## Intel - 5CSEBA2U19C6N Datasheet

Welcome to E-XFL.COM

Embedded - System On Chip (SoC): The Heart of Modern Embedded Systems

**Embedded - System On Chip (SoC)** refers to an integrated circuit that consolidates all the essential components of a computer system into a single chip. This includes a microprocessor, memory, and other peripherals, all packed into one compact and efficient package. SoCs are designed to provide a complete computing solution, optimizing both space and power consumption, making them ideal for a wide range of embedded applications.

#### What are Embedded - System On Chip (SoC)?

**System On Chip (SoC)** integrates multiple functions of a computer or electronic system onto a single chip. Unlike traditional multi-chip solutions. SoCs combine a central

#### Details

Product Status	Active
Architecture	MCU, FPGA
Core Processor	Dual ARM® Cortex®-A9 MPCore <sup>™</sup> with CoreSight <sup>™</sup>
Flash Size	-
RAM Size	64KB
Peripherals	DMA, POR, WDT
Connectivity	CANbus, EBI/EMI, Ethernet, I <sup>2</sup> C, MMC/SD/SDIO, SPI, UART/USART, USB OTG
Speed	925MHz
Primary Attributes	FPGA - 25K Logic Elements
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	484-FBGA
Supplier Device Package	484-UBGA (19x19)
Purchase URL	https://www.e-xfl.com/product-detail/intel/5cseba2u19c6n

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

# **Cyclone V Device Overview**

The Cyclone<sup>®</sup> V devices are designed to simultaneously accommodate the shrinking power consumption, cost, and time-to-market requirements; and the increasing bandwidth requirements for high-volume and cost-sensitive applications.

Enhanced with integrated transceivers and hard memory controllers, the Cyclone V devices are suitable for applications in the industrial, wireless and wireline, military, and automotive markets.

#### **Related Information**

Cyclone V Device Handbook: Known Issues Lists the planned updates to the Cyclone V Device Handbook chapters.

## **Key Advantages of Cyclone V Devices**

#### Table 1. Key Advantages of the Cyclone V Device Family

Advantage	Supporting Feature
Lower power consumption	<ul> <li>Built on TSMC's 28 nm low-power (28LP) process technology and includes an abundance of hard intellectual property (IP) blocks</li> <li>Up to 40% lower power consumption than the previous generation device</li> </ul>
Improved logic integration and differentiation capabilities	<ul> <li>8-input adaptive logic module (ALM)</li> <li>Up to 13.59 megabits (Mb) of embedded memory</li> <li>Variable-precision digital signal processing (DSP) blocks</li> </ul>
Increased bandwidth capacity	<ul><li>3.125 gigabits per second (Gbps) and 6.144 Gbps transceivers</li><li>Hard memory controllers</li></ul>
Hard processor system (HPS) with integrated Arm* Cortex*-A9 MPCore* processor	<ul> <li>Tight integration of a dual-core Arm Cortex-A9 MPCore processor, hard IP, and an FPGA in a single Cyclone V system-on-a-chip (SoC)</li> <li>Supports over 128 Gbps peak bandwidth with integrated data coherency between the processor and the FPGA fabric</li> </ul>
Lowest system cost	<ul> <li>Requires only two core voltages to operate</li> <li>Available in low-cost wirebond packaging</li> <li>Includes innovative features such as Configuration via Protocol (CvP) and partial reconfiguration</li> </ul>

Feature	Description
	<ul> <li>HPS-FPGA bridges—include the FPGA-to-HPS, HPS-to-FPGA, and lightweight HPS-to-FPGA bridges that allow the FPGA fabric to issue transactions to slaves in the HPS, and vice versa</li> <li>FPGA-to-HPS SDRAM controller subsystem—provides a configurable interface to the multiport front end (MPFE) of the HPS SDRAM controller</li> <li>Arm CoreSight<sup>™</sup> JTAG debug access port, trace port, and on-chip trace storage</li> </ul>
Configuration	<ul> <li>Tamper protection—comprehensive design protection to protect your valuable IP investments</li> <li>Enhanced advanced encryption standard (AES) design security features</li> <li>CvP</li> <li>Dynamic reconfiguration of the FPGA</li> <li>Active serial (AS) x1 and x4, passive serial (PS), JTAG, and fast passive parallel (FPP) x8 and x16 configuration options</li> <li>Internal scrubbing <sup>(2)</sup></li> <li>Partial reconfiguration <sup>(3)</sup></li> </ul>

