Understanding <u>Embedded - FPGAs (Field</u> <u>Programmable Gate Array)</u>

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Active
Number of LABs/CLBs	9434
Number of Logic Elements/Cells	25000
Total RAM Bits	2002944
Number of I/O	224
Number of Gates	-
Voltage - Supply	1.07V ~ 1.13V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	484-FBGA
Supplier Device Package	484-UBGA (19x19)

Cyclone V Device Overview

The Cyclone[®] V devices are designed to simultaneously accommodate the shrinking power consumption, cost, and time-to-market requirements; and the increasing bandwidth requirements for high-volume and cost-sensitive applications.

Enhanced with integrated transceivers and hard memory controllers, the Cyclone V devices are suitable for applications in the industrial, wireless and wireline, military, and automotive markets.

Key Advantages of Cyclone V Devices

Table 1. Key Advantages of the Cyclone V Device Family

Advantage	Supporting Feature
Lower power consumption	 Built on TSMC's 28 nm low-power (28LP) process technology and includes an abundance of hard intellectual property (IP) blocks Up to 40% lower power consumption than the previous generation device
Improved logic integration and differentiation capabilities	 8-input adaptive logic module (ALM) Up to 13.59 megabits (Mb) of embedded memory Variable-precision digital signal processing (DSP) blocks
Increased bandwidth capacity	3.125 gigabits per second (Gbps) and 6.144 Gbps transceiversHard memory controllers
Hard processor system (HPS) with integrated Arm* Cortex*-A9 MPCore* processor	 Tight integration of a dual-core Arm Cortex-A9 MPCore processor, hard IP, and an FPGA in a single Cyclone V system-on-a-chip (SoC) Supports over 128 Gbps peak bandwidth with integrated data coherency between the processor and the FPGA fabric
Lowest system cost	 Requires only two core voltages to operate Available in low-cost wirebond packaging Includes innovative features such as Configuration via Protocol (CvP) and partial reconfiguration

⁽⁹⁾ 1 PCIe Hard IP Block in U672 package.

Table 16. Variable-Precision DSP Block Configurations for Cyclone V Devices

Usage Example	Multiplier Size (Bit)	DSP Block Resource
Low precision fixed point for video applications	Three 9 x 9	1
Medium precision fixed point in FIR filters	Two 18 x 18	1
FIR filters and general DSP usage	Two 18 x 18 with accumulate	1
High precision fixed- or floating-point implementations	One 27 x 27 with accumulate	1

You can configure each DSP block during compilation as independent three 9 x 9, two 18×18 , or one 27×27 multipliers. With a dedicated 64 bit cascade bus, you can cascade multiple variable-precision DSP blocks to implement even higher precision DSP functions efficiently.

Table 17. Number of Multipliers in Cyclone V Devices

The table lists the variable-precision DSP resources by bit precision for each Cyclone V device.

Embedded Memory Blocks

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

Types of Embedded Memory

The Cyclone V devices contain two types of memory blocks:

- 10 Kb M10K blocks—blocks of dedicated memory resources. The M10K blocks are ideal for larger memory arrays while still providing a large number of independent ports.
- 640 bit memory logic array blocks (MLABs)—enhanced memory blocks that are configured from dual-purpose logic array blocks (LABs). The MLABs are ideal for wide and shallow memory arrays. The MLABs are optimized for implementation of shift registers for digital signal processing (DSP) applications, wide shallow FIFO buffers, and filter delay lines. Each MLAB is made up of ten adaptive logic modules (ALMs). In the Cyclone V devices, you can configure these ALMs as ten 32 x 2 blocks, giving you one 32 x 20 simple dual-port SRAM block per MLAB.

