Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Active
Number of LABs/CLBs	56480
Number of Logic Elements/Cells	149500
Total RAM Bits	7880704
Number of I/O	240
Number of Gates	-
Voltage - Supply	1.07V ~ 1.13V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	484-BGA
Supplier Device Package	484-FBGA (23x23)
Purchase URL	https://www.e-xfl.com/product-detail/intel/5cgxfc7c6f23i7n

Summary of Cyclone V Features

Table 2. Summary of Features for Cyclone V Devices

Feature	Description	
Technology	• TSMC's 28-nm low-power (28LP) process technology • 1.1 V core voltage	
Packaging	• Wirebond low-halogen packages • Multiple device densities with compatible package footprints for seamless migration between different device densities • RoHS-compliant and leaded(1) options	
High-performance FPGA fabric	Enhanced 8-input ALM with four registers	
Internal memory blocks	• M10K—10-kilobits (Kb) memory blocks with soft error correction code (ECC) • Memory logic array block (MLAB)—640-bit distributed LUTRAM where you can use up to 25% of the ALMs as MLAB memory	
Embedded Hard IP blocks	Variable-precision DSP	• Native support for up to three signal processing precision levels (three 9 x 9, two 18 x 18, or one 27 x 27 multiplier) in the same variable-precision DSP block • 64-bit accumulator and cascade • Embedded internal coefficient memory • Preadder/subtractor for improved efficiency
	Memory controller	DDR3, DDR2, and LPDDR2 with 16 and 32 bit ECC support
	Embedded transceiver I/O	PCI Express* (PCIe*) Gen2 and Gen1 (x1, x2, or x4) hard IP with multifunction support, endpoint, and root port
Clock networks	• Up to 550 MHz global clock network • Global, quadrant, and peripheral clock networks • Clock networks that are not used can be powered down to reduce dynamic power	
Phase-locked loops (PLLs)	• Precision clock synthesis, clock delay compensation, and zero delay buffering (ZDB) • Integer mode and fractional mode	
FPGA General-purpose I/Os (GPIOs)	• 875 megabits per second (Mbps) LVDS receiver and 840 Mbps LVDS transmitter • 400 MHz/800 Mbps external memory interface • On-chip termination (OCT) • 3.3 V support with up to 16 mA drive strength	
Low-power high-speed serial interface	• 614 Mbps to 6.144 Gbps integrated transceiver speed • Transmit pre-emphasis and receiver equalization • Dynamic partial reconfiguration of individual channels	
HPS (Cyclone V SE, SX, and ST devices only)	• Single or dual-core Arm Cortex-A9 MPCore processor-up to 925 MHz maximum frequency with support for symmetric and asymmetric multiprocessing • Interface peripherals—10/100/1000 Ethernet media access control (EMAC), USB 2.0 On-The-GO (OTG) controller, quad serial peripheral interface (QSPI) flash controller, NAND flash controller, Secure Digital/MultiMediaCard (SD/MMC) controller, UART, controller area network (CAN), serial peripheral interface (SPI), I^2C interface, and up to 85 HPS GPIO interfaces • System peripherals—general-purpose timers, watchdog timers, direct memory access (DMA) controller, FPGA configuration manager, and clock and reset managers • On-chip RAM and boot ROM

(1) Contact Intel for availability.

Feature	Description
	• HPS–FPGA bridges—include the FPGA-to-HPS, HPS-to-FPGA, and lightweight HPS-to-FPGA bridges that allow the FPGA fabric to issue transactions to slaves in the HPS, and vice versa • FPGA-to-HPS SDRAM controller subsystem—provides a configurable interface to the multiport front end (MPFE) of the HPS SDRAM controller • Arm CoreSight™ JTAG debug access port, trace port, and on-chip trace storage
Configuration	• Tamper protection—comprehensive design protection to protect your valuable IP investments • Enhanced advanced encryption standard (AES) design security features • CvP • Dynamic reconfiguration of the FPGA • Active serial (AS) x1 and x4, passive serial (PS), JTAG, and fast passive parallel (FPP) x8 and x16 configuration options • Internal scrubbing (2) • Partial reconfiguration (3)

Cyclone V Device Variants and Packages

Table 3. Device Variants for the Cyclone V Device Family

Variant	Description
Cyclone V E	Optimized for the lowest system cost and power requirement for a wide spectrum of general logic and DSP applications
Cyclone V GX	Optimized for the lowest cost and power requirement for 614 Mbps to 3.125 Gbps transceiver applications
Cyclone V GT	The FPGA industry's lowest cost and lowest power requirement for 6.144 Gbps transceiver applications
Cyclone V SE	SoC with integrated Arm-based HPS
Cyclone V SX	SoC with integrated Arm-based HPS and 3.125 Gbps transceivers
Cyclone V ST	SoC with integrated Arm-based HPS and 6.144 Gbps transceivers

Cyclone V E

This section provides the available options, maximum resource counts, and package plan for the Cyclone V E devices.

