs for Cyclone V GT devices to indicate Maximum 2 hard PCIe and 2 hard memory controllers. Addeel deaded package options. Removed the note "The number of PLLs includes gueran-purpose fractional PLLs and transceiver fractional PLLs." for all PLLs in the Maximum Resource Counts table. Corrected max LVDS counts for transmitter and receiver for Cyclone V E A5 device from 34 to 50. Corrected variable-precision DSP block, 27 x 27 multiplier, 18 x 18 multiplier adder summed with 36 bit input for Cyclone V SE devices from 116 to 150. Corrected VAS and VAS are validated and VA as well as SX C2 and C4 devices from 35 to 32. Corrected VDS transmitter for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 35 to 32. Corrected VAS from 35 to 32. Corrected VADI is supported through the soft PCS in the PCS features for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 35 to 32. Corrected VADI is supported through the soft PCS in the PCS features for Cyclone V SE A2 and A4 a	Date	Version	Changes
MHz from 800 MHz. Removed "Preliminary" texts from Ordering Code figures, Maximum Resources, Package Plan and I/O Vertical Migration tables. Removed the note "The number of GPI05 does not include transceiver I/Os. In the Quartus II software, the number of user /Os includes transceiver I/Os. The GPI05 in the Maximum Resource Counts table for Cyclone V E and SE. • Added limk to Altera Product Selector for each device variant. • Updated Embedded Hard IPs for Cyclone V GT devices to indicate Maximum 2 hard PCI2 and 2 hard memory controllers. • Added leaded package options. • Removed the note. "The number of PLLs includes general-purpose fractional PLLs and transceiver fractional PLLs." for all PLLs in the Maximum Resource Counts table. • Corrected max LVDS counts for transmitter and receiver for Cyclone V E AS device from 14 to 120. • Corrected max LVDS counts for transmitter and receiver for Cyclone V E AS devices from 31 to 120. • Corrected 18 x 18 multiplier of Cyclone V SE devices from 116 to 168. • Corrected 1VDS transmitter for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 31 to 32. • Corrected 1VDS reavers for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 31 to 32. • Corrected 1VDS reavers from May Cycle SE A3 and A4 as well as SX C2 and C4 devices from 31 to 32. • Corrected AVAII is supported through the soft PCS in the PCS features for Cyclone V. • Added the DDR3 SDRAM for the maximum frequency's soft controller and the minimum frequency from 300 to 330 for vollege 1.35V.	July 2014	2014.07.07	Updated the I/O vertical migration figure to clarify the migration capability of Cyclone V SE and SX devices.
 Corrected 18 x 18 multiplier for Cyclone V SE devices from 116 to 168. Corrected 9 x 9 multiplier for Cyclone V SE devices from 174 to 252. Corrected LVDS transmitter for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 31 to 32. Corrected LVDS receiver for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 35 to 37. Corrected transceiver speed grade for Cyclone V ST devices ordering code from 4 to 5. Updated the DDR3 SDRAM for the maximum frequency's soft controller and the minimum frequency from 300 to 303 for voltage 1.35V. Added links to Altera's External Memory Spec Estimator tool to the topics listing the external memory interface performance. Corrected XAUI is supported through the soft PCS in the PCS features for Cyclone V. Added links to the known document issues in the Knowledge Base. Moved all links to the Related Information section of respective topics for easy reference. Corrected the Supporting Feature in Table 1 of Increased bandwidth capacity to '6.144 Gbps'. Updated Description in Table 2 of Low-power high-speed serial interface to '6.144 Gbps'. Updated Description in Table 3 of Cyclone V GT to '6.144 Gbps'. Updated LVDS in the Maximum Resource Counts tables to include Transmitter and Receiver values. Updated LVDS in the Maximum Resource Counts tables to include Transmitter and Receiver values. Updated He package plan with M383 for the Cyclone V E device. Removed the M301 and M383 packages from the Cyclone V GX C4 device Updated the GPI0 count to '129' for the M301 package of the Cyclone V 	December 2013	2013.12.26	 Corrected single or dual-core ARM Cortex-A9 MPCore processor-up to 925 MHz from 800 MHz. Removed "Preliminary" texts from Ordering Code figures, Maximum Resources, Package Plan and I/O Vertical Migration tables. Removed the note "The number of GPIOs does not include transceiver I/Os. In the Quartus II software, the number of user I/Os includes transceiver I/Os." for GPIOs in the Maximum Resource Counts table for Cyclone V E and SE. Added link to Altera Product Selector for each device variant. Updated Embedded Hard IPs for Cyclone V GT devices to indicate Maximum 2 hard PCIe and 2 hard memory controllers. Added leaded package options. Removed the note "The number of PLLs includes general-purpose fractional PLLs and transceiver fractional PLLs." for all PLLs in the Maximum Resource Counts table. Corrected max LVDS counts for transmitter and receiver for Cyclone V E A9 device from 140 to 120. Corrected variable-precision DSP block, 27 x 27 multiplier, 18 x 18 multiplier adder mode and 18 x 18 multiplier adder summed with 36 bit
