Microchip Technology - A3PE3000-1FGG484I Datasheet

Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

Details	
Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	-
Total RAM Bits	516096
Number of I/O	341
Number of Gates	3000000
Voltage - Supply	1.425V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	484-BGA
Supplier Device Package	484-FPBGA (23x23)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/a3pe3000-1fgg484i

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

Thermal Characteristics

Introduction

The temperature variable in Designer software refers to the junction temperature, not the ambient temperature. This is an important distinction because dynamic and static power consumption cause the chip junction to be higher than the ambient temperature.

EQ 1 can be used to calculate junction temperature.

$$T_J = \text{Junction Temperature} = \Delta T + T_A$$

EQ 1

where:

T_A = Ambient Temperature

ΔT = Temperature gradient between junction (silicon) and ambient $\Delta T = \theta_{ja} * P$

θ_{ja} = Junction-to-ambient of the package. θ_{ja} numbers are located in Table 2-5.

P = Power dissipation

Package Thermal Characteristics

The device junction-to-case thermal resistivity is θ_{jc} and the junction-to-ambient air thermal resistivity is θ_{ja}. The thermal characteristics for θ_{ja} are shown for two air flow rates. The absolute maximum junction temperature is 110°C. EQ 2 shows a sample calculation of the absolute maximum power dissipation allowed for an 896-pin FBGA package at commercial temperature and in still air.

$$\text{Maximum Power Allowed} = \frac{\text{Max. junction temp. (°C)} - \text{Max. ambient temp. (°C)}}{\theta_{ja}\text{(°C/W)}} = \frac{110\text{°C} - 70\text{°C}}{13.6\text{°C/W}} = 5.88\text{ W}$$

EQ 2

Table 2-5 • **Package Thermal Resistivities**

Package Type	Pin Count	θ_{jc}	θ_{ja}			Units
			Still Air	**200 ft./min.**	**500 ft./min.**

	8 mA	33	37
	12 mA	33	37
3.3 V PCI/PCI-X	Per PCI/PCI-X specification	25	75
3.3 V GTL	20 mA [4]	11	–
2.5 V GTL	20 mA [4]	14	–

Notes:

1. *These maximum values are provided for informational reasons only. Minimum output buffer resistance values depend on VCCI, drive strength selection, temperature, and process. For board design considerations and detailed output buffer resistances, use the corresponding IBIS models located on the Microsemi SoC Products Group website at www.microsemi.com/index.php?option=com_content&id=1671&lang=en&view=article.*
2. $R_{(PULL\text{-}DOWN\text{-}MAX)}$ *= (VOLspec) / IOLspec*
3. $R_{(PULL\text{-}UP\text{-}MAX)}$ *= (VCCImax – VOHspec) / IOHspec*
4. *Output drive strength is below JEDEC specification.*

2.5 V LVCMOS

Low-Voltage CMOS for 2.5 V is an extension of the LVCMOS standard (JESD8-5) used for general-purpose 2.5 V applications.

***Table 2-33* • Minimum and Maximum DC Input and Output Levels**

2.5 V LVCMOS	VIL		VIH		VOL	VOH	IOL	IOH	IOSL	IOSH	IIL[1]	IIH[2]

HSTL Class II

High-Speed Transceiver Logic is a general-purpose high-speed 1.5 V bus standard (EIA/JESD8-6). ProASIC3E devices support Class II. This provides a differential amplifier input buffer and a push-pull output buffer.

Table 2-63 • Minimum and Maximum DC Input and Output Levels

Note: For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-5 for derating values.

Global Resource Characteristics

A3PE600 Clock Tree Topology

Clock delays are device-specific. Figure 2-38 is an example of a global tree used for clock routing. The global tree presented in Figure 2-38 is driven by a CCC located on the west side of the A3PE600 device. It is used to drive all D-flip-flops in the device.