Embedded Memory Capacity in Cyclone V Devices

Table 18. Embedded Memory Capacity and Distribution in Cyclone V Devices

	Member	М10К		ML	Total RAM Bit					
Variant Code		Block	RAM Bit (Kb)	Block	RAM Bit (Kb)	(Kb)				
Cyclone V E	A2	176	1,760	314	196	1,956				
	A4	308	3,080	485	303	3,383

	C7	686	6,860	1338	836	7,696				
	C9	1,220	12,200	2748	1,717	13,917				
					continued					

PCIe Gen1 and Gen2 Hard IP

Cyclone V GX, GT, SX, and ST devices contain PCIe hard IP that is designed for performance and ease-of-use. The PCIe hard IP consists of the MAC, data link, and transaction layers.

The PCIe hard IP supports PCIe Gen2 and Gen1 end point and root port for up to x4 lane configuration. The PCIe Gen2 x4 support is PCIe-compatible.

The PCIe endpoint support includes multifunction support for up to eight functions, as shown in the following figure. The integrated multifunction support reduces the FPGA logic requirements by up to 20,000 LEs for PCIe designs that require multiple peripherals.

Figure 9. PCIe Multifunction for Cyclone V Devices

The Cyclone V PCIe hard IP operates independently from the core logic. This independent operation allows the PCIe link to wake up and complete link training in less than 100 ms while the Cyclone V device completes loading the programming file for the rest of the device.

In addition, the PCIe hard IP in the Cyclone V device provides improved end-to-end datapath protection using ECC.

External Memory Interface

This section provides an overview of the external memory interface in Cyclone V devices.

Hard and Soft Memory Controllers

Cyclone V devices support up to two hard memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices. Each controller supports 8 to 32 bit components of up to 4 gigabits (Gb) in density with two chip selects and optional ECC. For the Cyclone V SoC devices, an additional hard memory controller in the HPS supports DDR3, DDR2, and LPDDR2 SDRAM devices.

All Cyclone V devices support soft memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices for maximum flexibility.

External Memory Performance

Table 20. External Memory Interface Performance in Cyclone V Devices

The maximum and minimum operating frequencies depend on the memory interface standards and the supported delay-locked loop (DLL) frequency listed in the device datasheet.

Interface	Voltage	Maximum Free	Minimum Frequency	
	(V)	Hard Controller	Soft Controller	(MHz)
DDR3 SDRAM	1.5	400	303	303
	1.35	400	303	303
DDR2 SDRAM	1.8	400	300	167
LPDDR2 SDRAM	1.2	333	300	167

Low-Power Serial Transceivers

Cyclone V devices deliver the industry's lowest power 6.144 Gbps transceivers at an estimated 88 mW maximum power consumption per channel. Cyclone V transceivers are designed to be compliant with a wide range of protocols and data rates.

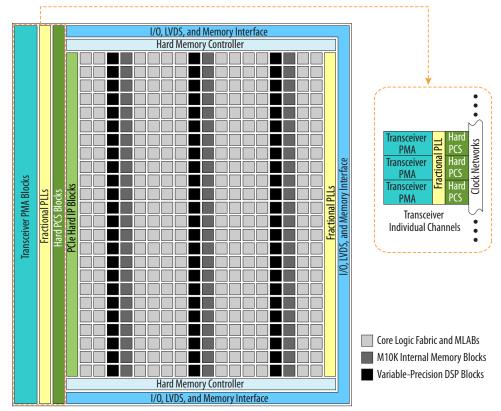

Transceiver Channels

The transceivers are positioned on the left outer edge of the device. The transceiver channels consist of the physical medium attachment (PMA), physical coding sublayer (PCS), and clock networks.

Figure 10. Device Chip Overview for Cyclone V GX and GT Devices

The figure shows a Cyclone V FPGA with transceivers. Different Cyclone V devices may have a different floorplans than the one shown here.

PMA Features

To prevent core and I/O noise from coupling into the transceivers, the PMA block is isolated from the rest of the chip—ensuring optimal signal integrity. For the transceivers, you can use the channel PLL of an unused receiver PMA as an additional transmit PLL.

