## Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

## Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

### Details

|                                |                                                                                                                                                                       |

**Table 2-7. Maximum Number of Elements in a Block**

| Width of Multiply | x9 | x18 | x36 |
|-------------------|----|-----|-----|
| MULT              | 8  | 4   | 1   |
| MAC               | 2  | 2   | —   |
| MULTADD           | 4  | 2   | —   |
| MULTADDSUM        | 2  | 1   | —   |

Some options are available in four elements. The input register in all the elements can be directly loaded or can be loaded as shift registers from previous operand registers. In addition by selecting “dynamic operation” in the ‘Signed/Unsigned’ options the operands can be switched between signed and unsigned on every cycle. Similarly by selecting ‘Dynamic operation’ in the ‘Add/Sub’ option the Accumulator can be switched between addition and subtraction on every cycle.

### MULT sysDSP Element

This multiplier element implements a multiply with no addition or accumulator nodes. The two operands, A and B, are multiplied and the result is available at the output. The user can enable the input/output and pipeline registers. Figure 2-19 shows the MULT sysDSP element.

**Figure 2-19. MULT sysDSP Element**

### MAC sysDSP Element

In this case the two operands, A and B, are multiplied and the result is added with the previous accumulated value. This accumulated value is available at the output. The user can enable the input and pipeline registers but the output register is always enabled. The output register is used to store the accumulated value. A registered overflow signal is also available. The overflow conditions are provided later in this document. Figure 2-20 shows the MAC sysDSP element.

**Figure 2-27. Input Register DDR Waveforms**

**Figure 2-28. INDDRxB Primitive**

### Output Register Block

The output register block provides the ability to register signals from the core of the device before they are passed to the sys/O buffers. The block contains a register for SDR operation that is combined with an additional latch for DDR operation. Figure 2-29 shows the diagram of the Output Register Block.

In SDR mode, ONEG0 feeds one of the flip-flops that then feeds the output. The flip-flop can be configured a D-type or latch. In DDR mode, ONEG0 is fed into one register on the positive edge of the clock and OPOS0 is latched. A multiplexer running off the same clock selects the correct register for feeding to the output (D0).

Figure 2-30 shows the design tool DDR primitives. The SDR output register has reset and clock enable available. The additional register for DDR operation does not have reset or clock enable available.

## BLVDS

The LatticeECP/EC devices support BLVDS standard. This standard is emulated using complementary LVCMOS outputs in conjunction with a parallel external resistor across the driver outputs. BLVDS is intended for use when multi-drop and bi-directional multi-point differential signaling is required. The scheme shown in Figure 3-2 is one possible solution for bi-directional multi-point differential signals.

**Figure 3-2. BLVDS Multi-point Output Example**

1. Jitter sample is taken over 10,000 samples of the primary PLL output with clean reference clock.

2. Output clock is valid after  $t_{LOCK}$  for PLL reset and dynamic delay adjustment.

3. Using LVDS output buffers.

4. Relative to CLKOP.

Timing v.G 0.30

# LatticeECP/EC Family Data Sheet Supplemental Information

September 2012

Data Sheet

## For Further Information

A variety of technical notes for the LatticeECP/EC family are available on the Lattice web site at [www.latticesemi.com](http://www.latticesemi.com).

- LatticeECP/EC sysIO Usage Guide (TN1056)
- LatticeECP/EC sysCLOCK PLL Design and Usage Guide (TN1049)
- Memory Usage Guide for LatticeECP/EC Devices (TN1051)
- LatticeECP/EC DDR Usage Guide (TN1050)
- Power Estimation and Management for LatticeECP/EC and LatticeXP Devices (TN1052)
- LatticeECP-DSP sysDSP Usage Guide (TN1057)
- LatticeECP/EC sysCONFIG Usage Guide (TN1053)
- IEEE 1149.1 Boundary Scan Testability in Lattice Devices

For further information about interface standards refer to the following web sites:

