### **Understanding Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

#### **Details**

Product Status	Obsolete
Number of LABs/CLBs	-
Number of Logic Elements/Cells	6100
Total RAM Bits	94208
Number of I/O	97
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	144-LQFP
Supplier Device Package	144-TQFP (20x20)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/lattice-semiconductor/lfecp6e-3tn144i">https://www.e-xfl.com/product-detail/lattice-semiconductor/lfecp6e-3tn144i</a>

Data Sheet

### Architecture Overview

The LatticeECP-DSP and LatticeEC architectures contain an array of logic blocks surrounded by Programmable I/O Cells (PIC). Interspersed between the rows of logic blocks are rows of sysMEM Embedded Block RAM (EBR), as shown in Figures 2-1 and 2-2. In addition, LatticeECP-DSP supports an additional row of DSP blocks, as shown in Figure 2-2.

There are two kinds of logic blocks, the Programmable Functional Unit (PFU) and Programmable Functional unit without RAM/ROM (PFF). The PFU contains the building blocks for logic, arithmetic, RAM, ROM and register functions. The PFF block contains building blocks for logic, arithmetic and ROM functions. Both PFU and PFF blocks are optimized for flexibility, allowing complex designs to be implemented quickly and efficiently. Logic Blocks are arranged in a two-dimensional array. Only one type of block is used per row. The PFU blocks are used on the outside rows. The rest of the core consists of rows of PFF blocks interspersed with rows of PFU blocks. For every three rows of PFF blocks there is a row of PFU blocks.

Each PIC block encompasses two PIOs (PIO pairs) with their respective sysI/O interfaces. PIO pairs on the left and right edges of the device can be configured as LVDS transmit/receive pairs. sysMEM EBRs are large dedicated fast memory blocks. They can be configured as RAM or ROM.

The PFU, PFF, PIC and EBR Blocks are arranged in a two-dimensional grid with rows and columns as shown in Figure 2-1. The blocks are connected with many vertical and horizontal routing channel resources. The place and route software tool automatically allocates these routing resources.

At the end of the rows containing the sysMEM Blocks are the sysCLOCK Phase Locked Loop (PLL) Blocks. These PLLs have multiply, divide and phase shifting capability; they are used to manage the phase relationship of the clocks. The LatticeECP/EC architecture provides up to four PLLs per device.

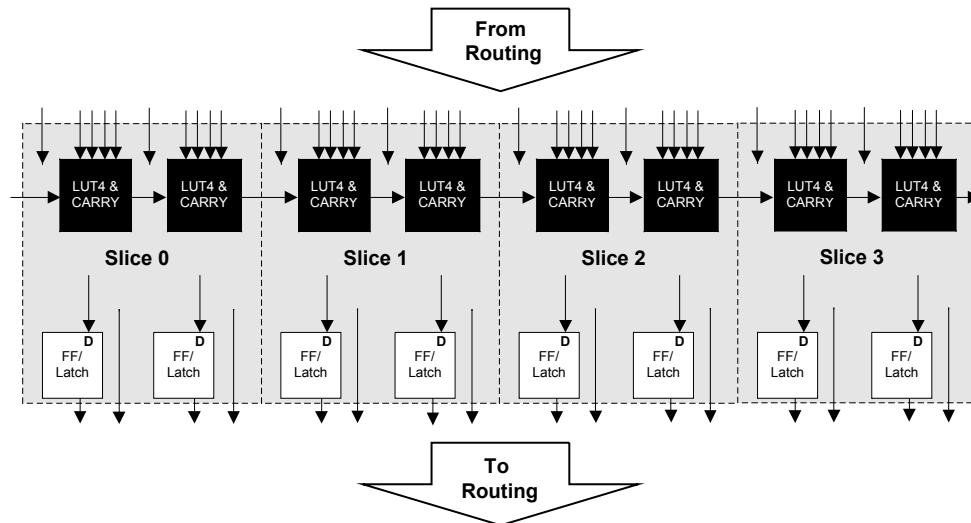

Every device in the family has a JTAG Port with internal Logic Analyzer (ispTRACY) capability. The sysCONFIG™ port which allows for serial or parallel device configuration. The LatticeECP/EC devices use 1.2V as their core voltage.

