Infineon Technologies - MB96F656RBPMC-GSE1 Datasheet

Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Obsolete
Core Processor	F²MC-16FX
Core Size	16-Bit
Speed	32MHz
Connectivity	CANbus, I²C, LINbus, SCI, UART/USART
Peripherals	DMA, LVD, POR, PWM, WDT
Number of I/O	101
Program Memory Size	288KB (288K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	24K x 8
Voltage - Supply (Vcc/Vdd)	2.7V ~ 5.5V
Data Converters	A/D 29x8/10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 125°C (TA)
Mounting Type	Surface Mount
Package / Case	120-LQFP
Supplier Device Package	120-LQFP (16x16)
Purchase URL	https://www.e-xfl.com/product-detail/infineon-technologies/mb96f656rbpmc-gse1

Non Maskable Interrupt

- Disabled after reset, can be enabled by Boot-ROM depending on ROM configuration block
- Once enabled, can not be disabled other than by reset
- High or Low level sensitive
- Pin shared with external interrupt 0

I/O Ports

- Most of the external pins can be used as general purpose I/O
- All push-pull outputs (except when used as I^2C SDA/SCL line)
- Bit-wise programmable as input/output or peripheral signal
- Bit-wise programmable input enable
- One input level per GPIO-pin (either Automotive or CMOS hysteresis)
- Bit-wise programmable pull-up resistor

Built-in On Chip Debugger (OCD)

- One-wire debug tool interface
- Break function:
  - Hardware break: 6 points (shared with code event)
  - -Software break: 4096 points
- Event function
  - Code event: 6 points (shared with hardware break)
  - -Data event: 6 points
  - Event sequencer: 2 levels + reset
- Execution time measurement function
- Trace function: 42 branches
- Security function

Flash Memory

- Dual operation flash allowing reading of one Flash bank while programming or erasing the other bank
- Command sequencer for automatic execution of programming algorithm and for supporting DMA for programming of the Flash Memory
- Supports automatic programming, Embedded Algorithm
- Write/Erase/Erase-Suspend/Resume commands
- A flag indicating completion of the automatic algorithm
- Erase can be performed on each sector individually
- Sector protection
- Flash Security feature to protect the content of the Flash
- Low voltage detection during Flash erase or write

Pin name	Feature	Description
TOTn	Reload Timer	Reload Timer n output pin
TOTn_R	Reload Timer	Relocated Reload Timer n output pin
TTGn	PPG	Programmable Pulse Generator n trigger input pin
TXn	CAN	CAN interface n TX output pin
Vcc	Supply	Power supply pin
Vss	Supply	Power supply pin
WOT	RTC	Real Time clock output pin
WOT_R	RTC	Relocated Real Time clock output pin
X0	Clock	Oscillator input pin
X0A	Clock	Subclock Oscillator input pin
X1	Clock	Oscillator output pin
X1A	Clock	Subclock Oscillator output pin
ZINn	QPRC	Quadrature Position/Revolution Counter Unit n input pin

Pin no.	I/O circuit type*	Pin name
76	H	P11_5 / PPG4_R
77	H	P11_6 / FRCK0_R / ZIN1
78	H	P11_7 / IN0_R / AIN1
79	H	P12_0 / IN1_R / BIN1
80	H	P12_1 / TIN1_R / PPG0_B
81	H	P12_2 / TOT1_R / PPG1_B
82	H	P12_3 / OUT2_R
83	H	P12_4 / OUT3_R
84	H	P12_5 / TIN2_R / PPG2_B
85	H	P12_6 / TOT2_R / PPG3_B
86	H	P12_7 / INT1_R
87	H	P00_0 / INT3_R / FRCK2
88	H	P00_1 / INT4_R
89	H	P00_2 / INT5_R
90	Supply	Vcc
91	Supply	Vss
92	H	P00_3 / INT6_R / PPG8_B
93	H	P00_4 / INT7_R / PPG9_B
94	H	P00_5 / IN6 / TTG2 / TTG6 / PPG10_B
95	H	P00_6 / IN7 / TTG3 / TTG7 / PPG11_B
96	H	P00_7 / INT14
97	M	P01_0 / SCK7
98	H	P01_1 / CKOT1 / OUT0 / SOT7
99	M	P01_2 / CKOTX1 / OUT1 / INT15 / SIN7
100	H	P01_3 / PPG5
101	M	P01_4 / SIN4 / INT8
102	H	P01_5 / SOT4
103	M	P01_6 / SCK4 / TTG12
104	M	P01_7 / CKOTX1_R / INT9 / TTG13 / ZIN0 / SCK7_R
105	H	P02_0 / CKOT1_R / INT10 / TTG14 / AIN0 / SOT7_R
106	H	P02_1 / IN6_R / TTG15
107	M	P02_2 / IN7_R / CKOT0_R / INT12 / BIN0 / SIN7_R
108	H	P02_3 / PPG12_B
109	H	P02_4 / PPG13_B
110	M	P02_5 / OUT0_R / INT13 / SIN5_R
111	H	P02_6 / OUT1_R
112	H	P02_7 / PPG5_R
113	H	P03_0 / PPG4_B
114	H	P03_1 / PPG5_B