- JEDEC Standards (LVTTTL, LVCMOS, SSTL, HSTL): [www.jedec.org](http://www.jedec.org)
- PCI: [www.pcisig.com](http://www.pcisig.com)

|---------------|---------|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| June 2004     | 01.0    | —                              | Initial release.                                                                                                                                                                                                                                                        |
| August 2004   | 01.1    | Introduction                   | Added new device LFECP/LFEC33 in Table 1-1.                                                                                                                                                                                                                             |
|               |         | Architecture                   | Added New device LFECP/LFEC33 in Tables 2-9, 2-10 and 2-11.                                                                                                                                                                                                             |
|               |         | DC & Switching Characteristics | Added New device LFECP/LFEC33 on Supply current (Standby) tables.<br>Added New device LFECP/LFEC33 on Initialization Supply current tables.                                                                                                                             |
|               |         | Ordering Information           | Added 33K Logic Capacity Device in Part Number Description section.<br>Added EC33, ECP33 device: Industrial and Commercial to Part Number table.<br>Corrected I/O counts in the part number tables for 100/144 TQFP and 208 PQFP packages to match Table 1-1 on page 1. |
| November 2004 | 01.3    | Introduction                   | Changed DDR333 (166MHz) to DDR400 (200MHz)                                                                                                                                                                                                                              |
|               |         |                                | Added “RSDS” offering to the Features list: Flexible I/O Buffer                                                                                                                                                                                                         |
|               |         | Architecture                   | Added information about Secondary Clock Sources                                                                                                                                                                                                                         |
|               |         |                                | Added information about DCS                                                                                                                                                                                                                                             |
|               |         |                                | Added a section on “Recommended Power-up Sequence”                                                                                                                                                                                                                      |
|               |         |                                | Updated Figure 2-24 “DQS Routing”                                                                                                                                                                                                                                       |
|               |         |                                | Added DSP Block performance numbers to Table 2-11                                                                                                                                                                                                                       |
|               |         |                                | Added another row for RSDS in Table 2-13 and Table 2-14                                                                                                                                                                                                                 |
|               |         | DC & Switching Characteristics | Updated new timing numbers                                                                                                                                                                                                                                              |
|               |         |                                | Added numbers to derating table                                                                                                                                                                                                                                         |
|               |         |                                | Added DC conditions to RSDS table                                                                                                                                                                                                                                       |
|               |         |                                | Changed LVDS Max. $V_{CCIO}$ to 2.625                                                                                                                                                                                                                                   |
|               |         |                                | Added a row for RSDS in “Operating Condition” table                                                                                                                                                                                                                     |
|               |         |                                | Updated standby and initialization current table                                                                                                                                                                                                                        |
|               |         |                                | Added figure 3-12: sysConfig SPI port sequence                                                                                                                                                                                                                          |
|               |         |                                | Added DDR Timing Table and DDR Timings Figure 3-6                                                                                                                                                                                                                       |
|               |         | Pinout Information             | Added LFECP/EC6 to Pin Information                                                                                                                                                                                                                                      |
|               |         |                                | Added LFECP/EC6 to Power Supply and NC Connections                                                                                                                                                                                                                      |
|               |         |                                | Added LFECP/EC6 144 TQFP Logic Signal Connections                                                                                                                                                                                                                       |
|               |         |                                | Added LFECP/EC6 208 PQFP Logic Signal Connections                                                                                                                                                                                                                       |
|               |         |                                | Added LFECP/EC6 256 fpBGA Logic Signal Connections                                                                                                                                                                                                                      |
|               |         |                                | Added LFECP/EC6 484 fpBGA Logic Signal Connections                                                                                                                                                                                                                      |
|               |         | Ordering Information           | Added 33K Logic Capacity Device in Part Number Description section.                                                                                                                                                                                                     |
|               |         |                                | Added Part Number table for Commercial EC33.                                                                                                                                                                                                                            |
|               |         |                                | Added Part Number table for Commercial ECP33.                                                                                                                                                                                                                           |
|               |         |                                | Added Part Number table for Industrial EC33.                                                                                                                                                                                                                            |
|               |         |                                | Added Part Number table for Industrial ECP33.                                                                                                                                                                                                                           |