## PFU and PFF Blocks

The core of the LatticeECP/EC devices consists of PFU and PFF blocks. The PFUs can be programmed to perform Logic, Arithmetic, Distributed RAM and Distributed ROM functions. PFF blocks can be programmed to perform Logic, Arithmetic and ROM functions. Except where necessary, the remainder of the data sheet will use the term PFU to refer to both PFU and PFF blocks.

Each PFU block consists of four interconnected slices, numbered 0-3 as shown in Figure 2-3. All the interconnections to and from PFU blocks are from routing. There are 53 inputs and 25 outputs associated with each PFU block.

**Figure 2-3. PFU Diagram**

### Slice

Each slice contains two LUT4 lookup tables feeding two registers (programmed to be in FF or Latch mode), and some associated logic that allows the LUTs to be combined to perform functions such as LUT5, LUT6, LUT7 and LUT8. There is control logic to perform set/reset functions (programmable as synchronous/asynchronous), clock select, chip-select and wider RAM/ROM functions. Figure 2-4 shows an overview of the internal logic of the slice. The registers in the slice can be configured for positive/negative and edge/level clocks.

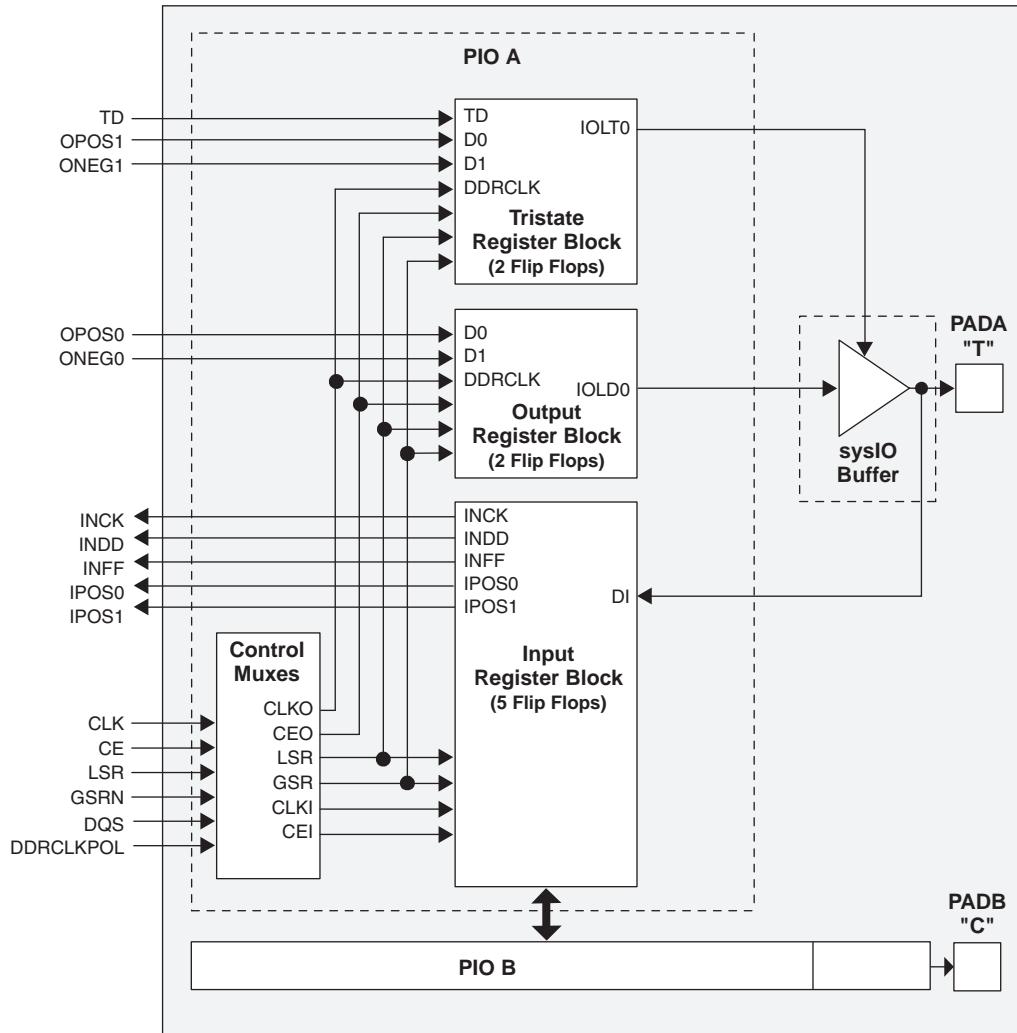

There are 14 input signals: 13 signals from routing and one from the carry-chain (from adjacent slice or PFU). There are 7 outputs: 6 to routing and one to carry-chain (to adjacent PFU). Table 2-1 lists the signals associated with each slice.

