

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |                                                                                                                                                                       |

Figure 3.3. EFM32JG12 Memory Map — Peripherals

#### 4.1.5.3 Current Consumption 1.8 V without DC-DC Converter

Unless otherwise indicated, typical conditions are: VREGVDD = AVDD = DVDD = 1.8 V. T<sub>OP</sub> = 25 °C. DCDC is off. Minimum and maximum values in this table represent the worst conditions across supply voltage and process variation at T<sub>OP</sub> = 25 °C.

**Table 4.7. Current Consumption 1.8 V without DC-DC Converter**

| Parameter                                                                                 | Symbol                 | Test Condition                                                        | Min | Typ  | Max | Unit   |
|-------------------------------------------------------------------------------------------|------------------------|-----------------------------------------------------------------------|-----|------|-----|--------|
| Current consumption in EM0 mode with all peripherals disabled                             | I <sub>ACTIVE</sub>    | 38.4 MHz crystal, CPU running while loop from flash <sup>1</sup>      | —   | 126  | —   | μA/MHz |
|                                                                                           |                        | 38 MHz HFRCO, CPU running Prime from flash                            | —   | 99   | —   | μA/MHz |

| Parameter                                        | Symbol              | Test Condition | Min | Typ | Max | Unit |
|--------------------------------------------------|---------------------|----------------|-----|-----|-----|------|
| SCL clock frequency <sup>2</sup>                 | f <sub>SCL</sub>    |                | 0   | —   | 400 | kHz  |
| SCL clock low time                               | t <sub>LOW</sub>    |                | 1.3 | —   | —   | μs   |
| SCL clock high time                              | t <sub>HIGH</sub>   |                | 0.6 | —   | —   | μs   |
| SDA set-up time                                  | t <sub>SU_DAT</sub> |                | 100 | —   | —   | ns   |
| SDA hold time <sup>3</sup>                       | t <sub>HD_DAT</sub> |                | 100 | —   | 900 | ns   |
| Repeated START condition set-up time             | t <sub>SU_STA</sub> |                | 0.6 | —   | —   | μs   |
| (Repeated) START condition hold time             | t <sub>HD_STA</sub> |                | 0.6 | —   | —   | μs   |
| STOP condition set-up time                       | t <sub>SU_STO</sub> |                | 0.6 | —   | —   | μs   |
| Bus free time between a STOP and START condition | t <sub>BUF</sub>    |                | 1.3 | —   | —   | μs   |

**Note:**

1. For CLHR set to 1 in the I2Cn\_CTRL register.
2. For the minimum HPERCLK frequency required in Fast-mode, refer to the I2C chapter in the reference manual.
3. The maximum SDA hold time (t<sub>HD,DAT</sub>) needs to be met only when the device does not stretch the low time of SCL (t<sub>LOW</sub>).

**Figure 4.4. EM1 Sleep Mode Typical Supply Current vs. Temperature**

Typical supply current for EM2, EM3 and EM4H using standard software libraries from Silicon Laboratories.

### 6.3 Alternate Functionality Overview

A wide selection of alternate functionality is available for multiplexing to various pins. The following table shows the name of the alternate functionality in the first column, followed by columns showing the possible LOCATION bitfield settings.

**Note:** Some functionality, such as analog interfaces, do not have alternate settings or a LOCATION bitfield. In these cases, the pinout is shown in the column corresponding to LOCATION 0.

**Table 6.5. Alternate Functionality Overview**

| Alternate     | LOCATION                               |                                        |                                           |                                           |                                             |                                              |                                          |                                          |                                                                               |

## 9. Revision History

### 9.1 Revision 0.5

2017-02-10

- Updated Feature List and Front Page with latest characterization numbers.
- List of OPNs in Ordering Table consolidated.
- Electrical Characteristics Table Changes
  - All specification tables updated with latest characterization data and production test limits.
  - Split HFRCO/AUXHFRCO table into separate tables for HFRCO and AUXHFRCO.
  - OPAMP, CSEN, and VDAC specification line items updated to match test conditions.
  - Added tables for Analog Port (APORT) and Pulse Counter (PCNT).
- Added Typical Performance Curves for supply current and DCDC parameters.
- Added APORT Connection Diagram.