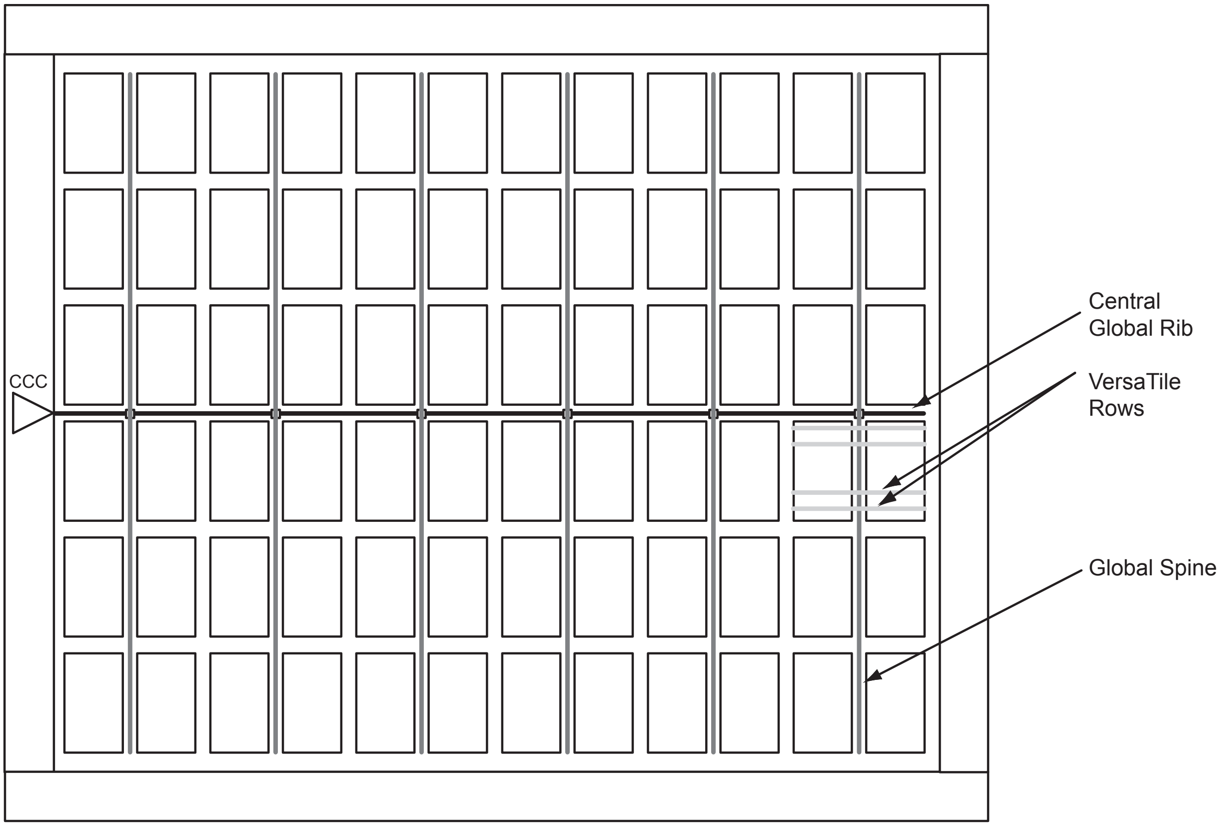

Figure 2-38 • **Example of Global Tree Use in an A3PE600 Device for Clock Routing**

Global Tree Timing Characteristics

Global clock delays include the central rib delay, the spine delay, and the row delay. Delays do not include I/O input buffer clock delays, as these are I/O standard–dependent, and the clock may be driven and conditioned internally by the CCC module. For more details on clock conditioning capabilities, refer to the "Clock Conditioning Circuits" section on page 2-70. Table 2-95 on page 2-69, Table 2-96 on page 2-69, and Table 2-97 on page 2-69 present minimum and maximum global clock delays within the device. Minimum and maximum delays are measured with minimum and maximum loading.

FIFO

Note: For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-5 for derating values.

3 – Pin Descriptions and Packaging

Supply Pins

GND **Ground**

Ground supply voltage to the core, I/O outputs, and I/O logic.

GNDQ **Ground (quiet)**

Quiet ground supply voltage to input buffers of I/O banks. Within the package, the GNDQ plane is decoupled from the simultaneous switching noise originated from the output buffer ground domain. This minimizes the noise transfer within the package and improves input signal integrity. GNDQ must always be connected to GND on the board.

VCC **Core Supply Voltage**

Supply voltage to the FPGA core, nominally 1.5 V. VCC is required for powering the JTAG state machine in addition to VJTAG. Even when a device is in bypass mode in a JTAG chain of interconnected devices, both VCC and VJTAG must remain powered to allow JTAG signals to pass through the device.

VCCIBx **I/O Supply Voltage**

Supply voltage to the bank's I/O output buffers and I/O logic. Bx is the I/O bank number. There are up to eight I/O banks on low power flash devices plus a dedicated VJTAG bank. Each bank can have a separate VCCI connection. All I/Os in a bank will run off the same VCCIBx supply. VCCI can be 1.5 V, 1.8 V, 2.5 V, or 3.3 V, nominal voltage. In general, unused I/O banks should have their corresponding VCCIX pins tied to GND. If an output pad is terminated to ground through any resistor and if the corresponding VCCIX is left floating, then the leakage current to ground is ~ 0uA. However, if an output pad is terminated to ground through any resistor and the corresponding VCCIX grounded, then the leakage current to ground is ~ 3 uA. For unused banks the aforementioned behavior is to be taken into account while deciding if it’s better to float VCCIX of unused bank or tie it to GND.