 May 2013 2013.05.06 Added link to the known document issues in the Knowledge Base. Moved all links to the Related Information section of respective topics for easy reference. Corrected the title to the PCIe hard IP topic. Cyclone V devices support only PCIe Gen1 and Gen2. Updated Supporting Feature in Table 1 of Increased bandwidth capacity to '6.144 Gbps'. Updated Description in Table 2 of Low-power high-speed serial interface to '6.144 Gbps'. Updated Description in Table 3 of Cyclone V GT to '6.144 Gbps'. Updated the M386 package to M383 for Figure 1, Figure 2 and Figure 3. Updated LVDS in the Maximum Resource Counts tables to include Transmitter and Receiver values. Updated the m301 and M383 packages from the Cyclone V GX C4 device Updated the GPIO count to '129' for the M301 package of the Cyclone V 			 Corrected 18 x 18 multiplier for Cyclone V SE devices from 116 to 168. Corrected 9 x 9 multiplier for Cyclone V SE devices from 174 to 252. Corrected LVDS transmitter for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 31 to 32. Corrected LVDS receiver for Cyclone V SE A2 and A4 as well as SX C2 and C4 devices from 35 to 37. Corrected transceiver speed grade for Cyclone V ST devices ordering code from 4 to 5. Updated the DDR3 SDRAM for the maximum frequency's soft controller and the minimum frequency from 300 to 303 for voltage 1.35V. Added links to Altera's External Memory Spec Estimator tool to the topics listing the external memory interface performance. Corrected XAUI is supported through the soft PCS in the PCS features for Cyclone V.
Updated 5 Gbps to '6.144 Gbps' forCyclone V GT device.	May 2013	2013.05.06	 Added link to the known document issues in the Knowledge Base. Moved all links to the Related Information section of respective topics for easy reference. Corrected the title to the PCIe hard IP topic. Cyclone V devices support only PCIe Gen1 and Gen2. Updated Supporting Feature in Table 1 of Increased bandwidth capacity to '6.144 Gbps'. Updated Description in Table 2 of Low-power high-speed serial interface to '6.144 Gbps'. Updated Description in Table 3 of Cyclone V GT to '6.144 Gbps'. Updated the M386 package to M383 for Figure 1, Figure 2 and Figure 3. Updated Figure 2 and Figure 3 for Transceiver Count by adding 'F : 4'. Updated LVDS in the Maximum Resource Counts tables to include Transmitter and Receiver values. Updated the M301 and M383 packages from the Cyclone V GX C4 device. Updated the GPIO count to '129' for the M301 package of the Cyclone V GX C5 device.

aid A6. Updated Memory (Kb) for Maximum Resource Counts for Cyclone V SE A and A6, SX C4 and C6, ST D6 devices. Updated PGA PLL for Maximum Resource Counts for Cyclone V SE A2, S (2, devices. Removed '36 x 36' from the Variable-Precision DSP Block. Updated HPG PLL for Maximum Resource Counts for Cyclone V SE A4, SC (2, devices. Not and ST devices. Updated HPS I/O counts for Cyclone V SX C4 device. Updated HPS I/O counts for Cyclone V SX C4 device. Updated HPS I/O counts for Cyclone V SX C4 device. Updated HPS I/O counts for Cyclone V SX C4 device. Updated Memory Capacity and Distribution table for Cyclone SE A4 and A6, SX C4 and C6, ST D6 devices. Removed 'Gounter reconfiguration' from the PLL Features. Updated Low-Power Serial Transceivers by replacing 5 Gbps with 6.144 Gbps. Removed 'Distributed Memory' symbol. Updated the Capability in Table 23 of Dackplane support to '6.144 Gbps'. Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. Updated the partial reconfiguration is an advanced feature. Contact Atte for support of the feature. Oteps: December 2012 2012.12.28 Updated the OFIO counts for the MBGA packages. Updated the option tors for the MBGA packages. Updated the OFIO counts for the VH44 package of the Cyclone V E A9, C (9, and GT) ad devices. November 2012 2012.11.19 Added new MBGA packages and additional U449 packages. Updated the vertical migrati	Date	Version	Changes