10. Serial Programming Communication Interface

USART pins for Flash serial programming (MD = 0, DEBUG I/F = 0, Serial Communication mode)

MB96650		
Pin Number	**USART Number**	**Normal Function**
8	USART0	SIN0
9		SOT0
10		SCK0
3	USART1	SIN1
4		SOT1
5		SCK1
56	USART2	SIN2
57		SOT2
58		SCK2
101	USART4	SIN4
102		SOT4
103		SCK4

12. Handling Precautions

Any semiconductor devices have inherently a certain rate of failure. The possibility of failure is greatly affected by the conditions in which they are used (circuit conditions, environmental conditions, etc.). This page describes precautions that must be observed to minimize the chance of failure and to obtain higher reliability from your Spansion semiconductor devices.

12.1 Precautions for Product Design

This section describes precautions when designing electronic equipment using semiconductor devices.

■Absolute Maximum Ratings

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of certain established limits, called absolute maximum ratings. Do not exceed these ratings.

■Recommended Operating Conditions

Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their sales representative beforehand.

■Processing and Protection of Pins

These precautions must be followed when handling the pins which connect semiconductor devices to power supply and input/output functions.

(1) Preventing Over-Voltage and Over-Current Conditions

Exposure to voltage or current levels in excess of maximum ratings at any pin is likely to cause deterioration within the device, and in extreme cases leads to permanent damage of the device. Try to prevent such overvoltage or over-current conditions at the design stage.

(2) Protection of Output Pins

Shorting of output pins to supply pins or other output pins, or connection to large capacitance can cause large current flows. Such conditions if present for extended periods of time can damage the device.
Therefore, avoid this type of connection.

(3) Handling of Unused Input Pins

Unconnected input pins with very high impedance levels can adversely affect stability of operation. Such pins should be connected through an appropriate resistance to a power supply pin or ground pin.

■Latch-up

Semiconductor devices are constructed by the formation of P-type and N-type areas on a substrate. When subjected to abnormally high voltages, internal parasitic PNPN junctions (called thyristor structures) may be formed, causing large current levels in excess of several hundred mA to flow continuously at the power supply pin. This condition is called latch-up.

CAUTION: The occurrence of latch-up not only causes loss of reliability in the semiconductor device, but can cause injury or damage from high heat, smoke or flame. To prevent this from happening, do the following:

(1) Be sure that voltages applied to pins do not exceed the absolute maximum ratings. This should include attention to abnormal noise, surge levels, etc.

(2) Be sure that abnormal current flows do not occur during the power-on sequence.

■Observance of Safety Regulations and Standards

Most countries in the world have established standards and regulations regarding safety, protection from electromagnetic interference, etc. Customers are requested to observe applicable regulations and standards in the design of products.