Table 22. PMA Features of the Transceivers in Cyclone V Devices

Features	Capability
Backplane support	Driving capability up to 6.144 Gbps
PLL-based clock recovery	Superior jitter tolerance
Programmable deserialization and word alignment	Flexible deserialization width and configurable word alignment pattern
Equalization and pre-emphasis	 Up to 14.37 dB of pre-emphasis and up to 4.7 dB of equalization No decision feedback equalizer (DFE)
Ring oscillator transmit PLLs	614 Mbps to 6.144 Gbps
Input reference clock range	20 MHz to 400 MHz
Transceiver dynamic reconfiguration	Allows the reconfiguration of a single channel without affecting the operation of other channels

PCS Features

The Cyclone V core logic connects to the PCS through an 8, 10, 16, 20, 32, or 40 bit interface, depending on the transceiver data rate and protocol. Cyclone V devices contain PCS hard IP to support PCIe Gen1 and Gen2, Gbps Ethernet (GbE), Serial RapidIO[®] (SRIO), and Common Public Radio Interface (CPRI).

Most of the standard and proprietary protocols from 614 Mbps to 6.144 Gbps are supported.

Table 23.	Transceiver PCS	Features for C	vclone V Devices
		i cutui co i ci c	

PCS Support	Data Rates (Gbps)	Transmitter Data Path Feature	Receiver Data Path Feature
3-Gbps and 6-Gbps Basic	0.614 to 6.144	 Phase compensation FIFO Byte serializer 8B/10B encoder Transmitter bit-slip 	 Word aligner Deskew FIFO Rate-match FIFO 8B/10B decoder Byte deserializer Byte ordering Receiver phase compensation FIFO

		•	continued

⁽¹²⁾ PCIe Gen2 is supported for Cyclone V GT and ST devices. The PCIe Gen2 x4 support is PCIe-compatible.

- ⁽¹³⁾ XAUI is supported through the soft PCS.
- $^{(14)}$ The 0.27-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.
- ⁽¹⁵⁾ The 0.3125-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.

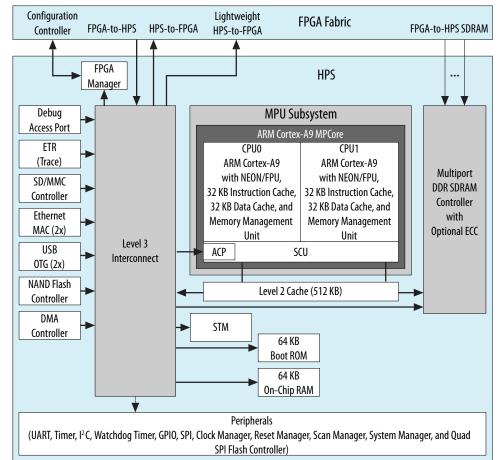

Figure 11. HPS with Dual-Core Arm Cortex-A9 MPCore Processor

System Peripherals and Debug Access Port

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals to interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports Arm CoreSight debug and core traces to facilitate software development.

HPS-FPGA AXI Bridges

The HPS–FPGA bridges, which support the Advanced Microcontroller Bus Architecture (AMBA[®]) Advanced eXtensible Interface (AXI[™]) specifications, consist of the following bridges:

- FPGA-to-HPS AXI bridge—a high-performance bus supporting 32, 64, and 128 bit data widths that allows the FPGA fabric to issue transactions to slaves in the HPS.
- HPS-to-FPGA AXI bridge—a high-performance bus supporting 32, 64, and 128 bit data widths that allows the HPS to issue transactions to slaves in the FPGA fabric.
- Lightweight HPS-to-FPGA AXI bridge—a lower latency 32 bit width bus that allows the HPS to issue transactions to slaves in the FPGA fabric. This bridge is primarily used for control and status register (CSR) accesses to peripherals in the FPGA fabric.