Package Plan

Table 15. Package Plan for Cyclone V ST Devices

- The HPS I/O counts are the number of I/Os in the HPS and does not correlate with the number of HPS-specific I/O pins in the FPGA. Each HPS-specific pin in the FPGA may be mapped to several HPS I/Os.
- Transceiver counts shown are for transceiver ≤5 Gbps . 6 Gbps transceiver channel count support depends on the package and channel usage. For more information about the 6 Gbps transceiver channel count, refer to the *Cyclone V Device Handbook Volume 2: Transceivers*.

Member Code	F896 (31 mm)		
	FPGA GPIO	HPS I/O	XCVR
D5	288	181	9 (11)
D6	288	181	9 (11)

Related Information

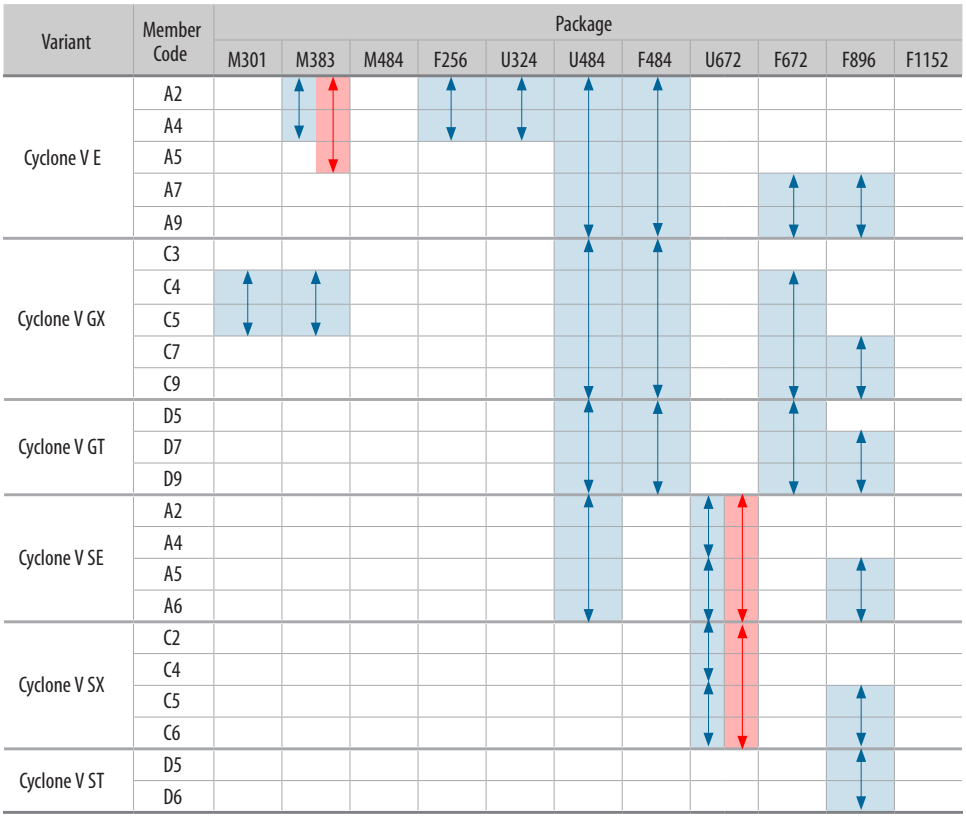
6.144-Gbps Support Capability in Cyclone V GT Devices, Cyclone V Device Handbook Volume 2: Transceivers
Provides more information about 6 Gbps transceiver channel count.

(11) If you require CPRI (at 4.9152 Gbps) and PCIe Gen2 transmit jitter compliance, Intel recommends that you use only up to seven full-duplex transceiver channels for CPRI, and up to six full-duplex channels for PCIe Gen2. The CMU channels are not considered full-duplex channels.