# **Cyclone V Device Variants and Packages**

### Table 3. Device Variants for the Cyclone V Device Family

Variant	Description
Cyclone V E	Optimized for the lowest system cost and power requirement for a wide spectrum of general logic and DSP applications
Cyclone V GX	Optimized for the lowest cost and power requirement for 614 Mbps to 3.125 Gbps transceiver applications
Cyclone V GT	The FPGA industry's lowest cost and lowest power requirement for 6.144 Gbps transceiver applications
Cyclone V SE	SoC with integrated Arm-based HPS
Cyclone V SX	SoC with integrated Arm-based HPS and 3.125 Gbps transceivers
Cyclone V ST	SoC with integrated Arm-based HPS and 6.144 Gbps transceivers

## Cyclone V E

This section provides the available options, maximum resource counts, and package plan for the Cyclone V E devices.

The information in this section is correct at the time of publication. For the latest information and to get more details, refer to the Product Selector Guide.

#### **Related Information**

#### Product Selector Guide

Provides the latest information about Intel products.

<sup>(2)</sup> The SEU internal scrubbing feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

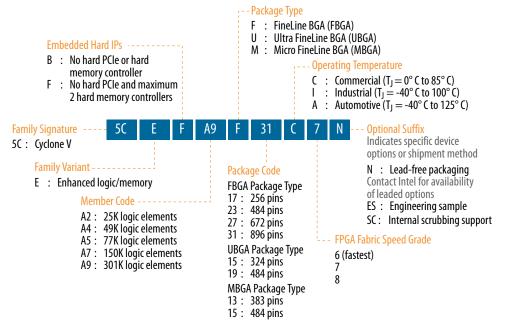

<sup>(3)</sup> The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel<sup>®</sup> sales representatives.

## **Available Options**

#### Figure 1. Sample Ordering Code and Available Options for Cyclone V E Devices

The SEU internal scrubbing feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

### **Related Information**

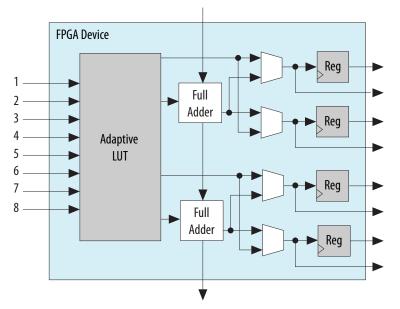

6.144-Gbps Support Capability in Cyclone V GT Devices, Cyclone V Device Handbook Volume 2: Transceivers

Provides more information about 6 Gbps transceiver channel count.

<sup>(11)</sup> If you require CPRI (at 4.9152 Gbps) and PCIe Gen2 transmit jitter compliance, Intel recommends that you use only up to seven full-duplex transceiver channels for CPRI, and up to six full-duplex channels for PCIe Gen2. The CMU channels are not considered full-duplex channels.

#### Figure 8. ALM for Cyclone V Devices

You can configure up to 25% of the ALMs in the Cyclone V devices as distributed memory using MLABs.

#### **Related Information**

Embedded Memory Capacity in Cyclone V Devices on page 21 Lists the embedded memory capacity for each device.

## **Variable-Precision DSP Block**

Cyclone V devices feature a variable-precision DSP block that supports these features:

- Configurable to support signal processing precisions ranging from 9 x 9, 18 x 18 and 27 x 27 bits natively
- A 64-bit accumulator
- A hard preadder that is available in both 18- and 27-bit modes
- Cascaded output adders for efficient systolic finite impulse response (FIR) filters
- Internal coefficient register banks, 8 deep, for each multiplier in 18- or 27-bit mode
- Fully independent multiplier operation
- A second accumulator feedback register to accommodate complex multiplyaccumulate functions
- Fully independent Efficient support for single-precision floating point arithmetic
- The inferability of all modes by the Intel Quartus Prime design software

Variant	Member Code	Code precision		dent Input and plications Ope	18 x 18 Multiplier	18 x 18 Multiplier	
		DSP Block	9 x 9 Multiplier	18 x 18 Multiplier	27 x 27 Multiplier	Adder Mode	Adder Summed with 36 bit Input
	C6	112	336	224	112	112	112
Cyclone V ST	D5	87	261	174	87	87	87
	D6	112	336	224	112	112	112

## **Embedded Memory Blocks**

The embedded memory blocks in the devices are flexible and designed to provide an optimal amount of small- and large-sized memory arrays to fit your design requirements.