The HPS-FPGA AXI bridges allow masters in the FPGA fabric to communicate with slaves in the HPS logic, and vice versa. For example, the HPS-to-FPGA AXI bridge allows you to share memories instantiated in the FPGA fabric with one or both microprocessors in the HPS, while the FPGA-to-HPS AXI bridge allows logic in the FPGA fabric to access the memory and peripherals in the HPS.

Each HPS–FPGA bridge also provides asynchronous clock crossing for data transferred between the FPGA fabric and the HPS.

HPS SDRAM Controller Subsystem

The HPS SDRAM controller subsystem contains a multiport SDRAM controller and DDR PHY that are shared between the FPGA fabric (through the FPGA-to-HPS SDRAM interface), the level 2 (L2) cache, and the level 3 (L3) system interconnect. The FPGA-to-HPS SDRAM interface supports AMBA AXI and Avalon[®] Memory-Mapped (Avalon-MM) interface standards, and provides up to six individual ports for access by masters implemented in the FPGA fabric.

To maximize memory performance, the SDRAM controller subsystem supports command and data reordering, deficit round-robin arbitration with aging, and high-priority bypass features. The SDRAM controller subsystem supports DDR2, DDR3, or LPDDR2 devices up to 4 Gb in density operating at up to 400 MHz (800 Mbps data rate).

FPGA Configuration and Processor Booting

The FPGA fabric and HPS in the SoC are powered independently. You can reduce the clock frequencies or gate the clocks to reduce dynamic power, or shut down the entire FPGA fabric to reduce total system power.

You can configure the FPGA fabric and boot the HPS independently, in any order, providing you with more design flexibility:

- You can boot the HPS independently. After the HPS is running, the HPS can fully or
 partially reconfigure the FPGA fabric at any time under software control. The HPS
 can also configure other FPGAs on the board through the FPGA configuration
 controller.
- You can power up both the HPS and the FPGA fabric together, configure the FPGA fabric first, and then boot the HPS from memory accessible to the FPGA fabric.

Note: Although the FPGA fabric and HPS are on separate power domains, the HPS must remain powered up during operation while the FPGA fabric can be powered up or down as required.

Related Information

Cyclone V Device Family Pin Connection Guidelines

Provides detailed information about power supply pin connection guidelines and power regulator sharing.

Hardware and Software Development

For hardware development, you can configure the HPS and connect your soft logic in the FPGA fabric to the HPS interfaces using the Platform Designer (Standard) system integration tool in the Intel Quartus Prime software.

For software development, the Arm-based SoC devices inherit the rich software development ecosystem available for the Arm Cortex-A9 MPCore processor. The software development process for Intel SoCs follows the same steps as those for other SoC devices from other manufacturers. Support for Linux, VxWorks[®], and other operating systems is available for the SoCs. For more information on the operating systems support availability, contact the Intel sales team.

You can begin device-specific firmware and software development on the Intel SoC Virtual Target. The Virtual Target is a fast PC-based functional simulation of a target development system—a model of a complete development board that runs on a PC. The Virtual Target enables the development of device-specific production software that can run unmodified on actual hardware.

Dynamic and Partial Reconfiguration

The Cyclone V devices support dynamic reconfiguration and partial reconfiguration.

Dynamic Reconfiguration

The dynamic reconfiguration feature allows you to dynamically change the transceiver data rates, PMA settings, or protocols of a channel, without affecting data transfer on adjacent channels. This feature is ideal for applications that require on-the-fly multiprotocol or multirate support. You can reconfigure the PMA and PCS blocks with dynamic reconfiguration.

Partial Reconfiguration

Note: The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

Partial reconfiguration allows you to reconfigure part of the device while other sections of the device remain operational. This capability is important in systems with critical uptime requirements because it allows you to make updates or adjust functionality without disrupting services.

Apart from lowering cost and power consumption, partial reconfiguration increases the effective logic density of the device because placing device functions that do not operate simultaneously is not necessary. Instead, you can store these functions in external memory and load them whenever the functions are required. This capability reduces the size of the device because it allows multiple applications on a single device—saving the board space and reducing the power consumption.