For further information about the sysDSP block, please see the list of technical information at the end of this data sheet.

## Programmable I/O Cells (PIC)

Each PIC contains two PIOs connected to their respective sysI/O Buffers which are then connected to the PADs as shown in Figure 2-24. The PIO Block supplies the output data (DO) and the Tri-state control signal (TO) to sysI/O buffer, and receives input from the buffer.

**Figure 2-24. PIC Diagram**

Two adjacent PIOs can be joined to provide a differential I/O pair (labeled as "T" and "C") as shown in Figure 2-25. The PAD Labels "T" and "C" distinguish the two PIOs. Only the PIO pairs on the left and right edges of the device can be configured as LVDS transmit/receive pairs.

One of every 16 PIOs contains a delay element to facilitate the generation of DQS signals. The DQS signal feeds the DQS bus which spans the set of 16 PIOs. Figure 2-25 shows the assignment of DQS pins in each set of 16 PIOs. The exact DQS pins are shown in a dual function in the Logic Signal Connections table at the end of this data sheet. Additional detail is provided in the Signal Descriptions table at the end of this data sheet. The DQS signal from the bus is used to strobe the DDR data from the memory into input register blocks. This interface is designed for memories that support one DQS strobe per eight bits of data.

1. The average DC current drawn by I/Os between GND connections, or between the last GND in an I/O bank and the end of an I/O bank, as shown in the logic signal connections table shall not exceed n \* 8mA. Where n is the number of I/Os between bank GND connections or between the last GND in a bank and the end of a bank.

## BLVDS

The LatticeECP/EC devices support BLVDS standard. This standard is emulated using complementary LVCMOS outputs in conjunction with a parallel external resistor across the driver outputs. BLVDS is intended for use when multi-drop and bi-directional multi-point differential signaling is required. The scheme shown in Figure 3-2 is one possible solution for bi-directional multi-point differential signals.

**Figure 3-2. BLVDS Multi-point Output Example**

**Table 3-2. BLVDS DC Conditions<sup>1</sup>**

### Over Recommended Operating Conditions

Parameter	Description	Typical		Units
		Zo = 45	Zo = 90	
Z <sub>OUT</sub>	Output impedance	100	100	ohm
R <sub>TLEFT</sub>	Left end termination	45	90	ohm
R <sub>TRIGHT</sub>	Right end termination	45	90	ohm
V <sub>OH</sub>	Output high voltage	1.375	1.48	V
V <sub>OL</sub>	Output low voltage	1.125	1.02	V
V <sub>OD</sub>	Output differential voltage	0.25	0.46	V
V <sub>CM</sub>	Output common mode voltage	1.25	1.25	V
I <sub>DC</sub>	DC output current	11.2	10.2	mA

1. For input buffer, see LVDS table.

## Typical Building Block Function Performance

### Pin-to-Pin Performance (LVCMOS25 12mA Drive)

Function	-5 Timing	Units
<b>Basic Functions</b>		
16-bit decoder	5.5	ns
32-bit decoder	6.9	ns
64-bit decoder	7.1	ns
4:1 MUX	4.3	ns
8:1 MUX	4.7	ns
16:1 MUX	5.0	ns
32:1 MUX	5.5	ns

### Register-to-Register Performance<sup>1</sup>

Function	-5 Timing	Units
<b>Basic Functions</b>		
16 bit decoder	410	MHz
32 bit decoder	283	MHz
64 bit decoder	272	MHz
4:1 MUX	613	MHz
8:1 MUX	565	MHz
16:1 MUX	526	MHz
32:1 MUX	442	MHz
8-bit adder	363	MHz
16-bit adder	353	MHz
64-bit adder	196	MHz
16-bit counter	414	MHz
32-bit counter	317	MHz
64-bit counter	216	MHz
64-bit accumulator	178	MHz
<b>Embedded Memory Functions</b>		
256x36 Single Port RAM	280	MHz
512x18 True-Dual Port RAM	280	MHz
<b>Distributed Memory Functions</b>		
16x2 Single Port RAM	460	MHz
64x2 Single Port RAM	375	MHz
128x4 Single Port RAM	294	MHz
32x2 Pseudo-Dual Port RAM	392	MHz
64x4 Pseudo-Dual Port RAM	332	MHz
<b>DSP Function<sup>2</sup></b>		
9x9 Pipelined Multiply/Accumulate	242	MHz
18x18 Pipelined Multiply/Accumulate	238	MHz
36x36 Pipelined Multiply	235	MHz

1. These timing numbers were generated using the ispLEVER design tool. Exact performance may vary with design and tool version. The tool uses internal parameters that have been characterized but are not tested on every device.