## **Types of Embedded Memory**

The Cyclone V devices contain two types of memory blocks:

- 10 Kb M10K blocks—blocks of dedicated memory resources. The M10K blocks are ideal for larger memory arrays while still providing a large number of independent ports.
- 640 bit memory logic array blocks (MLABs)—enhanced memory blocks that are configured from dual-purpose logic array blocks (LABs). The MLABs are ideal for wide and shallow memory arrays. The MLABs are optimized for implementation of shift registers for digital signal processing (DSP) applications, wide shallow FIFO buffers, and filter delay lines. Each MLAB is made up of ten adaptive logic modules (ALMs). In the Cyclone V devices, you can configure these ALMs as ten 32 x 2 blocks, giving you one 32 x 20 simple dual-port SRAM block per MLAB.

## **Embedded Memory Capacity in Cyclone V Devices**

## **Embedded Memory Configurations**

### Table 19. Supported Embedded Memory Block Configurations for Cyclone V Devices

This table lists the maximum configurations supported for the embedded memory blocks. The information is applicable only to the single-port RAM and ROM modes.

Memory Block	Depth (bits)	Programmable Width
MLAB	32	x16, x18, or x20
M10K	256	x40 or x32
	512	x20 or x16
	1К	x10 or x8
	2К	x5 or x4
	4К	x2
	8К	×1

## **Clock Networks and PLL Clock Sources**

550 MHz Cyclone V devices have 16 global clock networks capable of up to operation. The clock network architecture is based on Intel's global, quadrant, and peripheral clock structure. This clock structure is supported by dedicated clock input pins and fractional PLLs.

*Note:* To reduce power consumption, the Intel Quartus Prime software identifies all unused sections of the clock network and powers them down.

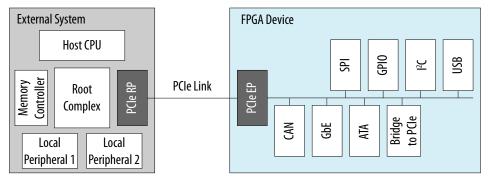

## PCIe Gen1 and Gen2 Hard IP

Cyclone V GX, GT, SX, and ST devices contain PCIe hard IP that is designed for performance and ease-of-use. The PCIe hard IP consists of the MAC, data link, and transaction layers.

The PCIe hard IP supports PCIe Gen2 and Gen1 end point and root port for up to x4 lane configuration. The PCIe Gen2 x4 support is PCIe-compatible.

The PCIe endpoint support includes multifunction support for up to eight functions, as shown in the following figure. The integrated multifunction support reduces the FPGA logic requirements by up to 20,000 LEs for PCIe designs that require multiple peripherals.

#### Figure 9. PCIe Multifunction for Cyclone V Devices

The Cyclone V PCIe hard IP operates independently from the core logic. This independent operation allows the PCIe link to wake up and complete link training in less than 100 ms while the Cyclone V device completes loading the programming file for the rest of the device.

In addition, the PCIe hard IP in the Cyclone V device provides improved end-to-end datapath protection using ECC.

## **External Memory Interface**

This section provides an overview of the external memory interface in Cyclone V devices.

### Hard and Soft Memory Controllers

Cyclone V devices support up to two hard memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices. Each controller supports 8 to 32 bit components of up to 4 gigabits (Gb) in density with two chip selects and optional ECC. For the Cyclone V SoC devices, an additional hard memory controller in the HPS supports DDR3, DDR2, and LPDDR2 SDRAM devices.

All Cyclone V devices support soft memory controllers for DDR3, DDR2, and LPDDR2 SDRAM devices for maximum flexibility.

