Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Details

Product Status	Active
Number of LABs/CLBs	18480
Number of Logic Elements/Cells	49000
Total RAM Bits	3464192
Number of I/O	223
Number of Gates	-
Voltage - Supply	1.07V ~ 1.13V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	383-TFBGA

Cyclone V Device Overview

The Cyclone® V devices are designed to simultaneously accommodate the shrinking power consumption, cost, and time-to-market requirements; and the increasing bandwidth requirements for high-volume and cost-sensitive applications.

Enhanced with integrated transceivers and hard memory controllers, the Cyclone V devices are suitable for applications in the industrial, wireless and wireline, military, and automotive markets.

Key Advantages of Cyclone V Devices

Table 1. Key Advantages of the Cyclone V Device Family

Advantage	Supporting Feature
Lower power consumption	- Built on TSMC's 28 nm low-power (28LP) process technology and includes an abundance of hard intellectual property (IP) blocks - Up to 40% lower power consumption than the previous generation device
Improved logic integration and differentiation capabilities	8-input adaptive logic module (ALM) - Up to 13.59 megabits (Mb) of embedded memory - Variable-precision digital signal processing (DSP) blocks
Increased bandwidth capacity	3.125 gigabits per second (Gbps) and 6.144 Gbps transceivers - Hard memory controllers
Hard processor system (HPS) with integrated Arm* Cortex*-A9 MPCore* processor	- Tight integration of a dual-core Arm Cortex-A9 MPCore processor, hard IP, and an FPGA in a single Cyclone V system-on-a-chip (SoC) - Supports over 128 Gbps peak bandwidth with integrated data coherency between the processor and the FPGA fabric
Lowest system cost	- Requires only two core voltages to operate - Available in low-cost wirebond packaging - Includes innovative features such as Configuration via Protocol (CvP) and partial reconfiguration

Summary of Cyclone V Features

Table 2. Summary of Features for Cyclone V Devices

Feature	Description	
Technology	- TSMC's 28-nm low-power (28LP) process technology 1.1 V core voltage	
Packaging	- Wirebond low-halogen packages - Multiple device densities with compatible package footprints for seamless migration between different device densities - RoHS-compliant and leaded⁽¹⁾ options	
High-performance FPGA fabric	Enhanced 8-input ALM with four registers	
Internal memory blocks	- M10K—10-kilobits (Kb) memory blocks with soft error correction code (ECC) - Memory logic array block (MLAB)—640-bit distributed LUTRAM where you can use up to 25% of the ALMs as MLAB memory	
Embedded Hard IP blocks	Variable-precision DSP	- Native support for up to three signal processing precision levels (three 9 x 9, two 18 x 18, or one 27 x 27 multiplier) in the same variable-precision DSP block 64-bit accumulator and cascade - Embedded internal coefficient memory - Padder/subtractor for improved efficiency
	Memory controller	DDR3, DDR2, and LPDDR2 with 16 and 32 bit ECC support
	Embedded transceiver I/O	PCI Express* (PCIe*) Gen2 and Gen1 (x1, x2, or x4) hard IP with multifunction support, endpoint, and root port
Clock networks	- Up to 550 MHz global clock network - Global, quadrant, and peripheral clock networks - Clock networks that are not used can be powered down to reduce dynamic power	
Phase-locked loops (PLLs)	- Precision clock synthesis, clock delay compensation, and zero delay buffering (ZDB) - Integer mode and fractional mode	
FPGA General-purpose I/Os (GPIOs)	875 megabits per second (Mbps) LVDS receiver and 840 Mbps LVDS transmitter 400 MHz/800 Mbps external memory interface - On-chip termination (OCT) 3.3 V support with up to 16 mA drive strength	
Low-power high-speed serial interface	614 Mbps to 6.144 Gbps integrated transceiver speed - Transmit pre-emphasis and receiver equalization - Dynamic partial reconfiguration of individual channels	
HPS (Cyclone V SE, SX, and ST devices only)	- Single or dual-core Arm Cortex-A9 MPCore processor-up to 925 MHz maximum frequency with support for symmetric and asymmetric multiprocessing - Interface peripherals—10/100/1000 Ethernet media access control (EMAC), USB 2.0 On-The-Go (OTG) controller, quad serial peripheral interface (QSPI) flash controller, NAND flash controller, Secure Digital/MultiMediaCard (SD/MMC) controller, UART, controller area network (CAN), serial peripheral interface (SPI), I²C interface, and up to 85 HPS GPIO interfaces - System peripherals—general-purpose timers, watchdog timers, direct memory access (DMA) controller, FPGA configuration manager, and clock and reset managers - On-chip RAM and boot ROM

⁽¹⁾ Contact Intel for availability.

