Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Notes:

1. *When considering migrating your design to a lower- or higher-density device, refer to the ProASIC3E FPGA Fabric User's Guide to ensure compliance with design and board migration requirements.*
2. *Each used differential I/O pair reduces the number of single-ended I/Os available by two.*
3. *For A3PE1500 and A3PE3000 devices, the usage of certain I/O standards is limited as follows:*
   – SSTL3(I) and (II): up to 40 I/Os per north or south bank
   – LVPECL / GTL+ 3.3 V / GTL 3.3 V: up to 48 I/Os per north or south bank
   – SSTL2(I) and (II) / GTL+ 2.5 V/ GTL 2.5 V: up to 72 I/Os per north or south bank
4. *FG256 and FG484 are footprint-compatible packages.*
5. *When using voltage-referenced I/O standards, one I/O pin should be assigned as a voltage-referenced pin (VREF) per minibank (group of I/Os).*
6. *"G" indicates RoHS-compliant packages. Refer to the "ProASIC3E Ordering Information" on page III for the location of the "G" in the part number.*

Advanced Architecture

The proprietary ProASIC3E architecture provides granularity comparable to standard-cell ASICs. The ProASIC3E device consists of five distinct and programmable architectural features (Figure 1-1 on page 3):

- FPGA VersaTiles
- Dedicated FlashROM
- Dedicated SRAM/FIFO memory
- Extensive CCCs and PLLs
- Pro I/O structure

The FPGA core consists of a sea of VersaTiles. Each VersaTile can be configured as a three-input logic function, a D-flip-flop (with or without enable), or a latch by programming the appropriate flash switch interconnections. The versatility of the ProASIC3E core tile as either a three-input lookup table (LUT) equivalent or as a D-flip-flop/latch with enable allows for efficient use of the FPGA fabric. The VersaTile capability is unique to the ProASIC family of third-generation architecture Flash FPGAs. VersaTiles are connected with any of the four levels of routing hierarchy. Flash switches are distributed throughout the device to provide nonvolatile, reconfigurable interconnect programming. Maximum core utilization is possible for virtually any design.

Revision	Changes	Page
Revision 10 (continued)	"TBD" for 3.3 V LVCMOS Wide Range in Table 2-19 • I/O Output Buffer Maximum Resistances[1] and Table 2-21 • I/O Short Currents IOSH/IOSL was replaced by "Same as regular 3.3 V LVCMOS" (SAR 33853). 3.3 V LVCMOS Wide Range information was separated from regular 3.3 V LVCMOS and placed into its own new section, "3.3 V LVCMOS Wide Range". Values of IOSH and IOSL were added in Table 2-29 • Minimum and Maximum DC Input and Output Levels (SAR 33853).	2-20, 2-27
	The formulas in the table notes for Table 2-20 • I/O Weak Pull-Up/Pull-Down Resistances were corrected (SAR 34755).	2-21
	The AC Loading figures in the "Single-Ended I/O Characteristics" section were updated to match tables in the "Summary of I/O Timing Characteristics – Default I/O Software Settings" section (SAR 34889).	2-24
	The titles and subtitles for Table 2-31 • 3.3 V LVCMOS Wide Range High Slew and Table 2-32 • 3.3 V LVCMOS Wide Range Low Slew were corrected (SAR 37227).	2-28, 2-29
	The following notes were removed from Table 2-78 • LVDS Minimum and Maximum DC Input and Output Levels (SAR 34812): ±5% Differential input voltage = ±350 mV	2-50
	Minimum pulse width High and Low values were added to the tables in the "Global Tree Timing Characteristics" section. The maximum frequency for global clock parameter was removed from these tables because a frequency on the global is only an indication of what the global network can do. There are other limiters such as the SRAM, I/Os, and PLL. SmartTime software should be used to determine the design frequency (SAR 36957).	2-68
	A note was added to Table 2-98 • ProASIC3E CCC/PLL Specification indicating that when the CCC/PLL core is generated by Microsemi core generator software, not all delay values of the specified delay increments are available (SAR 34824).	2-70
	The following figures were deleted. Reference was made to a new application note, *Simultaneous Read-Write Operations in Dual-Port SRAM for Flash-Based cSoCs and FPGAs*, which covers these cases in detail (SAR 34872). Figure 2-44 • Write Access after Write onto Same Address Figure 2-45 • Read Access after Write onto Same Address Figure 2-46 • Write Access after Read onto Same Address The port names in the SRAM "Timing Waveforms", SRAM "Timing Characteristics" tables, Figure 2-49 • FIFO Reset, and the FIFO "Timing Characteristics" tables were revised to ensure consistency with the software names (SAR 35750).	2-74, 2-75, 2-79, 2-82
	The "Pin Descriptions and Packaging" chapter is new (SAR 34771).	3-1
	Package names used in the "Package Pin Assignments" section were revised to match standards given in *Package Mechanical Drawings* (SAR 34771).	4-1
	Pin E6 for the FG256 package was corrected from VvB0 to VCCIB0 (SARs 30364, 31597, 26243).	4-9
July 2010	The versioning system for datasheets has been changed. Datasheets are assigned a revision number that increments each time the datasheet is revised. The "ProASIC3E Device Status" table on page II indicates the status for each device in the device family.	N/A