I/O Vertical Migration for Cyclone V Devices

Figure 7. Vertical Migration Capability Across Cyclone V Device Packages and Densities

The arrows indicate the vertical migration paths. The devices included in each vertical migration path are shaded. You can also migrate your design across device densities in the same package option if the devices have the same dedicated pins, configuration pins, and power pins.



You can achieve the vertical migration shaded in red if you use only up to 175 GPIOs for the M383 package, and 138 GPIOs for the U672 package. These migration paths are not shown in the Intel Quartus Prime software Pin Migration View.

Note: To verify the pin migration compatibility, use the Pin Migration View window in the Intel Quartus Prime software Pin Planner.

Adaptive Logic Module

Cyclone V devices use a 28 nm ALM as the basic building block of the logic fabric.

The ALM, as shown in following figure, uses an 8-input fracturable look-up table (LUT) with four dedicated registers to help improve timing closure in register-rich designs and achieve an even higher design packing capability than previous generations.

Variant	Member Code	M10K		MLAB		Total RAM Bit (Kb)
		Block	RAM Bit (Kb)	Block	RAM Bit (Kb)	
Cyclone V GT	D5	446	4,460	679	424	4,884
	D7	686	6,860	1338	836	7,696
	D9	1,220	12,200	2748	1,717	13,917
Cyclone V SE	A2	140	1,400	221	138	1,538
	A4	270	2,700	370	231	2,460
	A5	397	3,970	768	480	4,450
	A6	553	5,530	994	621	6,151
Cyclone V SX	C2	140	1,400	221	138	1,538
	C4	270	2,700	370	231	2,460
	C5	397	3,970	768	480	4,450
	C6	553	5,530	994	621	6,151
Cyclone V ST	D5	397	3,970	768	480	4,450
	D6	553	5,530	994	621	6,151

Embedded Memory Configurations

Table 19. Supported Embedded Memory Block Configurations for Cyclone V Devices

This table lists the maximum configurations supported for the embedded memory blocks. The information is applicable only to the single-port RAM and ROM modes.

Memory Block	Depth (bits)	Programmable Width
MLAB	32	x16, x18, or x20
M10K	256	x40 or x32
	512	x20 or x16
	1K	x10 or x8
	2K	x5 or x4
	4K	x2
	8K	x1

Clock Networks and PLL Clock Sources

550 MHz Cyclone V devices have 16 global clock networks capable of up to operation. The clock network architecture is based on Intel's global, quadrant, and peripheral clock structure. This clock structure is supported by dedicated clock input pins and fractional PLLs.

Note: To reduce power consumption, the Intel Quartus Prime software identifies all unused sections of the clock network and powers them down.

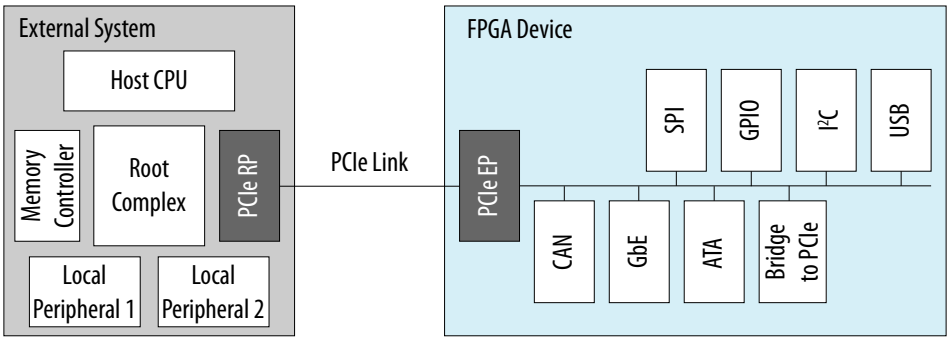
PCIe Gen1 and Gen2 Hard IP

Cyclone V GX, GT, SX, and ST devices contain PCIe hard IP that is designed for performance and ease-of-use. The PCIe hard IP consists of the MAC, data link, and transaction layers.

The PCIe hard IP supports PCIe Gen2 and Gen1 end point and root port for up to x4 lane configuration. The PCIe Gen2 x4 support is PCIe-compatible.

The PCIe endpoint support includes multifunction support for up to eight functions, as shown in the following figure. The integrated multifunction support reduces the FPGA logic requirements by up to 20,000 LEs for PCIe designs that require multiple peripherals.