## **External Memory Performance**

#### Table 20. External Memory Interface Performance in Cyclone V Devices

The maximum and minimum operating frequencies depend on the memory interface standards and the supported delay-locked loop (DLL) frequency listed in the device datasheet.

Interface	Voltage	Maximum Free	Minimum Frequency	
	(V)	Hard Controller	Soft Controller	(MHz)
DDR3 SDRAM	1.5	400	303	303
	1.35	400	303	303
DDR2 SDRAM	1.8	400	300	167
LPDDR2 SDRAM	1.2	333	300	167

## **HPS External Memory Performance**

### Table 21. HPS External Memory Interface Performance

The hard processor system (HPS) is available in Cyclone V SoC devices only.

Interface	Voltage (V)	HPS Hard Controller (MHz)
DDR3 SDRAM	1.5	400
	1.35	400
DDR2 SDRAM	1.8	400
LPDDR2 SDRAM	1.2	333

#### **Related Information**

#### External Memory Interface Spec Estimator

For the latest information and to estimate the external memory system performance specification, use Intel's External Memory Interface Spec Estimator tool.

## **Low-Power Serial Transceivers**

Cyclone V devices deliver the industry's lowest power 6.144 Gbps transceivers at an estimated 88 mW maximum power consumption per channel. Cyclone V transceivers are designed to be compliant with a wide range of protocols and data rates.

## **Transceiver Channels**

The transceivers are positioned on the left outer edge of the device. The transceiver channels consist of the physical medium attachment (PMA), physical coding sublayer (PCS), and clock networks.

## **PCS Features**

The Cyclone V core logic connects to the PCS through an 8, 10, 16, 20, 32, or 40 bit interface, depending on the transceiver data rate and protocol. Cyclone V devices contain PCS hard IP to support PCIe Gen1 and Gen2, Gbps Ethernet (GbE), Serial RapidIO<sup>®</sup> (SRIO), and Common Public Radio Interface (CPRI).

Most of the standard and proprietary protocols from 614 Mbps to 6.144 Gbps are supported.

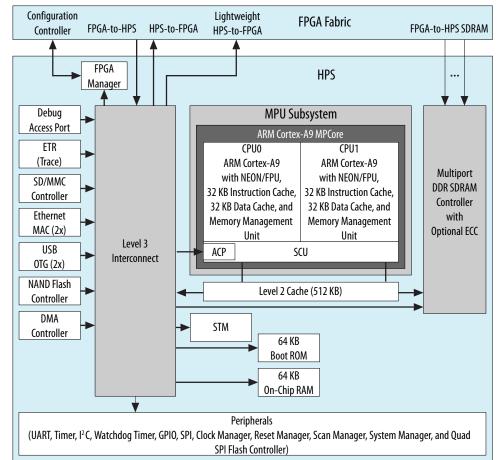

Table 23.	<b>Transceiver PCS</b>	Features for C	vclone V Devices
		i cutui co i ci c	

PCS Support	Data Rates (Gbps)	Transmitter Data Path Feature	Receiver Data Path Feature
3-Gbps and 6-Gbps Basic	0.614 to 6.144	<ul> <li>Phase compensation FIFO</li> <li>Byte serializer</li> <li>8B/10B encoder</li> <li>Transmitter bit-slip</li> </ul>	<ul> <li>Word aligner</li> <li>Deskew FIFO</li> <li>Rate-match FIFO</li> <li>8B/10B decoder</li> <li>Byte deserializer</li> <li>Byte ordering</li> <li>Receiver phase compensation FIFO</li> </ul>

<sup>&</sup>lt;sup>(12)</sup> PCIe Gen2 is supported for Cyclone V GT and ST devices. The PCIe Gen2 x4 support is PCIe-compatible.

- <sup>(13)</sup> XAUI is supported through the soft PCS.
- $^{(14)}$  The 0.27-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.
- <sup>(15)</sup> The 0.3125-Gbps data rate is supported using oversampling user logic that you must implement in the FPGA fabric.

### Figure 11. HPS with Dual-Core Arm Cortex-A9 MPCore Processor

### **System Peripherals and Debug Access Port**

Each Ethernet MAC, USB OTG, NAND flash controller, and SD/MMC controller module has an integrated DMA controller. For modules without an integrated DMA controller, an additional DMA controller module provides up to eight channels of high-bandwidth data transfers. Peripherals that communicate off-chip are multiplexed with other peripherals at the HPS pin level. This allows you to choose which peripherals to interface with other devices on your PCB.