Revision	Changes	Page
v2.1 (continued)	The words "ambient temperature" were added to the temperature range in the "Temperature Grade Offerings", "Speed Grade and Temperature Grade Matrix", and "Speed Grade and Temperature Grade Matrix" sections.	1-I
	The "Clock Conditioning Circuit (CCC) and PLL" section was updated.	1-I
	The caption "Main (chip)" in Figure 2-9 • Overview of Automotive ProASIC3 VersaNet Global Network was changed to "Chip (main)."	2-9
	The T_J parameter in Table 3-2 • Recommended Operating Conditions was changed to T_A, ambient temperature, and table notes 4–6 were added.	3-2
	The "PLL Macro" section was updated to add information on the VCO and PLL outputs during power-up.	2-15
v2.0 (April 2007)	In the "Temperature Grade Offerings" section, Ambient was deleted.	iii
	Ambient was deleted from "Temperature Grade Offerings".	iii
	Ambient was deleted from the "Speed Grade and Temperature Grade Matrix".	iv
	The "PLL Macro" section was updated to include power-up information.	2-15
	Table 2-13 • ProASIC3E CCC/PLL Specification was updated.	2-30
	Figure 2-19 • Peak-to-Peak Jitter Definition is new.	2-18
	The "SRAM and FIFO" section was updated with operation and timing requirement information.	2-21
	The "RESET" section was updated with read and write information.	2-25
	The "RESET" section was updated with read and write information.	2-25
	The "Introduction" in the "Advanced I/Os" section was updated to include information on input and output buffers being disabled.	2-28
	In the Table 2-15 • Levels of Hot-Swap Support, the ProASIC3 compliance descriptions were updated for levels 3 and 4.	2-34
	Table 2-45 • I/O Hot-Swap and 5 V Input Tolerance Capabilities in ProASIC3E Devices was updated.	2-64
	Notes 3, 4, and 5 were added to Table 2-17 • Comparison Table for 5 V–Compliant Receiver Scheme. 5 x 52.72 was changed to 52.7 and the Maximum current was updated from 4 x 52.7 to 5 x 52.7.	2-40
	The "VCCPLF PLL Supply Voltage" section was updated.	2-50
	The "VPUMP Programming Supply Voltage" section was updated.	2-50
	The "GL Globals" section was updated to include information about direct input into quadrant clocks.	2-51
	VJTAG was deleted from the "TCK Test Clock" section.	2-51
	In Table 2-22 • Recommended Tie-Off Values for the TCK and TRST Pins, TSK was changed to TCK in note 2. Note 3 was also updated.	2-51
	Ambient was deleted from Table 3-2 • Recommended Operating Conditions. VPUMP programming mode was changed from "3.0 to 3.6" to "3.15 to 3.45".	3-2
	Note 3 is new in Table 3-4 • Overshoot and Undershoot Limits (as measured on quiet I/Os).	3-2
	In EQ 3-2, 150 was changed to 110 and the result changed to 5.88.	3-5

Datasheet Categories

Categories

In order to provide the latest information to designers, some datasheet parameters are published before data has been fully characterized from silicon devices. The data provided for a given device, as highlighted in the "ProASIC3E Device Status" table on page II, is designated as either "Product Brief," "Advance," "Preliminary," or "Production." The definitions of these categories are as follows:

Product Brief

The product brief is a summarized version of a datasheet (advance or production) and contains general product information. This document gives an overview of specific device and family information.

Advance

This version contains initial estimated information based on simulation, other products, devices, or speed grades. This information can be used as estimates, but not for production. This label only applies to the DC and Switching Characteristics chapter of the datasheet and will only be used when the data has not been fully characterized.

Preliminary

The datasheet contains information based on simulation and/or initial characterization. The information is believed to be correct, but changes are possible.

Production

This version contains information that is considered to be final.

Export Administration Regulations (EAR)

The products described in this document are subject to the Export Administration Regulations (EAR). They could require an approved export license prior to export from the United States. An export includes release of product or disclosure of technology to a foreign national inside or outside the United States.

Safety Critical, Life Support, and High-Reliability Applications Policy

The products described in this advance status document may not have completed the Microsemi qualification process. Products may be amended or enhanced during the product introduction and qualification process, resulting in changes in device functionality or performance. It is the responsibility of each customer to ensure the fitness of any product (but especially a new product) for a particular purpose, including appropriateness for safety-critical, life-support, and other high-reliability applications. Consult the Microsemi SoC Products Group Terms and Conditions for specific liability exclusions relating to life-support applications. A reliability report covering all of the SoC Products Group's products is available at *Microsemi SoC Reliability Report*. Microsemi also offers a variety of enhanced qualification and lot acceptance screening procedures. Contact your local sales office for additional reliability information.