Figure 9. PCIe Multifunction for Cyclone V Devices



The Cyclone V PCIe hard IP operates independently from the core logic. This independent operation allows the PCIe link to wake up and complete link training in less than 100 ms while the Cyclone V device completes loading the programming file for the rest of the device.

In addition, the PCIe hard IP in the Cyclone V device provides improved end-to-end datapath protection using ECC.

External Memory Interface

This section provides an overview of the external memory interface in Cyclone V devices.

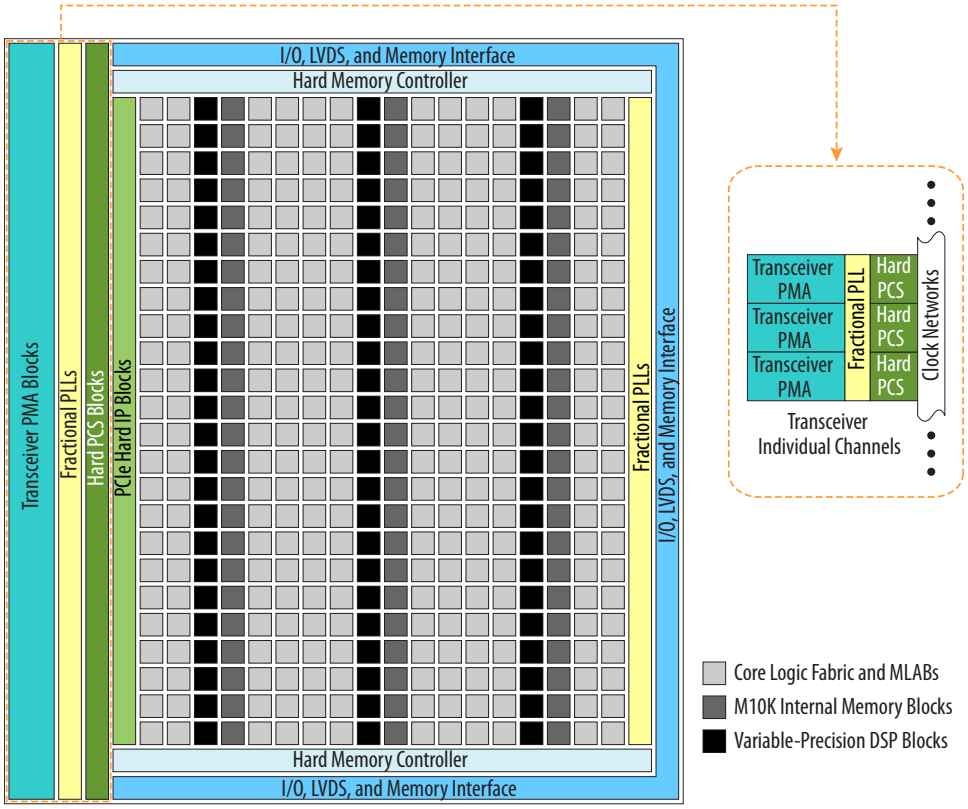
Hard and Soft Memory Controllers

Cyclone V devices support up to two hard memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices. Each controller supports 8 to 32 bit components of up to 4 gigabits (Gb) in density with two chip selects and optional ECC. For the Cyclone V SoC devices, an additional hard memory controller in the HPS supports DDR3, DDR2, and LPDDR2 SDRAM devices.

All Cyclone V devices support soft memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices for maximum flexibility.

Figure 10. Device Chip Overview for Cyclone V GX and GT Devices

The figure shows a Cyclone V FPGA with transceivers. Different Cyclone V devices may have a different floorplans than the one shown here.



PMA Features

To prevent core and I/O noise from coupling into the transceivers, the PMA block is isolated from the rest of the chip—ensuring optimal signal integrity. For the transceivers, you can use the channel PLL of an unused receiver PMA as an additional transmit PLL.