The debug access port provides interfaces to industry standard JTAG debug probes and supports Arm CoreSight debug and core traces to facilitate software development.

Apart from lowering cost and power consumption, partial reconfiguration increases the effective logic density of the device because placing device functions that do not operate simultaneously is not necessary. Instead, you can store these functions in external memory and load them whenever the functions are required. This capability reduces the size of the device because it allows multiple applications on a single device—saving the board space and reducing the power consumption.

Intel simplifies the time-intensive task of partial reconfiguration by building this capability on top of the proven incremental compile and design flow in the Intel Quartus Prime design software. With the Intel solution, you do not need to know all the intricate device architecture details to perform a partial reconfiguration.

Partial reconfiguration is supported through the FPP x16 configuration interface. You can seamlessly use partial reconfiguration in tandem with dynamic reconfiguration to enable simultaneous partial reconfiguration of both the device core and transceivers.

## **Enhanced Configuration and Configuration via Protocol**

Cyclone V devices support 1.8 V, 2.5 V, 3.0 V, and 3.3 V programming voltages and several configuration schemes.

Mode	Data Width	Max Clock Rate (MHz)	Max Data Rate (Mbps)	Decompressi on	Design Security	Partial Reconfigurat ion <sup>(18)</sup>	Remote System Update
AS through the EPCS and EPCQ serial configuration device	1 bit, 4 bits	100	_	Yes	Yes	_	Yes
PS through CPLD or external microcontroller	1 bit	125	125	Yes	Yes	_	_
FPP	8 bits	125	_	Yes	Yes	_	Parallel flash
	16 bits	125	_	Yes	Yes	Yes	loader
CvP (PCIe)	x1, x2, and x4 lanes	-	_	Yes	Yes	Yes	_
JTAG	1 bit	33	33	-	_	_	_

 Table 24.
 Configuration Schemes and Features Supported by Cyclone V Devices

Instead of using an external flash or ROM, you can configure the Cyclone V devices through PCIe using CvP. The CvP mode offers the fastest configuration rate and flexibility with the easy-to-use PCIe hard IP block interface. The Cyclone V CvP implementation conforms to the PCIe 100 ms power-up-to-active time requirement.

### **Related Information**

Configuration via Protocol (CvP) Implementation in Intel FPGAs User Guide Provides more information about CvP.

<sup>&</sup>lt;sup>(18)</sup> The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Intel sales representatives.

## **Power Management**

Leveraging the FPGA architectural features, process technology advancements, and transceivers that are designed for power efficiency, the Cyclone V devices consume less power than previous generation Cyclone FPGAs:

- Total device core power consumption—less by up to 40%.
- Transceiver channel power consumption—less by up to 50%.

Additionally, Cyclone V devices contain several hard IP blocks that reduce logic resources and deliver substantial power savings of up to 25% less power than equivalent soft implementations.

# **Document Revision History for Cyclone V Device Overview**

Document Version	Changes
2018.05.07	<ul> <li>Added the low power option ("L" suffix) for Cyclone V SE and Cyclone V SX devices in the Sample Ordering Code and Available Options diagrams.</li> <li>Rebranded as Intel.</li> </ul>