Feature	Description
	- HPS-FPGA bridges—include the FPGA-to-HPS, HPS-to-FPGA, and lightweight HPS-to-FPGA bridges that allow the FPGA fabric to issue transactions to slaves in the HPS, and vice versa - FPGA-to-HPS SDRAM controller subsystem—provides a configurable interface to the multiport front end (MPFE) of the HPS SDRAM controller - Arm CoreSight™ JTAG debug access port, trace port, and on-chip trace storage
Configuration	- Tamper protection—comprehensive design protection to protect your valuable IP investments - Enhanced advanced encryption standard (AES) design security features - CvP - Dynamic reconfiguration of the FPGA - Active serial (AS) x1 and x4, passive serial (PS), JTAG, and fast passive parallel (FPP) x8 and x16 configuration options - Internal scrubbing ⁽²⁾ - Partial reconfiguration ⁽³⁾

Cyclone V Device Variants and Packages

Table 3. Device Variants for the Cyclone V Device Family

Variant	Description
Cyclone V E	Optimized for the lowest system cost and power requirement for a wide spectrum of general logic and DSP applications
Cyclone V GX	Optimized for the lowest cost and power requirement for 614 Mbps to 3.125 Gbps transceiver applications
Cyclone V GT	The FPGA industry's lowest cost and lowest power requirement for 6.144 Gbps transceiver applications
Cyclone V SE	SoC with integrated Arm-based HPS
Cyclone V SX	SoC with integrated Arm-based HPS and 3.125 Gbps transceivers
Cyclone V ST	SoC with integrated Arm-based HPS and 6.144 Gbps transceivers

Cyclone V E

Embedded Memory Blocks

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

Types of Embedded Memory

The Cyclone V devices contain two types of memory blocks:

- 10 Kb M10K blocks—blocks of dedicated memory resources. The M10K blocks are ideal for larger memory arrays while still providing a large number of independent ports.
- 640 bit memory logic array blocks (MLABs)—enhanced memory blocks that are configured from dual-purpose logic array blocks (LABs). The MLABs are ideal for wide and shallow memory arrays. The MLABs are optimized for implementation of shift registers for digital signal processing (DSP) applications, wide shallow FIFO buffers, and filter delay lines. Each MLAB is made up of ten adaptive logic modules (ALMs). In the Cyclone V devices, you can configure these ALMs as ten 32 x 2 blocks, giving you one 32 x 20 simple dual-port SRAM block per MLAB.

Embedded Memory Capacity in Cyclone V Devices

Table 18. Embedded Memory Capacity and Distribution in Cyclone V Devices

Variant	Member Code	M10K		MLAB		Total RAM Bit (Kb)
		Block	RAM Bit (Kb)	Block	RAM Bit (Kb)	
Cyclone V E	A2	176	1,760	314	196	1,956
	A4	308	3,080	485	303	3,383
	A5	446	4,460	679	424	4,884
	A7	686	6,860	1338	836	7,696
	A9	1,220	12,200	2748	1,717	13,917
Cyclone V GX	C3	135	1,350	291	182	1,532
	C4	250	2,500	678	424	2,924
	C5	446	4,460	678	424	4,884
	C7	686	6,860	1338	836	7,696
	C9	1,220	12,200	2748	1,717	13,917
continued...						

PCIe Gen1 and Gen2 Hard IP

Cyclone V GX, GT, SX, and ST devices contain PCIe hard IP that is designed for performance and ease-of-use. The PCIe hard IP consists of the MAC, data link, and transaction layers.

The PCIe hard IP supports PCIe Gen2 and Gen1 end point and root port for up to x4 lane configuration. The PCIe Gen2 x4 support is PCIe-compatible.

The PCIe endpoint support includes multifunction support for up to eight functions, as shown in the following figure. The integrated multifunction support reduces the FPGA logic requirements by up to 20,000 LEs for PCIe designs that require multiple peripherals.

Figure 9. PCIe Multifunction for Cyclone V Devices

The Cyclone V PCIe hard IP operates independently from the core logic. This independent operation allows the PCIe link to wake up and complete link training in less than 100 ms while the Cyclone V device completes loading the programming file for the rest of the device.