Table 22. PMA Features of the Transceivers in Cyclone V Devices

Features	Capability
Backplane support	Driving capability up to 6.144 Gbps
PLL-based clock recovery	Superior jitter tolerance
Programmable deserialization and word alignment	Flexible deserialization width and configurable word alignment pattern
Equalization and pre-emphasis	• Up to 14.37 dB of pre-emphasis and up to 4.7 dB of equalization • No decision feedback equalizer (DFE)
Ring oscillator transmit PLLs	614 Mbps to 6.144 Gbps
Input reference clock range	20 MHz to 400 MHz
Transceiver dynamic reconfiguration	Allows the reconfiguration of a single channel without affecting the operation of other channels

PCS Features

The Cyclone V core logic connects to the PCS through an 8, 10, 16, 20, 32, or 40 bit interface, depending on the transceiver data rate and protocol. Cyclone V devices contain PCS hard IP to support PCIe Gen1 and Gen2, Gbps Ethernet (GbE), Serial RapidIO® (SRIO), and Common Public Radio Interface (CPRI).

Most of the standard and proprietary protocols from 614 Mbps to 6.144 Gbps are supported.

Table 23. Transceiver PCS Features for Cyclone V Devices

PCS Support	Data Rates (Gbps)	Transmitter Data Path Feature	Receiver Data Path Feature
3-Gbps and 6-Gbps Basic	0.614 to 6.144	• Phase compensation FIFO • Byte serializer • 8B/10B encoder • Transmitter bit-slip	• Word aligner • Deskew FIFO • Rate-match FIFO • 8B/10B decoder • Byte deserializer • Byte ordering • Receiver phase compensation FIFO
PCIe Gen1 (x1, x2, x4)	2.5 and 5.0	• Dedicated PCIe PHY IP core • PIPE 2.0 interface to the core logic	• Dedicated PCIe PHY IP core • PIPE 2.0 interface to the core logic
PCIe Gen2 (x1, x2, x4)(12)			
GbE	1.25	• Custom PHY IP core with preset feature • GbE transmitter synchronization state machine	• Custom PHY IP core with preset feature • GbE receiver synchronization state machine
XAUI (13)	3.125	• Dedicated XAUI PHY IP core • XAUI synchronization state machine for bonding four channels	• Dedicated XAUI PHY IP core • XAUI synchronization state machine for realigning four channels
HiGig	3.75		
SRIO 1.3 and 2.1	1.25 to 3.125	• Custom PHY IP core with preset feature • SRIO version 2.1-compliant x2 and x4 channel bonding	• Custom PHY IP core with preset feature • SRIO version 2.1-compliant x2 and x4 deskew state machine
SDI, SD/HD, and 3G-SDI	0.27(14), 1.485, and 2.97	Custom PHY IP core with preset feature	Custom PHY IP core with preset feature
JESD204A	0.3125(15) to 3.125		

continued...

(12) PCIe Gen2 is supported for Cyclone V GT and ST devices. The PCIe Gen2 x4 support is PCIe-compatible.

(13) XAUI is supported through the soft PCS.

(14) The 0.27-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.

(15) The 0.3125-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.

PCS Support	Data Rates (Gbps)	Transmitter Data Path Feature	Receiver Data Path Feature
Serial ATA Gen1 and Gen2	1.5 and 3.0	• Custom PHY IP core with preset feature • Electrical idle	• Custom PHY IP core with preset feature • Signal detect • Wider spread of asynchronous SSC
CPRI 4.1(16)	0.6144 to 6.144	• Dedicated deterministic latency PHY IP core • Transmitter (TX) manual bit-slip mode	• Dedicated deterministic latency PHY IP core • Receiver (RX) deterministic latency state machine
OBSAI RP3	0.768 to 3.072		
V-by-One HS	Up to 3.75	Custom PHY IP core	• Custom PHY IP core • Wider spread of asynchronous SSC
DisplayPort 1.2(17)	1.62 and 2.7		

SoC with HPS

Each SoC combines an FPGA fabric and an HPS in a single device. This combination delivers the flexibility of programmable logic with the power and cost savings of hard IP in these ways:

- Reduces board space, system power, and bill of materials cost by eliminating a discrete embedded processor
- Allows you to differentiate the end product in both hardware and software, and to support virtually any interface standard
- Extends the product life and revenue through in-field hardware and software updates