Intel simplifies the time-intensive task of partial reconfiguration by building this capability on top of the proven incremental compile and design flow in the Intel Quartus Prime design software. With the Intel solution, you do not need to know all the intricate device architecture details to perform a partial reconfiguration.

Partial reconfiguration is supported through the FPP x16 configuration interface. You can seamlessly use partial reconfiguration in tandem with dynamic reconfiguration to enable simultaneous partial reconfiguration of both the device core and transceivers.

Enhanced Configuration and Configuration via Protocol

Cyclone V devices support 1.8 V, 2.5 V, 3.0 V, and 3.3 V programming voltages and several configuration schemes.

Mode	Data Width	Max Clock Rate (MHz)	Max Data Rate (Mbps)	Decompressi on	Design Security	Partial Reconfigurat ion ⁽¹⁸⁾	Remote System Update
AS through the EPCS and EPCQ serial configuration device	1 bit, 4 bits	100	_	Yes	Yes	_	Yes
PS through CPLD or external microcontroller	1 bit	125	125	Yes	Yes	_	_
FPP	8 bits	125	_	Yes	Yes	_	Parallel flash
	16 bits	125	_	Yes	Yes	Yes	loader
CvP (PCIe)	x1, x2, and x4 lanes	-	_	Yes	Yes	Yes	_
JTAG	1 bit	33	33	-	_	_	_

 Table 24.
 Configuration Schemes and Features Supported by Cyclone V Devices

Instead of using an external flash or ROM, you can configure the Cyclone V devices through PCIe using CvP. The CvP mode offers the fastest configuration rate and flexibility with the easy-to-use PCIe hard IP block interface. The Cyclone V CvP implementation conforms to the PCIe 100 ms power-up-to-active time requirement.

Related Information

Configuration via Protocol (CvP) Implementation in Intel FPGAs User Guide Provides more information about CvP.