■Fail-Safe Design

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

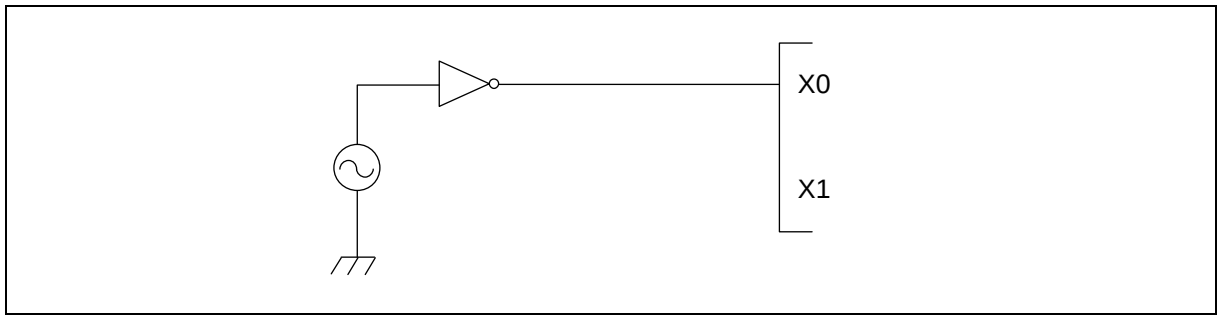
3. External clock usage

The permitted frequency range of an external clock depends on the oscillator type and configuration.

See AC Characteristics for detailed modes and frequency limits. Single and opposite phase external clocks must be connected as follows:

(1) Single phase external clock for Main oscillator

When using a single phase external clock for the Main oscillator, X0 pin must be driven and X1 pin left open. And supply 1.8V power to the external clock.

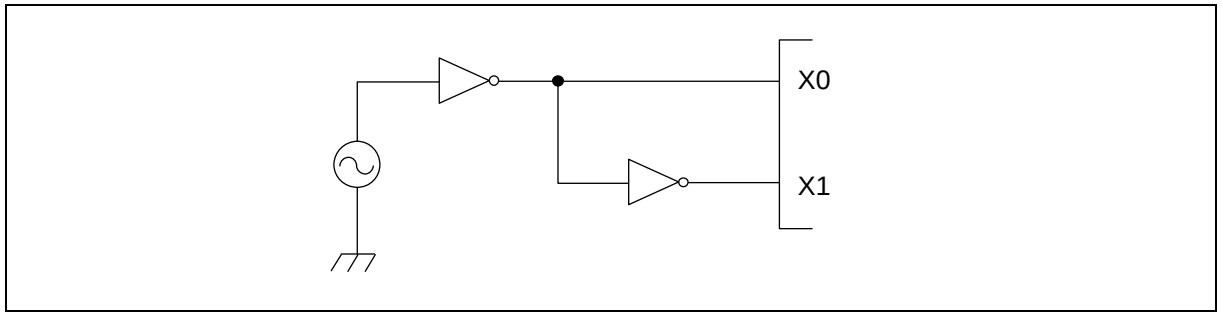


(2) Single phase external clock for Sub oscillator

When using a single phase external clock for the Sub oscillator, “External clock mode” must be selected and X0A/P04_0 pin must be driven. X1A/P04_1 pin can be configured as GPIO.

(3) Opposite phase external clock

When using an opposite phase external clock, X1 (X1A) pins must be supplied with a clock signal which has the opposite phase to the X0 (X0A) pins. Supply level on X0 and X1 pins must be 1.8V.



4. Notes on PLL clock mode operation

If the microcontroller is operated with PLL clock mode and no external oscillator is operating or no external clock is supplied, the microcontroller attempts to work with the free oscillating PLL. Performance of this operation, however, cannot be guaranteed.

5. Power supply pins (Vcc/Vss)

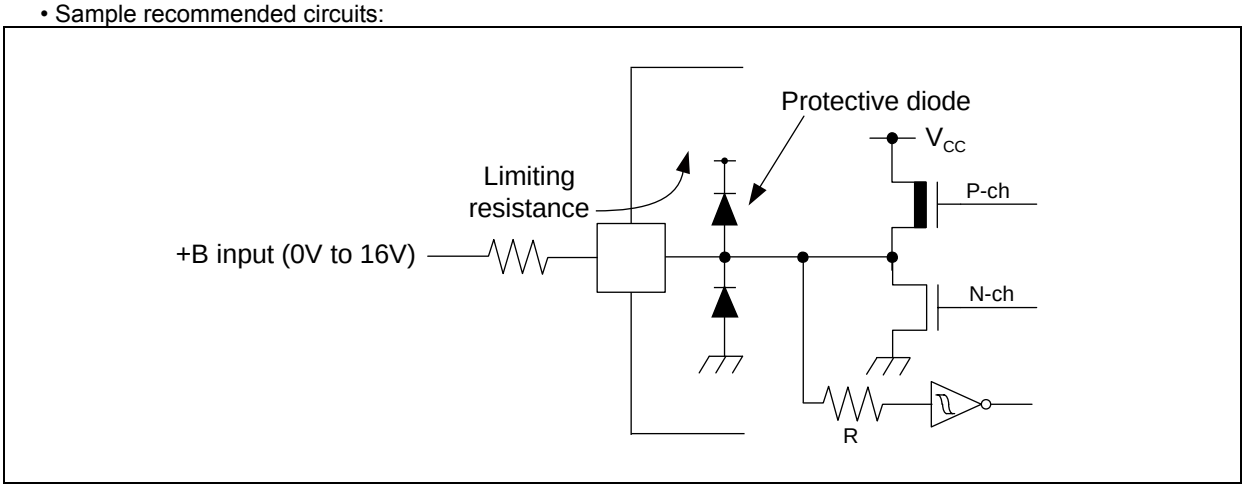
It is required that all V_{CC}-level as well as all V_{SS}-level power supply pins are at the same potential. If there is more than one V_{CC} or V_{SS} level, the device may operate incorrectly or be damaged even within the guaranteed operating range.

