Welcome to <u>E-XFL.COM</u>

#### Understanding <u>Embedded - FPGAs (Field</u> <u>Programmable Gate Array)</u>

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

#### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Active
Number of LABs/CLBs	29080
Number of Logic Elements/Cells	77000
Total RAM Bits	5001216
Number of I/O	129
Number of Gates	-
Voltage - Supply	1.07V ~ 1.13V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	301-TFBGA
Supplier Device Package	301-MBGA (11x11)
Purchase URL	https://www.e-xfl.com/product-detail/intel/5cgxfc5f6m11i7n

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

Feature	Description
	<ul> <li>HPS-FPGA bridges—include the FPGA-to-HPS, HPS-to-FPGA, and lightweight HPS-to-FPGA bridges that allow the FPGA fabric to issue transactions to slaves in the HPS, and vice versa</li> <li>FPGA-to-HPS SDRAM controller subsystem—provides a configurable interface to the multiport front end (MPFE) of the HPS SDRAM controller</li> <li>Arm CoreSight<sup>™</sup> JTAG debug access port, trace port, and on-chip trace storage</li> </ul>
Configuration	<ul> <li>Tamper protection—comprehensive design protection to protect your valuable IP investments</li> <li>Enhanced advanced encryption standard (AES) design security features</li> <li>CvP</li> <li>Dynamic reconfiguration of the FPGA</li> <li>Active serial (AS) x1 and x4, passive serial (PS), JTAG, and fast passive parallel (FPP) x8 and x16 configuration options</li> <li>Internal scrubbing <sup>(2)</sup></li> <li>Partial reconfiguration <sup>(3)</sup></li> </ul>

# **Cyclone V Device Variants and Packages**

## Table 3. Device Variants for the Cyclone V Device Family

Variant	Description
Cyclone V E	Optimized for the lowest system cost and power requirement for a wide spectrum of general logic and DSP applications
Cyclone V GX	Optimized for the lowest cost and power requirement for 614 Mbps to 3.125 Gbps transceiver applications
Cyclone V GT	The FPGA industry's lowest cost and lowest power requirement for 6.144 Gbps transceiver applications
Cyclone V SE	SoC with integrated Arm-based HPS
Cyclone V SX	SoC with integrated Arm-based HPS and 3.125 Gbps transceivers
Cyclone V ST	SoC with integrated Arm-based HPS and 6.144 Gbps transceivers

# Cyclone V E

This section provides the available options, maximum resource counts, and package plan for the Cyclone V E devices.

The information in this section is correct at the time of publication. For the latest information and to get more details, refer to the Product Selector Guide.

#### **Related Information**

#### Product Selector Guide

Provides the latest information about Intel products.

<sup>(2)</sup> The SEU internal scrubbing feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

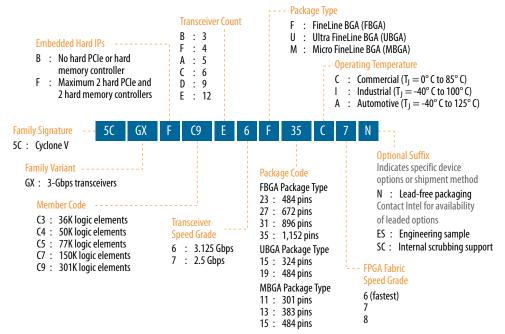

<sup>(3)</sup> The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel<sup>®</sup> sales representatives.

# **Available Options**

# **I/O Vertical Migration for Cyclone V Devices**

#### Figure 7. Vertical Migration Capability Across Cyclone V Device Packages and Densities

The arrows indicate the vertical migration paths. The devices included in each vertical migration path are shaded. You can also migrate your design across device densities in the same package option if the devices have the same dedicated pins, configuration pins, and power pins.

You can achieve the vertical migration shaded in red if you use only up to 175 GPIOs for the M383 package, and 138 GPIOs for the U672 package. These migration paths are not shown in the Intel Quartus Prime software Pin Migration View.

*Note:* To verify the pin migration compatibility, use the Pin Migration View window in the Intel Quartus Prime software Pin Planner.

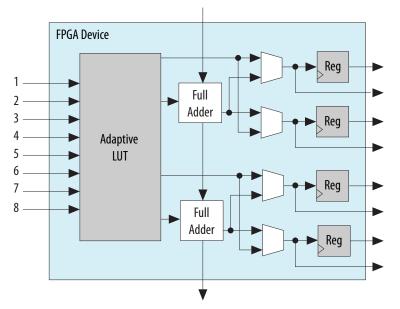

# **Adaptive Logic Module**

Cyclone V devices use a 28 nm ALM as the basic building block of the logic fabric.