Date	Version	Changes
December 2017	2017.12.18	Updated ALM resources for Cyclone V E, Cyclone V SE, Cyclone V SX, and Cyclone V ST devices.
June 2016	2016.06.10	Updated Cyclone V GT speed grade to $-7$ in Sample Ordering Code and Available Options for Cyclone V GT Devices diagram.
December 2015	2015.12.21	<ul> <li>Added descriptions to package plan tables for Cyclone V GT and ST devices.</li> <li>Changed instances of <i>Quartus II</i> to <i>Quartus Prime</i>.</li> </ul>
June 2015	2015.06.12	<ul> <li>Replaced a note to partial reconfiguration feature. Note: The partial reconfiguration feature is available for Cyclone V E, GX, SE, and SX devices with the "SC" suffix in the part number. For device availability and ordering, contact your local Altera sales representatives.</li> <li>Updated logic elements (LE) (K) for the following devices: <ul> <li>Cyclone V E A7: Updated from 149.5 to 150</li> <li>Cyclone V GX C3: Updated from 149.7 to 150</li> <li>Cyclone V GT D7: Updated from 149.5 to 150</li> <li>Cyclone V GT D7: Updated from 149.5 to 150</li> </ul> </li> <li>Updated MLAB (Kb) in Maximum Resource Counts for Cyclone V GX Devices table as follows: <ul> <li>Cyclone V GX C3: Updated from 291 to 182</li> <li>Cyclone V GX C4: Updated from 678 to 424</li> <li>Cyclone V GX C7: Updated from 1,338 to 836</li> <li>Cyclone V GX C9: Updated from 1,717</li> </ul> </li> </ul>

'6.144 Gbps'.Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature.December 20122012.12.28Updated the GPIO and transceiver counts for the MBGA packages.Updated the GPIO counts for the U484 package of the Cyclone V E A9, GC 9, and GT D9 devices.Updated the vertical migration table for vertical migration of the U484 packages.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.November 20122012.11.19Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages.Added ordering code for five-transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance.Added onte on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added the "Embedded Memory Configurations" sections. Added Table 1, Table 3, Table 16, Table 19, and Table 20.			Updated the PCS Support in Table 23 from 5 Gbps to '6 Gbps'.
Clarified that partial reconfiguration is an advanced feature. Contact Alter for support of the feature.December 20122012.12.28Updated the pin counts for the MBGA packages. Updated the GPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices. Updated the vertical migration table for vertical migration of the U484 packages. Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. Added ordering code for five-transceiver devices for Cyclone V GT and S Updated the vertical migration table to add MBGA packages. Added performance information for HPS memory controller. Removed DDR3U support. Updated the vertical and update tables for Cyclone V ST speed grade information. Added information on maximum transceiver channel usage restrictions for PCI Gen2 and CPR 14 4.9152 Gbps transmit jitter compliance. Added template.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0Restructured the document. Added table 1, Table 3, Table 16, Table 19, and Table 20.			
for support of the feature.December 20122012.12.28Updated the pin counts for the MBGA packages. Updated the GPIO and transceiver counts for the MBGA packages. Updated the GPIO counts for the U484 package of the Cyclone V E A9, C C9, and GT D9 devices. Updated the vertical migration table for vertical migration of the U484 packages. Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19• Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT. • Added ordering code for five-transceiver devices for Cyclone V GT and S* Updated the vertical migration table to add MBGA packages. • Added performance information for HPS memory controller. • Removed DDR3U support. • Updated information on maximum transceiver channel usage restrictions for PCI Gen2 and CPRI at 4.9152 Gbps transmit jitter compliance. • Added onte on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software. • Updated template.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0• Restructured the document. • Added Table 1, Table 3, Table 16, Table 19, and Table 20.			• Updated the Data Rates (Gbps) in Table 23 of CPRI 4.1 to '6.144 Gbps'.
• Updated the GPIO and transceiver counts for the MBGA packages.• Updated the GPIO counts for the U484 package of the Cyclone V E A9, G C9, and GT D9 devices.• Updated the vertical migration table for vertical migration of the U484 packages.• Updated the vertical migration table for vertical migration of the U484 packages.• Updated the vertical migration table for vertical migration of the U484 packages.• Updated the MLAB supported programmable widths at 32 bits depth.November 20122012.11.19• Added new MBGA packages and additional U484 packages for Cyclone V GX, and GT.• Added ordering code for five-transceiver devices for Cyclone V GT and S • Updated the vertical migration table to add MBGA packages.• Added performance information for HPS memory controller.• Removed DDR3U support.• Updated Cyclone V ST speed grade information.• Added note on the differences between GPIO reported in Overview with User I/O numbers shown in the Quartus II software.July 20122.1Added support for PCIE Gen2 x4 lane configuration (PCIe-compatible)June 20122.0• Restructured the document.• Added the "Embedded Memory Configurations" sections.• Added Table 1, Table 3, Table 16, Table 19, and Table 20.			<ul> <li>Clarified that partial reconfiguration is an advanced feature.