Vcc and Vss pins must be connected to the device from the power supply with lowest possible impedance.

The smoothing capacitor at Vcc pin must use the one of a capacity value that is larger than Cs.

Besides this, as a measure against power supply noise, it is required to connect a bypass capacitor of about 0.1μF between Vcc and Vss pins as close as possible to Vcc and Vss pins.

• Sample recommended circuits:



*5: The maximum permitted power dissipation depends on the ambient temperature, the air flow velocity and the thermal conductance of the package on the PCB.
The actual power dissipation depends on the customer application and can be calculated as follows:
$P_D = P_{IO} + P_{INT}$

$P_{IO} = \Sigma (V_{OL} \times I_{OL} + V_{OH} \times I_{OH})$ (I/O load power dissipation, sum is performed on all I/O ports)

$P_{INT} = V_{CC} \times (I_{CC} + I_A)$ (internal power dissipation)

I_{CC} is the total core current consumption into V_{CC} as described in the “DC characteristics” and depends on the selected operation mode and clock frequency and the usage of functions like Flash programming.
I_A is the analog current consumption into AV_{CC}.
*6: Worst case value for a package mounted on single layer PCB at specified T_A without air flow.
*7: Write/erase to a large sector in flash memory is warranted with $T_A \leq +105°C$.

WARNING

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

14.3 DC Characteristics

14.3.1 Current Rating

(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

	V_{ILX0AS}	X0A	External clock in "Oscillation mode"	V_{SS} - 0.3	-	V_{CC} × 0.2	V	
	V_{ILR}	RSTX	-	V_{SS} - 0.3	-	V_{CC} × 0.2	V	CMOS Hysteresis input
	V_{ILM}	MD	-	V_{SS} - 0.3	-	V_{SS} + 0.3	V	CMOS Hysteresis input
	V_{ILD}	DEBUG I/F	-	V_{SS} - 0.3	-	0.8	V	TTL Input

14.4.3 Built-in RC Oscillation Characteristics

(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Clock frequency	f_{RC}	50	100	200	kHz	When using slow frequency of RC oscillator
		1	2	4	MHz	When using fast frequency of RC oscillator
RC clock stabilization time	t_{RCSTAB}	80	160	320	µs	When using slow frequency of RC oscillator (16 RC clock cycles)
		64	128	256	µs	When using fast frequency of RC oscillator (256 RC clock cycles)