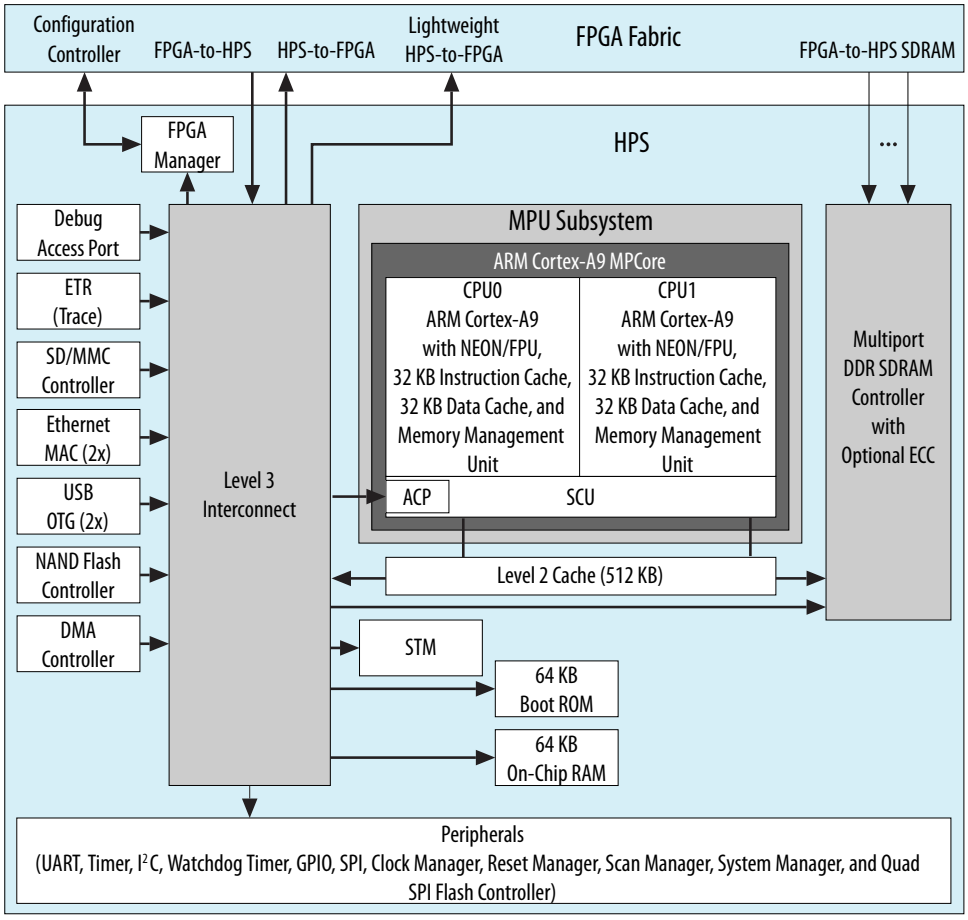
HPS Features

The HPS consists of a dual-core Arm Cortex-A9 MPCore processor, a rich set of peripherals, and a shared multiport SDRAM memory controller, as shown in the following figure.

(16) High-voltage output mode (1000-BASE-CX) is not supported.

(17) Pending characterization.

Figure 11. HPS with Dual-Core Arm Cortex-A9 MPCore Processor



System Peripherals and Debug Access Port

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals to interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports Arm CoreSight debug and core traces to facilitate software development.

Note: Although the FPGA fabric and HPS are on separate power domains, the HPS must remain powered up during operation while the FPGA fabric can be powered up or down as required.

Related Information

Cyclone V Device Family Pin Connection Guidelines
Provides detailed information about power supply pin connection guidelines and power regulator sharing.

Hardware and Software Development

For hardware development, you can configure the HPS and connect your soft logic in the FPGA fabric to the HPS interfaces using the Platform Designer (Standard) system integration tool in the Intel Quartus Prime software.

For software development, the Arm-based SoC devices inherit the rich software development ecosystem available for the Arm Cortex-A9 MPCore processor. The software development process for Intel SoCs follows the same steps as those for other SoC devices from other manufacturers. Support for Linux, VxWorks®, and other operating systems is available for the SoCs. For more information on the operating systems support availability, contact the Intel sales team.

You can begin device-specific firmware and software development on the Intel SoC Virtual Target. The Virtual Target is a fast PC-based functional simulation of a target development system—a model of a complete development board that runs on a PC. The Virtual Target enables the development of device-specific production software that can run unmodified on actual hardware.

Dynamic and Partial Reconfiguration

The Cyclone V devices support dynamic reconfiguration and partial reconfiguration.

Dynamic Reconfiguration

The dynamic reconfiguration feature allows you to dynamically change the transceiver data rates, PMA settings, or protocols of a channel, without affecting data transfer on adjacent channels. This feature is ideal for applications that require on-the-fly multiprotocol or multirate support. You can reconfigure the PMA and PCS blocks with dynamic reconfiguration.