VMVx **I/O Supply Voltage (quiet)**

Quiet supply voltage to the input buffers of each I/O bank. *x* is the bank number. Within the package, the VMV plane biases the input stage of the I/Os in the I/O banks. This minimizes the noise transfer within the package and improves input signal integrity. Each bank must have at least one VMV connection, and no VMV should be left unconnected. All I/Os in a bank run off the same VMVx supply. VMV is used to provide a quiet supply voltage to the input buffers of each I/O bank. VMVx can be 1.5 V, 1.8 V, 2.5 V, or 3.3 V, nominal voltage. Unused I/O banks should have their corresponding VMV pins tied to GND. VMV and VCCI should be at the same voltage within a given I/O bank. Used VMV pins must be connected to the corresponding VCCI pins of the same bank (i.e., VMV0 to VCCIB0, VMV1 to VCCIB1, etc.).

VCCPLA/B/C/D/E/F **PLL Supply Voltage**

Supply voltage to analog PLL, nominally 1.5 V.

When the PLLs are not used, the place-and-route tool automatically disables the unused PLLs to lower power consumption. The user should tie unused VCCPLx and VCOMPLx pins to ground. Microsemi recommends tying VCCPLx to VCC and using proper filtering circuits to decouple VCC noise from the PLLs. Refer to the PLL Power Supply Decoupling section of the "Clock Conditioning Circuits in Low Power Flash Devices and Mixed Signal FPGAs" chapter of the *ProASIC3E FPGA Fabric User’s Guide* for a complete board solution for the PLL analog power supply and ground.

There are six VCCPLX pins on ProASIC3E devices.

VCOMPLA/B/C/D/E/F **PLL Ground**

Ground to analog PLL power supplies. When the PLLs are not used, the place-and-route tool automatically disables the unused PLLs to lower power consumption. The user should tie unused VCCPLx and VCOMPLx pins to ground.

There are six VCOMPL pins (PLL ground) on ProASIC3E devices.

Revision	Changes	Page
Revision 10 (March 2012)	The "In-System Programming (ISP) and Security" section and "Security" section were revised to clarify that although no existing security measures can give an absolute guarantee, Microsemi FPGAs implement the best security available in the industry (SAR 34669).	I, 1-1
	The Y security option and Licensed DPA Logo were added to the "ProASIC3E Ordering Information" section. The trademarked Licensed DPA Logo identifies that a product is covered by a DPA counter-measures license from Cryptography Research (SAR 34727).	III
	The following sentence was removed from the "Advanced Architecture" section: "In addition, extensive on-chip programming circuitry allows for rapid, single-voltage (3.3 V) programming of IGLOOe devices via an IEEE 1532 JTAG interface" (SAR 34689).	1-3
	The "Specifying I/O States During Programming" section is new (SAR 34699).	1-6
	VCCPLL in Table 2-2 • Recommended Operating Conditions [1] was corrected from "1.4 to 1.6 V" to "1.425 to 1.575 V" (SAR 33851). The T_J symbol was added to the table and notes regarding T_A and T_J were removed. The second of two parameters in the VCCI and VMV row, called "3.3 V DC supply voltage," was corrected to "3.0 V DC supply voltage" (SAR 37227).	2-2
	The reference to guidelines for global spines and VersaTile rows, given in the "Global Clock Contribution—P_{CLOCK}" section, was corrected to the "Spine Architecture" section of the Global Resources chapter in the *ProASIC3E FPGA Fabric User's Guide* (SAR 34735).	2-9
	t_{DOUT} was corrected to t_{DIN} in Figure 2-3 • Input Buffer Timing Model and Delays (example) (SAR 37109).	2-13
	The typo related to the values for 3.3 V LVCMOS Wide Range in Table 2-17 • Summary of I/O Timing Characteristics—Software Default Settings was corrected (SAR 37227).	2-19
	The notes regarding drive strength in the "Summary of I/O Timing Characteristics – Default I/O Software Settings" section and "3.3 V LVCMOS Wide Range" section and tables were revised for clarification. They now state that the minimum drive strength for the default software configuration when run in wide range is ±100 µA. The drive strength displayed in software is supported in normal range only. For a detailed I/V curve, refer to the IBIS models (SAR 34763).	2-18, 2-27