The ALM, as shown in following figure, uses an 8-input fracturable look-up table (LUT) with four dedicated registers to help improve timing closure in register-rich designs and achieve an even higher design packing capability than previous generations.

#### Figure 8. ALM for Cyclone V Devices

You can configure up to 25% of the ALMs in the Cyclone V devices as distributed memory using MLABs.

#### **Related Information**

Embedded Memory Capacity in Cyclone V Devices on page 21 Lists the embedded memory capacity for each device.

# **Variable-Precision DSP Block**

Cyclone V devices feature a variable-precision DSP block that supports these features:

- Configurable to support signal processing precisions ranging from 9 x 9, 18 x 18 and 27 x 27 bits natively
- A 64-bit accumulator
- A hard preadder that is available in both 18- and 27-bit modes
- Cascaded output adders for efficient systolic finite impulse response (FIR) filters
- Internal coefficient register banks, 8 deep, for each multiplier in 18- or 27-bit mode
- Fully independent multiplier operation
- A second accumulator feedback register to accommodate complex multiplyaccumulate functions
- Fully independent Efficient support for single-precision floating point arithmetic
- The inferability of all modes by the Intel Quartus Prime design software

Variant	Code precision		Independent Input and Output Multiplications Operator			18 x 18 Multiplier	18 x 18 Multiplier
		DSP Block	9 x 9 Multiplier	18 x 18 Multiplier	27 x 27 Multiplier	Adder Mode	Adder Summed with 36 bit Input
	C6	112	336	224	112	112	112
Cyclone V ST	D5	87	261	174	87	87	87
	D6	112	336	224	112	112	112

# **Embedded Memory Blocks**

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

# **Types of Embedded Memory**

The Cyclone V devices contain two types of memory blocks:

- 10 Kb M10K blocks—blocks of dedicated memory resources. The M10K blocks are ideal for larger memory arrays while still providing a large number of independent ports.
- 640 bit memory logic array blocks (MLABs)—enhanced memory blocks that are configured from dual-purpose logic array blocks (LABs). The MLABs are ideal for wide and shallow memory arrays. The MLABs are optimized for implementation of shift registers for digital signal processing (DSP) applications, wide shallow FIFO buffers, and filter delay lines. Each MLAB is made up of ten adaptive logic modules (ALMs). In the Cyclone V devices, you can configure these ALMs as ten 32 x 2 blocks, giving you one 32 x 20 simple dual-port SRAM block per MLAB.

# **Embedded Memory Capacity in Cyclone V Devices**

## Table 18. Embedded Memory Capacity and Distribution in Cyclone V Devices

	Member	M1	.0К	ML	Total RAM Bit	
Variant	Code	Block	RAM Bit (Kb)	Block	RAM Bit (Kb)	(Kb)
Cyclone V E	A2	176	1,760	314	196	1,956
	A4	308	3,080	485	303	3,383
	A5	446	4,460	679	424	4,884
	A7	686	6,860	1338	836	7,696
	A9	1,220	12,200	2748	1,717	13,917
Cyclone V GX	C3	135	1,350	291	182	1,532

	C5	446	4,460	678	424	4,884
	C7	686	6,860	1338	836	7,696
	C9	1,220	12,200	2748	1,717	13,917
						continued

## **PLL Features**

The PLLs in the Cyclone V devices support the following features:

- Frequency synthesis
- On-chip clock deskew
- Jitter attenuation
- Programmable output clock duty cycles
- PLL cascading
- Reference clock switchover
- Programmable bandwidth
- User-mode reconfiguration of PLLs
- Low power mode for each fractional PLL
- Dynamic phase shift
- Direct, source synchronous, zero delay buffer, external feedback, and LVDS compensation modes

#### **Fractional PLL**

In addition to integer PLLs, the Cyclone V devices use a fractional PLL architecture. The devices have up to eight PLLs, each with nine output counters. You can use the output counters to reduce PLL usage in two ways:

- Reduce the number of oscillators that are required on your board by using fractional PLLs
- Reduce the number of clock pins that are used in the device by synthesizing multiple clock frequencies from a single reference clock source

If you use the fractional PLL mode, you can use the PLLs for precision fractional-N frequency synthesis—removing the need for off-chip reference clock sources in your design.

The transceiver fractional PLLs that are not used by the transceiver I/Os can be used as general purpose fractional PLLs by the FPGA fabric.