14.4.4 Internal Clock Timing

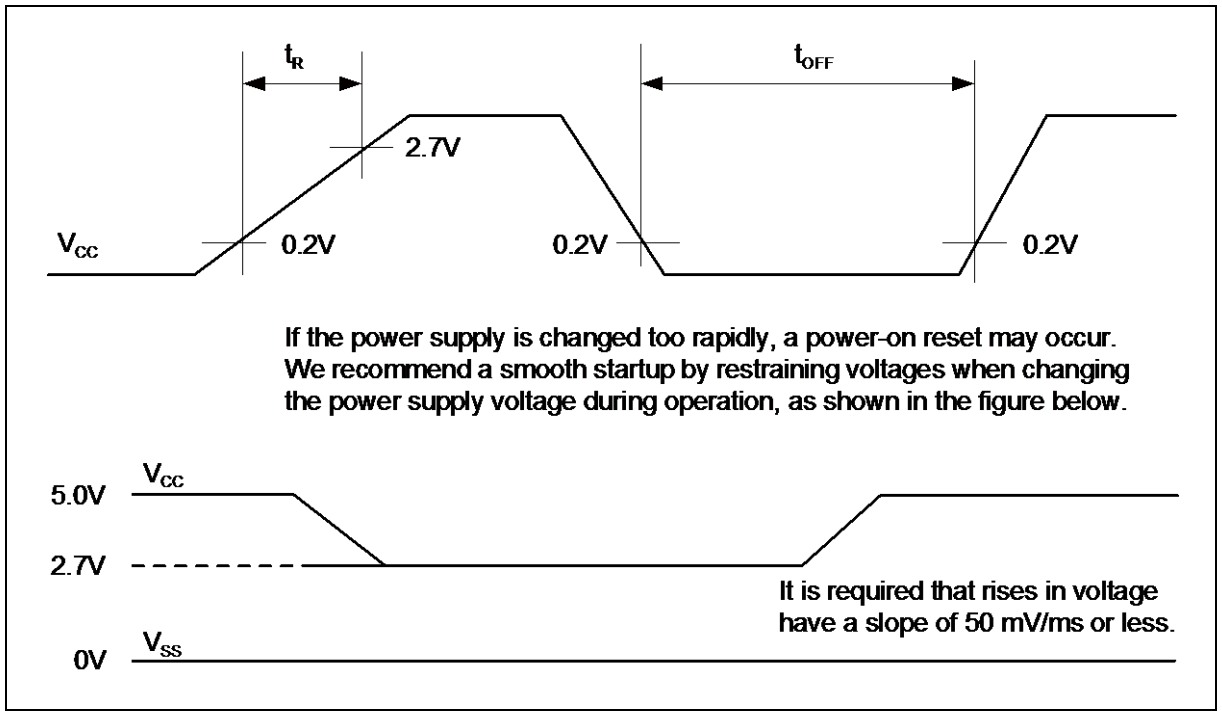
(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

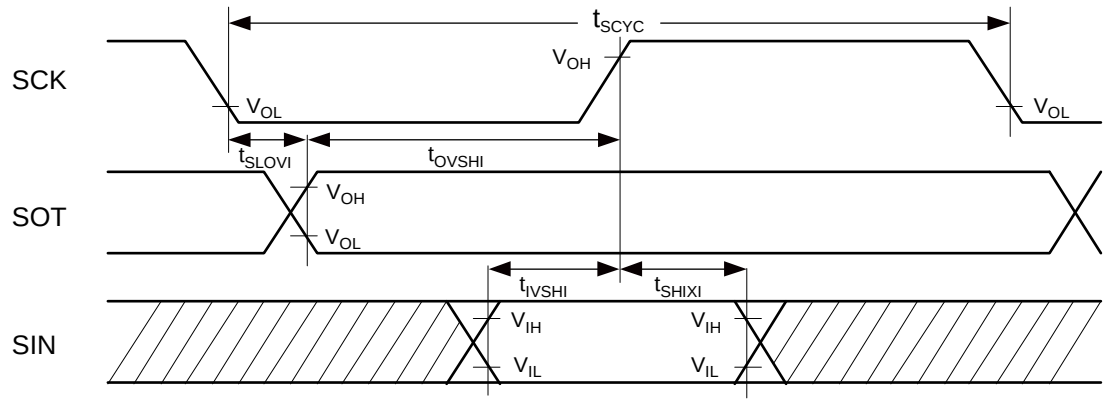
Parameter	Symbol	Value		Unit
		Min	Max	
Internal System clock frequency (CLKS1 and CLKS2)	f_{CLKS1}, f_{CLKS2}	-	54	MHz
Internal CPU clock frequency (CLKB), Internal peripheral clock frequency (CLKP1)	f_{CLKB}, f_{CLKP1}	-	32	MHz
Internal peripheral clock frequency (CLKP2)	f_{CLKP2}	-	32	MHz

