What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

3. Address Space

3.1 Address Space

This LSI has a 4-Gbyte address space, consisting of the range of addresses from 0000 0000h to FFFF FFFFh. That is, linear access to an address space of up to 4 Gbytes is possible, and this contains both program and data areas.

Figure 3.1 shows the memory maps in the respective operating modes. Accessible areas will differ according to the operating mode and states of control bits.

Note 1. Supply current values are with all output pins unloaded and all input pull-up MOSs in the off state.

Note 2. Measured with clocks supplied to the peripheral functions. This does not include the BGO operation.

Note 3. I_{CC} depends on f (ICLK) as follows. (ICLK:PCLK:BCLK:BCLK pin = 8:4:4:2)

I_{CC} Max. = 0.87 × f + 13 (max. operation in high-speed operating mode)

I_{CC} Typ. = 0.35 × f + 5 (normal operation in high-speed operating mode)

I_{CC} Typ. = 1.0 × f + 3 (low-speed operating mode 1)

I_{CC} Max. = 0.48 × f + 12 (sleep mode)

Note 4. This does not include the BGO operation.

Note 5. This is the increase for programming or erasure of the ROM or flash memory for data storage during program execution.

Note 6. Supply of the clock signal to peripherals is stopped in this state. This does not include the BGO operation.

Note 7. The current values for 10-bit A/D converter and 10-bit D/A converter are included in the current from the VREFH pin.

Note 8. The values are the sum of I_{AVCC0} and I_{VREFH}.