⁽¹⁸⁾ The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

Cyclone V Device Overview CV-51001 | 2018.05.07

Cyclone V SE and SX devices. December 2013 2013.12.26 Corrected single or dual-core ARM Cortex-A9 MPCore processor-up t MHz from 800 MHz. Removed "Preliminary" texts from Ordering Code figures, Maximum Resources, Package Phan and I/O Vertical Migration tables. Removed "Preliminary" texts from Ordering Code figures, Maximum Resources, Package Phan and I/O Vertical Migration tables. Added link to Altera Product Selector for each device variant. Updated Embedded Hard IPs for Cyclone V GT devices to indicate Maximum 2 hard PCIe and 2 hard memory controllers. Added leaded package options. Removed the note "The number of PLIs includes general-purpose fractional PLLs and transceiver fractional PLLs" for all PLLs in the Maximum Resource Counts table. Corrected max LVDS counts for transmitter and receiver for Cyclone A3 device from 140 to 120. Corrected variable-precision DSP block, 27 x 27 multiplier, 18 x 18 multiplier adder mode and 18 x 18 multiplier adder summed with 36 input for Cyclone V SE devices from 15 to 84. Corrected 1 VDS transmitter for Cyclone V SE A2 and A4 as well as SX and C4 devices from 31 to 32. Corrected 1VDS transmitter for Cyclone V SE A2 and A4 as well as SX and C4 devices from 31 to 37. Corrected 1VDS receiver for Cyclone V SE A2 and A4 as well as SX of C4 devices from 31 to 37. Corrected transciever speed grade for Cyclone V ST devices ordering from 4 to 5. Updated the DDR3 SDRAM for the maximum frequency's soft contro and the minimum frequency from 300 to 303 for voltage 1.35V. Added links to hare S Sterenal Memory Spec Estimator tool t	Date	Version	Changes
MH2 from 800 MH2. Removed Preliminary" texts from Ordering Code figures, Maximum Resources, Package Plan and I/O Vertical Migraton tables. Removed the note "The number of GPIOs does not include transceive I/Os." for GPIOs in the Maximum Resource Counts table Cyclone V E and SE. Added link to Altera Product Selector for each device variant. Updated Embedded Hard IPs for Cyclone V GT devices to indicate Maximum 2 hard PCIe and 2 hard memory controllers. Added leade package options. Removed the note "The number of PLLs includes general-purpose fractional PLLs and transceiver factional PLLs and transceiver for Cyclone V GT devices to indicate Maximum Resource Counts table. Corrected max LVDS counts for transmitter and receiver for Cyclone A5 device from 84 to 60. Corrected max LVDS counts for transmitter and receiver for Cyclone A5 device from 140 to 120. Corrected Variable-precision DSP block, 27 x 27 multiplier, 18 x 18 multiplier adder mode and 18 x 18 multiplier adder subs and and 18 x 18 multiplier adder subs and 18 x 18 multiplier for Cyclone V SE devices from 116 to 11. Corrected 18 x 18 multiplier for Cyclone V SE 2 and A4 as well as SX and C4 devices from 35 to 37. Corrected 1VDS transmitter for Cyclone V SE 42 and A4 as well as SX and C4 devices from 35 to 37. Corrected 14 transceiver speed grade for Cyclone V ST devices ordering from 4 to 5. Updated the DDR3 SDRAM for the maximum frequency's soft coating from 4 to 5. Updated the DDR3 SDRAM for the Rovinedge Base. Cadded lin	July 2014	2014.07.07	Updated the I/O vertical migration figure to clarify the migration capability of Cyclone V SE and SX devices.
 Corrected 18 x 18 multiplier for Cyclone V SE devices from 116 to 14 Corrected 9 x 9 multiplier for Cyclone V SE devices from 174 to 252. Corrected LVDS transmitter for Cyclone V SE A2 and A4 as well as S and C4 devices from 31 to 32. Corrected LVDS receiver for Cyclone V SE A2 and A4 as well as SX C C4 devices from 35 to 37. Corrected transceiver speed grade for Cyclone V ST devices ordering from 4 to 5. Updated the DDR3 SDRAM for the maximum frequency's soft contro and the minimum frequency from 300 to 303 for voltage 1.35V. Added links to Altera's External Memory Spec Estimator tool to the t listing the external memory interface performance. Corrected XAUI is supported through the soft PCS in the PCS feature Cyclone V. Added decompression support for the CvP configuration mode. May 2013 2013.05.06 Added link to the known document issues in the Knowledge Base. Moved all links to the Related Information section of respective topic easy reference. Corrected the title to the PCIe hard IP topic. Cyclone V devices supp only PCIE Gen1 and Gen2. Updated Supporting Feature in Table 1 of Increased bandwidth capaar '6.144 Gbps'. Updated Description in Table 2 of Low-power high-speed serial interface 1.44 Gbps'. Updated LVDS in the M386 package to M383 for Figure 1, Figure 2 and Figure 1.44 Gbps'. Updated LVDS in the Maximum Resource Counts tables to include Transmitter and Receiver values. 	December 2013	2013.12.26	 Corrected single or dual-core ARM Cortex-A9 MPCore processor-up to 925 MHz from 800 MHz. Removed "Preliminary" texts from Ordering Code figures, Maximum Resources, Package Plan and I/O Vertical Migration tables. Removed the note "The number of GPIOs does not include transceiver I/Os. In the Quartus II software, the number of user I/Os includes transceiver I/Os." for GPIOs in the Maximum Resource Counts table for Cyclone V E and SE. Added link to Altera Product Selector for each device variant. Updated Embedded Hard IPs for Cyclone V GT devices to indicate Maximum 2 hard PCIe and 2 hard memory controllers. Added leaded package options. Removed the note "The number of PLLs includes general-purpose fractional PLLs and transceiver fractional PLLs." for all PLLs in the Maximum Resource Counts table. Corrected max LVDS counts for transmitter and receiver for Cyclone V E A9 device from 140 to 120. Corrected variable-precision DSP block, 27 x 27 multiplier, 18 x 18 multiplier adder mode and 18 x 18 multiplier adder summed with 36 bit