14.4.7 Power-on Reset Timing

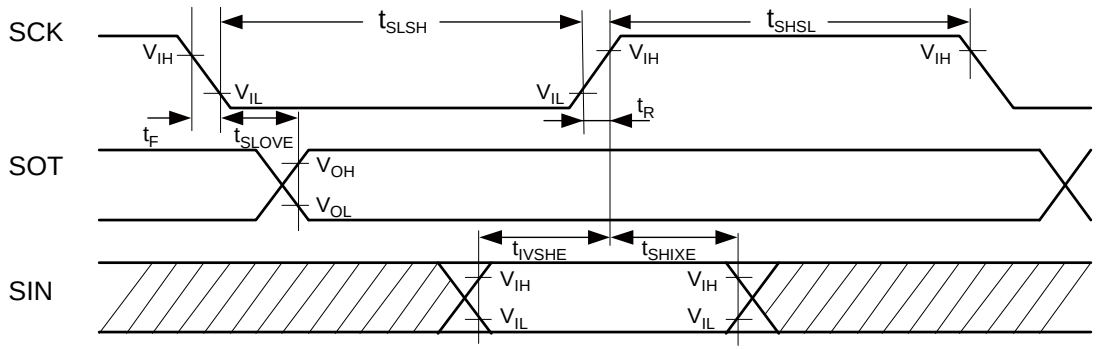
(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

Parameter	Symbol	Pin name	Value			Unit
			Min	Typ	Max	
Power on rise time	t_R	Vcc	0.05	-	30	ms
Power off time	t_{OFF}	Vcc	1	-	-	ms





Internal shift clock mode



External shift clock mode

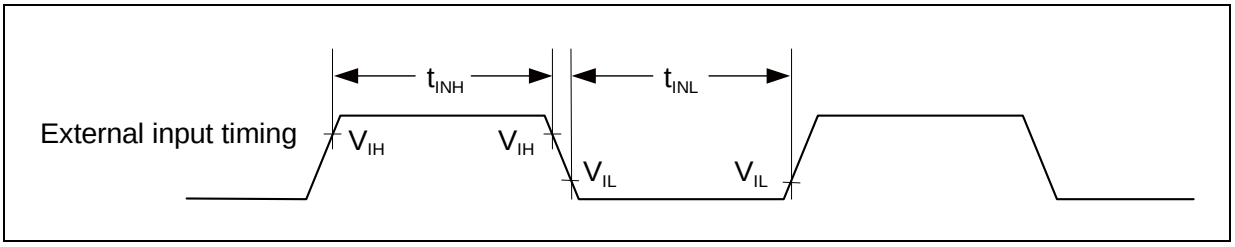
14.4.9 External Input Timing

(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Input pulse width	t_{INH}, t_{INL}	Pnn_m	$2t_{CLKP1}$ +200 (t_{CLKP1}= $1/f_{CLKP1}$)*	-	ns	General Purpose I/O
		ADTG				A/D Converter trigger input
		TINn, TINn_R				Reload Timer
		TTGn				PPG trigger input
		FRCKn, FRCKn_R				Free-Running Timer input clock
		INn, INn_R				Input Capture
		AINn, BINn, ZINn				Quadrature Position/Revolution Counter
		INTn, INTn_R	200	-	ns	External Interrupt
		NMI				Non-Maskable Interrupt

*: t_{CLKP1} indicates the peripheral clock1 (CLKP1) cycle time except stop when in stop mode.



14.7 Flash Memory Write/Erase Characteristics

(V_{CC} = AV_{CC} = 2.7V to 5.5V, V_{SS} = AV_{SS} = 0V, T_A = - 40°C to + 125°C)

Parameter		Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Sector erase time	Large Sector	$T_A \leq$ + 105°C	-	1.6	7.5	s	Includes write time prior to internal erase.
	Small Sector	-	-	0.4	2.1	s	
	Security Sector	-	-	0.31	1.65	s	
Word (16-bit) write time	Large Sector	$T_A \leq$ + 105°C	-	25	400	µs	Not including system-level overhead time.
	Small Sector	-	-	25	400	µs	
Chip erase time		$T_A \leq$ + 105°C	-	11.51	55.05	s	Includes write time prior to internal erase.

Note: While the Flash memory is written or erased, shutdown of the external power (V_{CC}) is prohibited. In the application system where the external power (V_{CC}) might be shut down while writing or erasing, be sure to turn the power off by using a low voltage detection function.
To put it concrete, change the external power in the range of change ration of power supply voltage (-0.004V/µs to +0.004V/µs) after the external power falls below the detection voltage (V_{DLX})*1.

Write/Erase cycles and data hold time

Write/Erase cycles (cycle)	Data hold time (year)
1,000	20 *2
10,000	10 *2
100,000	5 *2

*1: See "6. Low Voltage Detection Function Characteristics".

*2: This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at + 85°C).