Partial Reconfiguration

Note: The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

Partial reconfiguration allows you to reconfigure part of the device while other sections of the device remain operational. This capability is important in systems with critical uptime requirements because it allows you to make updates or adjust functionality without disrupting services.

Apart from lowering cost and power consumption, partial reconfiguration increases the effective logic density of the device because placing device functions that do not operate simultaneously is not necessary. Instead, you can store these functions in external memory and load them whenever the functions are required. This capability reduces the size of the device because it allows multiple applications on a single device—saving the board space and reducing the power consumption.

Intel simplifies the time-intensive task of partial reconfiguration by building this capability on top of the proven incremental compile and design flow in the Intel Quartus Prime design software. With the Intel solution, you do not need to know all the intricate device architecture details to perform a partial reconfiguration.

Partial reconfiguration is supported through the FPP x16 configuration interface. You can seamlessly use partial reconfiguration in tandem with dynamic reconfiguration to enable simultaneous partial reconfiguration of both the device core and transceivers.

Enhanced Configuration and Configuration via Protocol

Cyclone V devices support 1.8 V, 2.5 V, 3.0 V, and 3.3 V programming voltages and several configuration schemes.

Table 24. Configuration Schemes and Features Supported by Cyclone V Devices

Mode	Data Width	Max Clock Rate (MHz)	Max Data Rate (Mbps)	Decompression	Design Security	Partial Reconfiguration[18]	Remote System Update
AS through the EPCS and EPCQ serial configuration device	1 bit, 4 bits	100	—	Yes	Yes	—	Yes
PS through CPLD or external microcontroller	1 bit	125	125	Yes	Yes	—	—
FPP	8 bits	125	—	Yes	Yes	—	Parallel flash loader
	16 bits	125	—	Yes	Yes	Yes	
CvP (PCIe)	x1, x2, and x4 lanes	—	—	Yes	Yes	Yes	—
JTAG	1 bit	33	33	—	—	—	—

Instead of using an external flash or ROM, you can configure the Cyclone V devices through PCIe using CvP. The CvP mode offers the fastest configuration rate and flexibility with the easy-to-use PCIe hard IP block interface. The Cyclone V CvP implementation conforms to the PCIe 100 ms power-up-to-active time requirement.

(18) The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

Power Management

Leveraging the FPGA architectural features, process technology advancements, and transceivers that are designed for power efficiency, the Cyclone V devices consume less power than previous generation Cyclone FPGAs:

- Total device core power consumption—less by up to 40%.
- Transceiver channel power consumption—less by up to 50%.

Additionally, Cyclone V devices contain several hard IP blocks that reduce logic resources and deliver substantial power savings of up to 25% less power than equivalent soft implementations.

Document Revision History for Cyclone V Device Overview

Document Version	Changes
2018.05.07	• Added the low power option ("L" suffix) for Cyclone V SE and Cyclone V SX devices in the *Sample Ordering Code and Available Options* diagrams. • Rebranded as Intel.

Date	Version	Changes
December 2017	2017.12.18	• Updated ALM resources for Cyclone V E, Cyclone V SE, Cyclone V SX, and Cyclone V ST devices.
June 2016	2016.06.10	Updated Cyclone V GT speed grade to –7 in Sample Ordering Code and Available Options for Cyclone V GT Devices diagram.
December 2015	2015.12.21	• Added descriptions to package plan tables for Cyclone V GT and ST devices. • Changed instances of *Quartus II* to *Quartus Prime*.
June 2015	2015.06.12	• Replaced a note to partial reconfiguration feature. Note: The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Altera sales representatives. • Updated logic elements (LE) (K) for the following devices: — Cyclone V E A7: Updated from 149.5 to 150 — Cyclone V GX C3: Updated from 35.5 to 36 — Cyclone V GX C7: Updated from 149.7 to 150 — Cyclone V GT D7: Updated from 149.5 to 150 • Updated MLAB (Kb) in Maximum Resource Counts for Cyclone V GX Devices table as follows: — Cyclone V GX C3: Updated from 291 to 182 — Cyclone V GX C4: Updated from 678 to 424 — Cyclone V GX C5: Updated from 678 to 424 — Cyclone V GX C7: Updated from 1,338 to 836 — Cyclone V GX C9: Updated from 2,748 to 1,717