Revision	Changes	Page
Revision 3 (Apr 2008) Packaging v1.2	The following pins had duplicates and the extra pins were deleted from the "PQ208" A3PE3000 table: 36, 62, 171 Note: There were no pin function changes in this update.	4-2
	The following pins had duplicates and the extra pins were deleted from the "FG324" table: E2, E3, E16, E17, P2, P3, T16, U17 Note: There were no pin function changes in this update.	4-12
	The "FG256" pin table was updated for the A3PE600 device because the old PAT were based on the IFX die, and this is the final UMC die version.	4-9
	The "FG484" was updated for the A3PE600 device because the old PAT were based on the IFX die, and this is the final UMC die version.	4-22
	The following pins had duplicates and the extra pins were deleted from the "FG896" table: AD6, AE5, AE28, AF29, F5, F26, G6, G25 Note: There were no pin function changes in this update.	4-41
Revision 2 (Mar 2008) Product Brief rev. 1	The FG324 package was added to the "ProASIC3E Product Family" table, the "I/Os Per Package1" table, and the "Temperature Grade Offerings" table for A3PE3000.	I, II, IV
Revision 1 (Feb 2008) DC and Switching Characteristics v1.1	In Table 2-3 • Flash Programming Limits – Retention, Storage and Operating Temperature 1, Maximum Operating Junction Temperature was changed from 110°C to 100°C for both commercial and industrial grades.	2
	The "PLL Behavior at Brownout Condition" section is new.	2-4
	In the "PLL Contribution—PPLL" section, the following was deleted: FCLKIN is the input clock frequency.	2-10
	In Table 2-14 • Summary of Maximum and Minimum DC Input Levels, the note was incorrect. It previously said T_J and it was corrected and changed to T_A.	2-17
	In Table 2-98 • ProASIC3E CCC/PLL Specification, the SCLK parameter and note 1 are new.	2-70
	Table 2-103 • JTAG 1532 was populated with the parameter data, which was not in the previous version of the document.	2-83
Revision 1 (cont'd) Packaging v1.1	The "PQ208" pin table for A3PE3000 was updated.	4-2
	The "FG324" pin table for A3PE3000 is new.	4-13
	The "FG484" pin table for A3PE3000 is new.	4-17
	The "FG896" pin table for A3PE3000 is new.	4-41
Revision 0 (Jan 2008)	This document was previously in datasheet v2.1. As a result of moving to the handbook format, Actel has restarted the version numbers. The new version number is 51700098-001-0.	N/A
v2.1 (July 2007)	CoreMP7 information was removed from the "Features and Benefits" section.	1-I
	The M1 device part numbers have been updated in ProASIC3E Product Family, "Packaging Tables", "Temperature Grade Offerings", "Speed Grade and Temperature Grade Matrix", and "Speed Grade and Temperature Grade Matrix".	1-I

Revision	Changes	Page
Advance v0.5 (continued)	The "I/O User Input/Output" pin description was updated to include information on what happens when the pin is unused.	2-50
	The "JTAG Pins" section was updated to include information on what happens when the pin is unused.	2-51
	The "Programming" section was updated to include information concerning serialization.	2-53
	The "JTAG 1532" section was updated to include SAMPLE/PRELOAD information.	2-54
	The "DC and Switching Characteristics" chapter was updated with new information.	Starting on page 3-1
	Table 3-6 was updated.	3-5
	In Table 3-10, PAC4 was updated.	3-8
	Table 3-19 was updated.	3-20
	The note in Table 3-24 was updated.	3-23
	All Timing Characteristics tables were updated from LVTTL to Register Delays	3-26 to 3-64
	The Timing Characteristics for RAM4K9, RAM512X18, and FIFO were updated.	3-74 to 3-79
	F_{TCKMAX} was updated in Table 3-98.	3-80
Advance v0.4 (October 2005)	The "Packaging Tables" table was updated.	ii
Advance v0.3	Figure 2-11 was updated.	2-9
	The "Clock Resources (VersaNets)" section was updated.	2-9
	The "VersaNet Global Networks and Spine Access" section was updated.	2-9
	The "PLL Macro" section was updated.	2-15
	Figure 2-27 was updated.	2-28
	Figure 2-20 was updated.	2-19
	Table 2-5 was updated.	2-25
	Table 2-6 was updated.	2-25
	The "FIFO Flag Usage Considerations" section was updated.	2-27
	Table 2-33 was updated.	2-51
	Figure 2-24 was updated.	2-31
	The "Cold-Sparing Support" section is new.	2-34
	Table 2-45 was updated.	2-64
	Table 2-48 was updated.	2-81
	Pin descriptions in the "JTAG Pins" section were updated.	2-51
	The "Pin Descriptions" section was updated.	2-50
	Table 3-7 was updated.	3-6