In addition, the PCIe hard IP in the Cyclone V device provides improved end-to-end datapath protection using ECC.

External Memory Interface

This section provides an overview of the external memory interface in Cyclone V devices.

Hard and Soft Memory Controllers

Cyclone V devices support up to two hard memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices. Each controller supports 8 to 32 bit components of up to 4 gigabits (Gb) in density with two chip selects and optional ECC. For the Cyclone V SoC devices, an additional hard memory controller in the HPS supports DDR3, DDR2, and LPDDR2 SDRAM devices.

All Cyclone V devices support soft memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices for maximum flexibility.

External Memory Performance

Table 20. External Memory Interface Performance in Cyclone V Devices

The maximum and minimum operating frequencies depend on the memory interface standards and the supported delay-locked loop (DLL) frequency listed in the device datasheet.

Interface	Voltage (V)	Maximum Frequency (MHz)		Minimum Frequency (MHz)
		Hard Controller	Soft Controller	
DDR3 SDRAM	1.5	400	303	303
	1.35	400	303	303
DDR2 SDRAM	1.8	400	300	167
LPDDR2 SDRAM	1.2	333	300	167

Low-Power Serial Transceivers

Cyclone V devices deliver the industry's lowest power 6.144 Gbps transceivers at an estimated 88 mW maximum power consumption per channel. Cyclone V transceivers are designed to be compliant with a wide range of protocols and data rates.

Transceiver Channels

The transceivers are positioned on the left outer edge of the device. The transceiver channels consist of the physical medium attachment (PMA), physical coding sublayer (PCS), and clock networks.

Figure 10. Device Chip Overview for Cyclone V GX and GT Devices

The figure shows a Cyclone V FPGA with transceivers. Different Cyclone V devices may have a different floorplans than the one shown here.

PMA Features

To prevent core and I/O noise from coupling into the transceivers, the PMA block is isolated from the rest of the chip—ensuring optimal signal integrity. For the transceivers, you can use the channel PLL of an unused receiver PMA as an additional transmit PLL.

Table 22. PMA Features of the Transceivers in Cyclone V Devices

Features	Capability
Backplane support	Driving capability up to 6.144 Gbps
PLL-based clock recovery	Superior jitter tolerance
Programmable deserialization and word alignment	Flexible deserialization width and configurable word alignment pattern
Equalization and pre-emphasis	- Up to 14.37 dB of pre-emphasis and up to 4.7 dB of equalization - No decision feedback equalizer (DFE)
Ring oscillator transmit PLLs	614 Mbps to 6.144 Gbps
Input reference clock range	20 MHz to 400 MHz
Transceiver dynamic reconfiguration	Allows the reconfiguration of a single channel without affecting the operation of other channels

PCS Features

The Cyclone V core logic connects to the PCS through an 8, 10, 16, 20, 32, or 40 bit interface, depending on the transceiver data rate and protocol. Cyclone V devices contain PCS hard IP to support PCIe Gen1 and Gen2, Gbps Ethernet (GbE), Serial RapidIO® (SRIO), and Common Public Radio Interface (CPRI).

Most of the standard and proprietary protocols from 614 Mbps to 6.144 Gbps are supported.

Table 23. Transceiver PCS Features for Cyclone V Devices

PCS Support	Data Rates (Gbps)	Transmitter Data Path Feature	Receiver Data Path Feature
3-Gbps and 6-Gbps Basic	0.614 to 6.144	- Phase compensation FIFO - Byte serializer 8B/10B encoder - Transmitter bit-slip	- Word aligner - Deskew FIFO - Rate-match FIFO 8B/10B decoder - Byte deserializer - Byte ordering - Receiver phase compensation FIFO
PCIe Gen1 (x1, x2, x4)	2.5 and 5.0	- Dedicated PCIe PHY IP core - PIPE 2.0 interface to the core logic	- Dedicated PCIe PHY IP core - PIPE 2.0 interface to the core logic
PCIe Gen2 (x1, x2, x4) ⁽¹²⁾			
GbE	1.25	- Custom PHY IP core with preset feature - GbE transmitter synchronization state machine	- Custom PHY IP core with preset feature - GbE receiver synchronization state machine
XAUI ⁽¹³⁾	3.125	- Dedicated XAUI PHY IP core - XAUI synchronization state machine for bonding four channels	- Dedicated XAUI PHY IP core - XAUI synchronization state machine for realigning four channels
HiGig	3.75		
SRIO 1.3 and 2.1	1.25 to 3.125	- Custom PHY IP core with preset feature - SRIO version 2.1-compliant x2 and x4 channel bonding	- Custom PHY IP core with preset feature - SRIO version 2.1-compliant x2 and x4 deskew state machine
SDI, SD/HD, and 3G-SDI	0.27 ⁽¹⁴⁾ , 1.485, and 2.97	Custom PHY IP core with preset feature	Custom PHY IP core with preset feature
JESD204A	0.3125 ⁽¹⁵⁾ to 3.125		