6.144 Gbps. Removed 'Distributed Memory' symbol. Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'. Updated the Capability in Table 23 from 5 Gbps to '6 Gbps'. Updated the PCS Support in Table 23 of 3 Gbps and 6 Gbps Basic to '6.144 Gbps'. Updated the Data Rates (Gbps) in Table 23 of 2 GPRI 4.1 to '6.144 Gbps'. Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. Clarified that partial reconfiguration is an advanced feature. Contact Alte for support of the feature. December 2012 2012.12.28 Updated the GPIO and transceiver counts for the MBGA packages. Updated the GPIO and transceiver counts for the U484 package of the Cyclone V E A9, C C, O, and GT D9 devices. Updated the Vertical migration table for vertical migration of the U484 packages. Updated the MLB supported programmable widths at 32 bits depth. November 2012 2012.11.19 Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added ordering code for five-transceiver channel usage restrictions for PCI Gen2 and CPR			Removed 'Counter reconfiguration' from the PLL Features.
•Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'.•Updated Capability in Table 22 of Ring oscillator transmit PLLs with 6.144 Gbps.•Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.•Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic to '6.144 Gbps'.•Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.•Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.•Clarified that partial reconfiguration is an advanced feature. Contact Alte for support of the feature.December 20122012.12.28Updated the GPIO counts for the MBGA packages. 			
Updated Capability in Table 22 of Ring oscillator transmit PLLs with 6.144 Gbps.Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.Updated the PCS Support in Table 23 of 3 Gbps and 6 Gbps Basic t '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.December 20122012.12.28Updated the pin counts for the MBGA packages.Updated the GPIO and transceiver counts for the MBGA packages.Updated the CPI Counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices.Updated the CPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices.Vupdated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.Added performance information for HPS memory controller.Removed DDR3U support.Updated Cryclone V ST speed grade information.Added information on maximum transceiver channel usage restrictions fo PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Removed 'Distributed Memory' symbol.
6.144 Gbps. • Updated the DCS Support in Table 23 from 5 Gbps to '6 Gbps'. • Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic t '6.144 Gbps'. • Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. • Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. • Updated the partial reconfiguration is an advanced feature. Contact Alter for support of the feature. December 2012 2012.12.28 • Updated the GPIO and transceiver counts for the MBGA packages. • Updated the Vertical migration table for vertical migration of the U484 package of the Cyclone V E A9, C C9, and GT D9 devices. • Updated the Vertical migration table for vertical migration of the U484 packages. • Updated the Vertical migration table or vertical migration of the U484 packages for Cyclone V GX, and GT. November 2012 2012.11.19 • Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. • Updated the vertical migration table to add MBGA packages. • Added performance information for HPS memory controller. • Removed DDR3U support. • Updated Cyclone V ST speed grade information. • Added orote on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template. July 2012 2.1 <			• Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'.
 Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic to (5.144 Gbps'). Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'. Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature. December 2012 2012.12.28 Updated the GPI0 and transceiver counts for the MBGA packages. Updated the GPI0 counts for the U484 package of the Cyclone V E A9, GC9, and GT D9 devices. Updated the GPI0 counts for the U484 package of the Updated the Updated the Vertical migration table for vertical migration of the U484 packages. Updated the MLAB supported programmable widths at 32 bits depth. November 2012 2012.11.19 Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added opering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added operformance information for HPS memory controller. Removed DDR3U support. Updated the or the differences between GPI0 reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible) June 2012 Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			
'6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature.December 20122012.12.28Updated the GPIO and transceiver counts for the MBGA packages.Updated the GPIO counts for the U484 package of the Cyclone V E A9, GC 9, and GT D9 devices.Updated the vertical migration table for vertical migration of the U484 packages.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.November 20122012.11.19Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.Added ordering code for five-transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.Added onte on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added the "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.
Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature.December 20122012.12.28Updated the pin counts for the MBGA packages. Updated the GPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices. Updated the vertical migration table for vertical migration of the U484 packages. Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added performance information for HPS memory controller. Removed DDR3U support. Updated the vertical and update tables for Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPR 14 4.9152 Gbps transmit jitter compliance. Added template.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added table 1, Table 3, Table 16, Table 19, and Table 20.