# **FPGA General Purpose I/O**

Cyclone V devices offer highly configurable GPIOs. The following list describes the features of the GPIOs:

- Programmable bus hold and weak pull-up
- LVDS output buffer with programmable differential output voltage (V\_{\text{OD}}) and programmable pre-emphasis
- On-chip parallel termination ( $R_T$  OCT) for all I/O banks with OCT calibration to limit the termination impedance variation
- On-chip dynamic termination that has the ability to swap between series and parallel termination, depending on whether there is read or write on a common bus for signal integrity
- Easy timing closure support using the hard read FIFO in the input register path, and delay-locked loop (DLL) delay chain with fine and coarse architecture

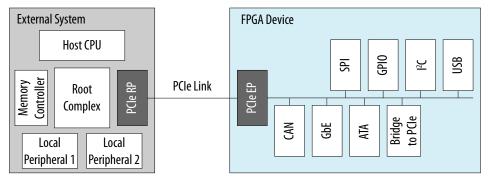

# PCIe Gen1 and Gen2 Hard IP

Cyclone V GX, GT, SX, and ST devices contain PCIe hard IP that is designed for performance and ease-of-use. The PCIe hard IP consists of the MAC, data link, and transaction layers.

The PCIe hard IP supports PCIe Gen2 and Gen1 end point and root port for up to x4 lane configuration. The PCIe Gen2 x4 support is PCIe-compatible.

The PCIe endpoint support includes multifunction support for up to eight functions, as shown in the following figure. The integrated multifunction support reduces the FPGA logic requirements by up to 20,000 LEs for PCIe designs that require multiple peripherals.

#### Figure 9. PCIe Multifunction for Cyclone V Devices

The Cyclone V PCIe hard IP operates independently from the core logic. This independent operation allows the PCIe link to wake up and complete link training in less than 100 ms while the Cyclone V device completes loading the programming file for the rest of the device.

In addition, the PCIe hard IP in the Cyclone V device provides improved end-to-end datapath protection using ECC.

# **External Memory Interface**

This section provides an overview of the external memory interface in Cyclone V devices.

## Hard and Soft Memory Controllers

Cyclone V devices support up to two hard memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices. Each controller supports 8 to 32 bit components of up to 4 gigabits (Gb) in density with two chip selects and optional ECC. For the Cyclone V SoC devices, an additional hard memory controller in the HPS supports DDR3, DDR2, and LPDDR2 SDRAM devices.

All Cyclone V devices support soft memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices for maximum flexibility.

# **External Memory Performance**

#### Table 20. External Memory Interface Performance in Cyclone V Devices

The maximum and minimum operating frequencies depend on the memory interface standards and the supported delay-locked loop (DLL) frequency listed in the device datasheet.

Interface	Voltage	Maximum Free	Minimum Frequency	
	(V)	Hard Controller	Soft Controller	(MHz)
DDR3 SDRAM	1.5	400	303	303
	1.35	400	303	303
DDR2 SDRAM	1.8	400	300	167
LPDDR2 SDRAM	1.2	333	300	167

# **Low-Power Serial Transceivers**

Cyclone V devices deliver the industry's lowest power 6.144 Gbps transceivers at an estimated 88 mW maximum power consumption per channel. Cyclone V transceivers are designed to be compliant with a wide range of protocols and data rates.

# **Transceiver Channels**

The transceivers are positioned on the left outer edge of the device. The transceiver channels consist of the physical medium attachment (PMA), physical coding sublayer (PCS), and clock networks.

# **PCS Features**

The Cyclone V core logic connects to the PCS through an 8, 10, 16, 20, 32, or 40 bit interface, depending on the transceiver data rate and protocol. Cyclone V devices contain PCS hard IP to support PCIe Gen1 and Gen2, Gbps Ethernet (GbE), Serial RapidIO<sup>®</sup> (SRIO), and Common Public Radio Interface (CPRI).

Most of the standard and proprietary protocols from 614 Mbps to 6.144 Gbps are supported.