continued...

⁽¹²⁾ PCIe Gen2 is supported for Cyclone V GT and ST devices. The PCIe Gen2 x4 support is PCIe-compatible.

⁽¹³⁾ XAUI is supported through the soft PCS.

⁽¹⁴⁾ The 0.27-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.

⁽¹⁵⁾ The 0.3125-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.

Figure 11. HPS with Dual-Core Arm Cortex-A9 MPCore Processor

System Peripherals and Debug Access Port

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals to interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports Arm CoreSight debug and core traces to facilitate software development.

Date	Version	Changes
		- Updated MLAB RAM Bit (Kb) in Embedded Memory Capacity and Distribution in Cyclone V Devices table as follows: - Cyclone V GX C3: Updated from 181 to 182 - Cyclone V GX C4: Updated from 295 to 424 - Updated Total RAM Bit (Kb) in Embedded Memory Capacity and Distribution in Cyclone V Devices table as follows: - Cyclone V GX C3: Updated from 1,531 to 1,532 - Cyclone V GX C4: Updated from 2,795 to 2,924 - Updated MLAB Block count in Embedded Memory Capacity and Distribution in Cyclone V Devices table as follows: - Cyclone V GX C4: Updated from 472 to 678 - Cyclone V GX C5: Updated from 679 to 678
March 2015	2015.03.31	- Added internal scrubbing feature under configuration in Summary of Features for Cyclone V Devices table. - Added optional suffix "SC: Internal scrubbing support" to the following diagrams: - Sample Ordering Code and Available Options for Cyclone V E Devices - Sample Ordering Code and Available Options for Cyclone V GX Devices - Sample Ordering Code and Available Options for Cyclone V SE Devices - Sample Ordering Code and Available Options for Cyclone V SX Devices
January 2015	2015.01.23	- Updated Sample Ordering Code and Available Options for Cyclone V ST Devices figure because Cyclone V ST devices are only available in I temperature grade and -7 speed grade. - Operating Temperature: Removed C and A temperature grades - FPGA Fabric Speed Grade: Removed -6 and -8 speed grades - Updated the transceiver specification for Cyclone V ST from 5 Gbps to 6.144 Gbps: - Device Variants for the Cyclone V Device Family table - Sample Ordering Code and Available Options for Cyclone V ST Devices figure - Maximum Resource Counts for Cyclone V ST Devices - Updated Maximum Resource Counts for Cyclone V GX Devices table for Cyclone V GX G3 devices. - Logic elements (LE) (K): Updated from 35.7 to 35.5 - Variable-precision DSP block: Updated from 51 to 57 18 x 18 multiplier: Updated from 102 to 114 - Updated Number of Multipliers in Cyclone V Devices table for Cyclone V GX G3 devices. - Variableprecision DSP Block: Updated from 51 to 57 9 x 9 Multiplier: Updated from 153 to 171 18 x 18 Multiplier: Updated from 102 to 114 27 x 27 Multiplier: Updated from 51 to 57 18 x 18 Multiplier Adder Mode: Updated from 51 to 57 18 x 18 Multiplier Adder Summed with 36 bit Input: Updated from 51 to 57 - Updated Embedded Memory Capacity and Distribution in Cyclone V Devices table for Cyclone V GX G3 devices. - M10K block: Updated from 119 to 135 - M10K RAM bit (Kb): Updated from 1,190 to 1,350 - MLAB block: Updated from 255 to 291 - MLAB RAM bit (Kb): Updated from 159 to 181 - Total RAM bit (Kb): Updated from 1,349 to 1,531
October 2014	2014.10.06	Added a footnote to the "Transceiver PCS Features for Cyclone V Devices" table to show that PCIe Gen2 is supported for Cyclone V GT and ST devices.