### 9.2 Revision 0.2

December 9th, 2016

Initial release.

|           |                                                   |           |
|-----------|---------------------------------------------------|-----------|
| 3.10.2    | Memory System Controller (MSC)                    | 9         |
| 3.10.3    | Linked Direct Memory Access Controller (LDMA)     | 9         |
| 3.11      | Memory Map                                        | 10        |
| 3.12      | Configuration Summary                             | 12        |
| <b>4.</b> | <b>Electrical Specifications</b>                  | <b>13</b> |
| 4.1       | Electrical Characteristics                        | 13        |
| 4.1.1     | Absolute Maximum Ratings                          | 13        |
| 4.1.2     | Operating Conditions                              | 14        |
| 4.1.2.1   | General Operating Conditions                      | 14        |
| 4.1.3     | Thermal Characteristics                           | 15        |
| 4.1.4     | DC-DC Converter                                   | 16        |
| 4.1.5     | Current Consumption                               | 18        |
| 4.1.5.1   | Current Consumption 3.3 V without DC-DC Converter | 18        |
| 4.1.5.2   | Current Consumption 3.3 V using DC-DC Converter   | 20        |
| 4.1.5.3   | Current Consumption 1.8 V without DC-DC Converter | 22        |
| 4.1.6     | Wake Up Times                                     | 23        |
| 4.1.7     | Brown Out Detector (BOD)                          | 24        |
| 4.1.8     | Oscillators                                       | 25        |
| 4.1.8.1   | Low-Frequency Crystal Oscillator (LFXO)           | 25        |
| 4.1.8.2   | High-Frequency Crystal Oscillator (HFXO)          | 26        |
| 4.1.8.3   | Low-Frequency RC Oscillator (LFRCO)               | 26        |
| 4.1.8.4   | High-Frequency RC Oscillator (HFRCO)              | 27        |
| 4.1.8.5   | Auxiliary High-Frequency RC Oscillator (AUXHFRCO) | 28        |
| 4.1.8.6   | Ultra-low Frequency RC Oscillator (ULFRCO)        | 28        |
| 4.1.9     | Flash Memory Characteristics                      | 29        |
| 4.1.10    | General-Purpose I/O (GPIO)                        | 30        |
| 4.1.11    | Voltage Monitor (VMON)                            | 32        |
| 4.1.12    | Analog to Digital Converter (ADC)                 | 33        |
| 4.1.13    | Analog Comparator (ACMP)                          | 35        |
| 4.1.14    | Digital to Analog Converter (VDAC)                | 38        |
| 4.1.15    | Current Digital to Analog Converter (IDAC)        | 40        |
| 4.1.16    | Capacitive Sense (CSEN)                           | 42        |
| 4.1.17    | Operational Amplifier (OPAMP)                     | 43        |
| 4.1.18    | Pulse Counter (PCNT)                              | 46        |
| 4.1.19    | Analog Port (APORT)                               | 46        |
| 4.1.20    | I2C                                               | 47        |
| 4.1.20.1  | I2C Standard-mode (Sm)                            | 47        |
| 4.1.20.2  | I2C Fast-mode (Fm)                                | 48        |
| 4.1.20.3  | I2C Fast-mode Plus (Fm+)                          | 49        |
| 4.1.21    | USART SPI                                         | 50        |
| 4.2       | Typical Performance Curves                        | 51        |
| 4.2.1     | Supply Current                                    | 52        |
| 4.2.2     | DC-DC Converter                                   | 57        |
| <b>5.</b> | <b>Typical Connection Diagrams</b>                | <b>59</b> |
| 5.1       | Power                                             | 59        |
| 5.2       | Other Connections                                 | 59        |