Table 23.	<b>Transceiver PCS</b>	Features for C	vclone V Devices
		i cutui co i ci c	

PCS Support	Data Rates (Gbps)	Transmitter Data Path Feature	Receiver Data Path Feature
3-Gbps and 6-Gbps Basic	0.614 to 6.144	<ul> <li>Phase compensation FIFO</li> <li>Byte serializer</li> <li>8B/10B encoder</li> <li>Transmitter bit-slip</li> </ul>	<ul> <li>Word aligner</li> <li>Deskew FIFO</li> <li>Rate-match FIFO</li> <li>8B/10B decoder</li> <li>Byte deserializer</li> <li>Byte ordering</li> <li>Receiver phase compensation FIFO</li> </ul>

DisplayPort 1.2 <sup>(17)</sup>	1.62 and 2.7		Wider spread of asynchronous     SSC

# **SoC with HPS**

Each SoC combines an FPGA fabric and an HPS in a single device. This combination delivers the flexibility of programmable logic with the power and cost savings of hard IP in these ways:

- Reduces board space, system power, and bill of materials cost by eliminating a discrete embedded processor
- Allows you to differentiate the end product in both hardware and software, and to support virtually any interface standard
- Extends the product life and revenue through in-field hardware and software updates

# **HPS Features**

The HPS consists of a dual-core Arm Cortex-A9 MPCore processor, a rich set of peripherals, and a shared multiport SDRAM memory controller, as shown in the following figure.

<sup>&</sup>lt;sup>(16)</sup> High-voltage output mode (1000-BASE-CX) is not supported.

<sup>&</sup>lt;sup>(17)</sup> Pending characterization.

*Note:* Although the FPGA fabric and HPS are on separate power domains, the HPS must remain powered up during operation while the FPGA fabric can be powered up or down as required.

#### **Related Information**

Cyclone V Device Family Pin Connection Guidelines

Provides detailed information about power supply pin connection guidelines and power regulator sharing.

## **Hardware and Software Development**

For hardware development, you can configure the HPS and connect your soft logic in the FPGA fabric to the HPS interfaces using the Platform Designer (Standard) system integration tool in the Intel Quartus Prime software.

For software development, the Arm-based SoC devices inherit the rich software development ecosystem available for the Arm Cortex-A9 MPCore processor. The software development process for Intel SoCs follows the same steps as those for other SoC devices from other manufacturers. Support for Linux, VxWorks<sup>®</sup>, and other operating systems is available for the SoCs. For more information on the operating systems support availability, contact the Intel sales team.

You can begin device-specific firmware and software development on the Intel SoC Virtual Target. The Virtual Target is a fast PC-based functional simulation of a target development system—a model of a complete development board that runs on a PC. The Virtual Target enables the development of device-specific production software that can run unmodified on actual hardware.

# **Dynamic and Partial Reconfiguration**

The Cyclone V devices support dynamic reconfiguration and partial reconfiguration.

## **Dynamic Reconfiguration**

The dynamic reconfiguration feature allows you to dynamically change the transceiver data rates, PMA settings, or protocols of a channel, without affecting data transfer on adjacent channels. This feature is ideal for applications that require on-the-fly multiprotocol or multirate support. You can reconfigure the PMA and PCS blocks with dynamic reconfiguration.

## **Partial Reconfiguration**

*Note:* The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

Partial reconfiguration allows you to reconfigure part of the device while other sections of the device remain operational. This capability is important in systems with critical uptime requirements because it allows you to make updates or adjust functionality without disrupting services.

Apart from lowering cost and power consumption, partial reconfiguration increases the effective logic density of the device because placing device functions that do not operate simultaneously is not necessary. Instead, you can store these functions in external memory and load them whenever the functions are required. This capability reduces the size of the device because it allows multiple applications on a single device—saving the board space and reducing the power consumption.

Intel simplifies the time-intensive task of partial reconfiguration by building this capability on top of the proven incremental compile and design flow in the Intel Quartus Prime design software. With the Intel solution, you do not need to know all the intricate device architecture details to perform a partial reconfiguration.

Partial reconfiguration is supported through the FPP x16 configuration interface. You can seamlessly use partial reconfiguration in tandem with dynamic reconfiguration to enable simultaneous partial reconfiguration of both the device core and transceivers.

# **Enhanced Configuration and Configuration via Protocol**

Cyclone V devices support 1.8 V, 2.5 V, 3.0 V, and 3.3 V programming voltages and several configuration schemes.

Mode	Data Width	Max Clock Rate (MHz)	Max Data Rate (Mbps)	Decompressi on	Design Security	Partial Reconfigurat ion <sup>(18)</sup>	Remote System Update
AS through the EPCS and EPCQ serial configuration device	1 bit, 4 bits	100	_	Yes	Yes	_	Yes
PS through CPLD or external microcontroller	1 bit	125	125	Yes	Yes	_	_
FPP	8 bits	125	_	Yes	Yes	_	Parallel flash
	16 bits	125	_	Yes	Yes	Yes	loader
CvP (PCIe)	x1, x2, and x4 lanes	-	_	Yes	Yes	Yes	_
JTAG	1 bit	33	33	-	_	_	_

 Table 24.
 Configuration Schemes and Features Supported by Cyclone V Devices

Instead of using an external flash or ROM, you can configure the Cyclone V devices through PCIe using CvP. The CvP mode offers the fastest configuration rate and flexibility with the easy-to-use PCIe hard IP block interface. The Cyclone V CvP implementation conforms to the PCIe 100 ms power-up-to-active time requirement.