packages.November 20122012.11.19• Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. • Added ordering code for five-transceiver devices for Cyclone V GT and S • Updated the vertical migration table to add MBGA packages. • Added performance information for HPS memory controller. • Removed DDR3U support. • Updated Cyclone V ST speed grade information. • Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. • Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0• Restructured the document. • Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			C9, and GT D9 devices.
November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added performance information for HPS memory controller. Removed DDR3U support. Updated Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added the "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and SUpdated the vertical migration table to add MBGA packages.Added performance information for HPS memory controller.Removed DDR3U support.Updated Cyclone V ST speed grade information.Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Updated the MLAB supported programmable widths at 32 bits depth.
 Updated the vertical migration table to add MBGA packages. Added performance information for HPS memory controller. Removed DDR3U support. Updated Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) June 2012 Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 	November 2012	2012.11.19	 Added new MBGA packages and additional U484 packages for Cyclone V E, GX, and GT.
 Added performance information for HPS memory controller. Removed DDR3U support. Updated Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) June 2012 Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			• Added ordering code for five-transceiver devices for Cyclone V GT and ST.
 Removed DDR3U support. Updated Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) June 2012 Restructured the document. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			 Updated the vertical migration table to add MBGA packages.
• Updated Cyclone V ST speed grade information.• Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.• Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template.July 20122.1June 20122.0• Restructured the document. 			Added performance information for HPS memory controller.
 Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. Updated template. July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) Intersection and the difference. Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 			
PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
User I/O numbers shown in the Quartus II software.Updated template.July 20122.1Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.
July 2012 2.1 Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible) June 2012 2.0 • Restructured the document. • Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
June 2012 2.0 • Restructured the document. • Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			•
 Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20. 	July 2012	2.1	Added support for PCIe Gen2 x4 lane configuration (PCIe-compatible)
Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.	June 2012	2.0	
• Added Table 1, Table 3, Table 16, Table 19, and Table 20.			
 Updated Table 2, Table 4, Table 5, Table 6, Table 7, Table 8, Table 9, Table 10, Table 11, Table 12, Table 13, Table 14, Table 17, and Table 18. 			• Updated Table 2, Table 4, Table 5, Table 6, Table 7, Table 8, Table 9, Table

Cyclone V Device Overview CV-51001 | 2018.05.07

Date	Version	Changes
		 Updated Figure 1, Figure 2, Figure 3, Figure 4, Figure 5, Figure 6, and Figure 10. Updated the "FPGA Configuration and Processor Booting" and "Hardware and Software Development" sections. Text edits throughout the document.
February 2012	1.2	 Updated Table 1–2, Table 1–3, and Table 1–6. Updated "Cyclone V Family Plan" on page 1–4 and "Clock Networks and PLL Clock Sources" on page 1–15. Updated Figure 1–1 and Figure 1–6.
November 2011	1.1	 Updated Table 1–1, Table 1–2, Table 1–3, Table 1–4, Table 1–5, and Table 1–6. Updated Figure 1–4, Figure 1–5, Figure 1–6, Figure 1–7, and Figure 1–8. Updated "System Peripherals" on page 1–18, "HPS-FPGA AXI Bridges" on page 1–19, "HPS SDRAM Controller Subsystem" on page 1–19, "FPGA Configuration and Processor Booting" on page 1–19, and "Hardware and Software Development" on page 1–20. Minor text edits.
October 2011	1.0	Initial release.