2. Applies to LatticeECP devices only.

## Thermal Management

Thermal management is recommended as part of any sound FPGA design methodology. To assess the thermal characteristics of a system, Lattice specifies a maximum allowable junction temperature in all device data sheets. Designers must complete a thermal analysis of their specific design to ensure that the device and package do not exceed the junction temperature limits. Refer to the Thermal Management document to find the device/package specific thermal values.

## For Further Information

For further information regarding Thermal Management, refer to the following located on the Lattice website at [www.latticesemi.com](http://www.latticesemi.com).

- Thermal Management document
- Technical Note TN1052 - Power Estimation and Management for LatticeECP/EC and LatticeXP Devices
- Power Calculator tool included with Lattice's ispLEVER design tool, or as a standalone download from [www.latticesemi.com/software](http://www.latticesemi.com/software)

Date	Version	Section	Change Summary
September 2005	02.0	Architecture	sysIO section has been updated.
		DC & Switching Characteristics	Recommended Operating Conditions has been updated with V <sub>CCPLL</sub> .
			DC Electrical Characteristics table has been updated
			Removed 5V Tolerant Input Buffer section.
			Register-to-Register performance table has been updated (rev. G 0.28).
			LatticeECP/EC External Switching Characteristics table has been updated (rev. G 0.28).
			LatticeECP/EC Internal Switching Characteristics table has been updated (rev. G 0.28).
			LatticeECP/EC Family Timing Adders have been updated (rev. G 0.28).
			sysCLOCK PLL timing table has been updated (rev. G 0.28)
		Pinout Information	Signal Description table has been updated with V <sub>CCPLL</sub> .
November 2005	02.1	DC & Switching Characteristics	Pin-to-Pin Performance table has been updated (G 0.30) - 4:1MUX, 8:1MUX, 16:1MUX, 32:1MUX Register-to-Register Performance (G 0.30) - No timing number changes.
			External Switching Characteristics (G 0.30) - No timing number changes.
			Internal Switching Characteristics (G 0.30) -t <sub>SUP_DSP</sub> , t <sub>HP_DSP</sub> , t <sub>SUO_DSP</sub> , t <sub>HO_DSP</sub> , t <sub>COI_DSP</sub> , t <sub>COD_DSP</sub> numbers have been updated.
			Family Timing Adders (G 0.30) - No timing number changes.
			sysCLOCK PLL Timing (G 0.30) - No timing number changes.
			sysCONFIG Port Timing Specifications (G 0.30) - No timing number changes.
			Master Clock (G 0.30) - No timing number changes.
			JTAG Port Timing Specification (G 0.30) - No timing number changes.
		Ordering Information	Added 208-PQFP lead-free part numbers.
March 2006	02.2	DC & Switching Characteristics	Added footnote 3. to V <sub>CCAUX</sub> in the Recommended Operating Conditions table.
January 2007	02.3	Architecture	EBR Asynchronous Reset section added.
February 2007	02.4	Architecture	Updated EBR Asynchronous Reset section.
			Updated Maximum Number of Elements in a Block table - MAC value for x9 changed to 2.
May 2007	02.5	Architecture	Updated text in Ripple Mode section.
November 2007	02.6	DC & Switching Characteristics	Added JTAG Port Waveforms diagram.
			Updated t <sub>RST</sub> timing information in the sysCLOCK PLL Timing table.
		Pinout Information	Added Thermal Management text section.
		Supplemental Information	Updated title list.
February 2008	02.7	DC & Switching Characteristics	Read/Write Mode (Normal) and Read/Write Mode with Input and Output Registers waveforms in the EBR Memory Timing Diagrams section have been updated.
September 2012	02.8	All	Updated document with new corporate logo.