and A6, SX C4 and C6, ST D6 devices.Updated PGA PLL for Maximum Resource Counts for Cyclone V SE A2, SC (2, devices).Removed '26 x 36' from the Variable-Precision DSP Block.Updated Variable-precision DSP Blocks and 18 x 18 Multiplier for Maximum Resource Counts for Cyclone V SX C4 device.Updated Table 17 for Cyclone V SX C4 device.Updated Table 17 for Cyclone V SX C4 device.Updated Enbedded Memory Capacity and Distribution table.Updated Enbedded Memory Capacity and Distribution table for Cyclone V SK C4 device.Updated Low-Power Serial Transceivers by replacing 5 Gbps with 6.144 Gbps.Removed 'Counter reconfiguration' from the PLL Features.Updated Low-Power Serial Transceivers by replacing 5 Gbps.Updated the Capability in Table 22 of Ring oscillator transmit PLs with 6.144 Gbps.Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic 1 '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic 1 '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CRI 4.1 to '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CRI 4.1 to '6.144 Gbps'.Updated the GPIO counts for the MBGA packages.Updated the GPIO counts for the VBA package of the Cyclone V E A9, C C9, and GT D9 devices.Updated the GPIO counts for the VBA package of the Cyclone V E A9, C C9, and GT D9 devices.Updated the Wertical migration table for vertical migration of the U484 package.Updated the WBGA packages and additional U484 packages for Cyclone V GX and GT.Added ordering code for five-transceiver devices for Cyclone V GX and CFI.Updated the Vertical migration table to add MBGA packages.Adde			and A6.

Updated Capability in Table 22 of Ring oscillator transmit PLLs with 6.144 Gbps.Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.Updated the PCS Support in Table 23 of 3 Gbps and 6 Gbps Basic t '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.December 20122012.12.28Updated the pin counts for the MBGA packages.Updated the GPIO and transceiver counts for the MBGA packages.Updated the CPI Counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices.Updated the CPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices.Vupdated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.Added performance information for HPS memory controller.Removed DDR3U support.Updated Cryclone V ST speed grade information.Added information on maximum transceiver channel usage restrictions fo PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Removed 'Distributed Memory' symbol.
6.144 Gbps. • Updated the DCS Support in Table 23 from 5 Gbps to '6 Gbps'. • Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic t '6.144 Gbps'. • Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. • Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. • Updated the partial reconfiguration is an advanced feature. Contact Alter for support of the feature. December 2012 2012.12.28 • Updated the GPIO and transceiver counts for the MBGA packages. • Updated the Vertical migration table for vertical migration of the U484 package of the Cyclone V E A9, C C9, and GT D9 devices. • Updated the Vertical migration table for vertical migration of the U484 packages. • Updated the Vertical migration table or vertical migration of the U484 packages for Cyclone V GX, and GT. November 2012 2012.11.19 • Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. • Updated the vertical migration table to add MBGA packages. • Added performance information for HPS memory controller. • Removed DDR3U support. • Updated Cyclone V ST speed grade information. • Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template. July 2012 2.1 </td <td></td> <td></td> <td>• Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'.</td>			• Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'.
 Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic to (5.144 Gbps'). Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature. December 2012 2012.12.28 Updated the GPI0 and transceiver counts for the MBGA packages. Updated the GPI0 counts for the U484 package of the Cyclone V E A9, GC9, and GT D9 devices. Updated the GPI0 counts for the U484 package of the Updated the Updated the Vertical migration table for vertical migration of the U484 packages. Updated the MLAB supported programmable widths at 32 bits depth. November 2012 2012.11.19 Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added opering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added operformance information for HPS memory controller. Removed DDR3U support. Updated the or the differences between GPI0 reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible) June 2012 Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			
'6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature.December 20122012.12.28Updated the GPIO and transceiver counts for the MBGA packages.Updated the GPIO counts for the U484 package of the Cyclone V E A9, GC 9, and GT D9 devices.Updated the vertical migration table for vertical migration of the U484 packages.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.November 20122012.11.19Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.Added ordering code for five-transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.Added onte on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added the "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.
Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature.December 20122012.12.28Updated the pin counts for the MBGA packages. Updated the GPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices. Updated the vertical migration table for vertical migration of the U484 packages. Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added performance information for HPS memory controller. Removed DDR3U support. Updated the vertical and update tables for Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPR 14 4.9152 Gbps transmit jitter compliance. Added template.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added table 1, Table 3, Table 16, Table 19, and Table 20.			
for support of the feature.December 20122012.12.28Updated the pin counts for the MBGA packages. Updated the GPIO and transceiver counts for the MBGA packages. Updated the GPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices. Updated the vertical migration table for vertical migration of the U484 packages. Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19• Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. • Added ordering code for five-transceiver devices for Cyclone V GT and S* Updated the vertical migration table to add MBGA packages. • Added performance information for HPS memory controller. • Removed DDR3U support. • Updated information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. • Added onte on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0• Restructured the document. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			• Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.
• Updated the GPIO and transceiver counts for the MBGA packages.• Updated the GPIO counts for the U484 package of the Cyclone V E A9, G C9, and GT D9 devices.• Updated the vertical migration table for vertical migration of the U484 packages.• Updated the vertical migration table for vertical migration of the U484 packages.• Updated the vertical migration table for vertical migration of the U484 packages.• Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19• Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.• Added ordering code for five-transceiver devices for Cyclone V GT and S • Updated the vertical migration table to add MBGA packages.• Added performance information for HPS memory controller.• Removed DDR3U support.• Updated Cyclone V ST speed grade information.• Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0• Restructured the document.• Added the "Embedded Memory Configurations" sections.• Added Table 1, Table 3, Table 16, Table 19, and Table 20. packages.November 20122012.11.19• Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. • Added ordering code for five-transceiver devices for Cyclone V GT and S • Updated the vertical migration table to add MBGA packages. • Added performance information for HPS memory controller. • Removed DDR3U support. • Updated Cyclone V ST speed grade information. • Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. • Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0• Restructured the document. • Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			C9, and GT D9 devices.
November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added performance information for HPS memory controller. Removed DDR3U support. Updated Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added the "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and SUpdated the vertical migration table to add MBGA packages.Added performance information for HPS memory controller.Removed DDR3U support.Updated Cyclone V ST speed grade information.Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Updated the MLAB supported programmable widths at 32 bits depth.
• Updated the vertical migration table to add MBGA packages.• Added performance information for HPS memory controller.• Removed DDR3U support.• Updated Cyclone V ST speed grade information.• Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.• Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.• Updated template.July 20122.1June 20122.0• Restructured the document.• Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.• Added Table 1, Table 3, Table 16, Table 19, and Table 20.	November 2012	2012.11.19	 Added new MBGA packages and additional U484 packages for Cyclone V E, GX, and GT.
 Added performance information for HPS memory controller. Removed DDR3U support. Updated Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) June 2012 Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			• Added ordering code for five-transceiver devices for Cyclone V GT and ST.
 Removed DDR3U support. Updated Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) June 2012 Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			 Updated the vertical migration table to add MBGA packages.
• Updated Cyclone V ST speed grade information.• Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.• Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template.July 20122.1June 20122.0• Restructured the document. 			Added performance information for HPS memory controller.
 Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) Intersection and the difference. Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			
PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
User I/O numbers shown in the Quartus II software.Updated template.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.
July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) June 2012 2.0 • Restructured the document. • Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
June 2012 2.0 • Restructured the document. • Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			•
 Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 	July 2012	2.1	Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)
Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.	June 2012	2.0	
• Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
 Updated Table 2, Table 4, Table 5, Table 6, Table 7, Table 8, Table 9, Table 10, Table 11, Table 12, Table 13, Table 14, Table 17, and Table 18. 			• Updated Table 2, Table 4, Table 5, Table 6, Table 7, Table 8, Table 9, Table

Cyclone V Device Overview CV-51001 | 2018.05.07

Date	Version	Changes
		 Updated Figure 1, Figure 2, Figure 3, Figure 4, Figure 5, Figure 6, and Figure 10. Updated the "FPGA Configuration and Processor Booting" and "Hardware and Software Development" sections. Text edits throughout the document.
February 2012	1.2	 Updated Table 1–2, Table 1–3, and Table 1–6. Updated "Cyclone V Family Plan" on page 1–4 and "Clock Networks and PLL Clock Sources" on page 1–15. Updated Figure 1–1 and Figure 1–6.
November 2011	1.1	 Updated Table 1–1, Table 1–2, Table 1–3, Table 1–4, Table 1–5, and Table 1–6. Updated Figure 1–4, Figure 1–5, Figure 1–6, Figure 1–7, and Figure 1–8. Updated "System Peripherals" on page 1–18, "HPS-FPGA AXI Bridges" on page 1–19, "HPS SDRAM Controller Subsystem" on page 1–19, "FPGA Configuration and Processor Booting" on page 1–19, and "Hardware and Software Development" on page 1–20. Minor text edits.
October 2011	1.0	Initial release.