## **Related Information**

Configuration via Protocol (CvP) Implementation in Intel FPGAs User Guide Provides more information about CvP.

<sup>&</sup>lt;sup>(18)</sup> The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

Contact Alter for support of the feature.December 20122012.12.28•Updated the GPIO counts for the MBGA packages.•Updated the GPIO counts for the U484 package of the Cyclone V E A9, CC (C9, and GT D9 devices.•Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19•Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.•Updated Cyclone V ST speed grade information.•Added ordering code for five-transceiver devices for Cyclone V GT and S · Updated the vertical migration and information.•Added ordering code for five-transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.•Added order ing code for five-transceiver devices for Cyclone V GT and S · Updated the vertical migration on maximum transceiver controller.•Removed			Updated Embedded Memory Capacity and Distribution table for Cyclone V SE A4 and A6, SX C4 and C6, ST D6 devices.
6.144 Gbps.         Removed 'Distributed Memory' symbol.         Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'.         Updated the Capability in Table 23 from 5 Gbps to '6 Gbps'.         Updated the PCS Support in Table 23 of 3 Gbps and 6 Gbps Basic to '6.144 Gbps'.         Updated the Data Rates (Gbps) in Table 23 of 2 GPRI 4.1 to '6.144 Gbps'.         Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.         Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.         Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.         Clarified that partial reconfiguration is an advanced feature. Contact Alte for support of the feature.         December 2012         2012.12.28         Updated the GPIO and transceiver counts for the MBGA packages.         Updated the GPIO and transceiver counts for the U484 package of the Cyclone V E A9, C C, and GT D9 devices.         Updated the MLB supported programmable widths at 32 bits depth.         November 2012       2012.11.19         Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.         Added ordering code for five-transceiver devices for Cyclone V GT and S         Updated the vertical migration table to add MBGA packages.         Added ordering code for five-transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.         Added ordering code for five-transceiver			Removed 'Counter reconfiguration' from the PLL Features.
•Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'.•Updated Capability in Table 22 of Ring oscillator transmit PLLs with 6.144 Gbps.•Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.•Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic to '6.144 Gbps'.•Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.•Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.•Clarified that partial reconfiguration is an advanced feature. Contact Alte for support of the feature.December 20122012.12.28Updated the GPIO counts for the MBGA packages. 			
Updated Capability in Table 22 of Ring oscillator transmit PLLs with 6.144 Gbps.Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.Updated the PCS Support in Table 23 of 3 Gbps and 6 Gbps Basic t '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.December 20122012.12.28Updated the pin counts for the MBGA packages.Updated the GPIO and transceiver counts for the MBGA packages.Updated the CPI Counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices.Updated the CPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices.Vupdated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.Added performance information for HPS memory controller.Removed DDR3U support.Updated Cryclone V ST speed grade information.Added information on maximum transceiver channel usage restrictions fo PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document.Added the "Embedded Memory Capacity" and "Embedded Memory Configurations" sections.Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Removed 'Distributed Memory' symbol.
6.144 Gbps.         • Updated the DCS Support in Table 23 from 5 Gbps to '6 Gbps'.         • Updated the Data Rates (Gbps) in Table 23 of 3 Gbps and 6 Gbps Basic t         '6.144 Gbps'.         • Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.         • Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.         • Updated the partial reconfiguration is an advanced feature. Contact Alter for support of the feature.         December 2012       2012.12.28         • Updated the GPIO and transceiver counts for the MBGA packages.         • Updated the Vertical migration table for vertical migration of the U484 package of the Cyclone V E A9, C C9, and GT D9 devices.         • Updated the Vertical migration table for vertical migration of the U484 packages.         • Updated the Vertical migration table or vertical migration of the U484 packages for Cyclone V GX, and GT.         November 2012       2012.11.19         • Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.         • Updated the vertical migration table to add MBGA packages.         • Added performance information for HPS memory controller.         • Removed DDR3U support.         • Updated Cyclone V ST speed grade information.         • Added orote on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.         • Updated template.         July 2012       2.1     <			• Updated the Capability in Table 22 of Backplane support to '6.144 Gbps'.
