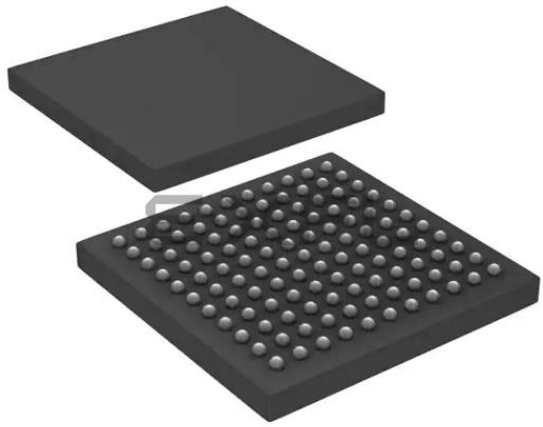
Microchip Technology - PIC32MX440F128L-80I/BG Datasheet



Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	MIPS32® M4K™
Core Size	32-Bit Single-Core
Speed	80MHz
Connectivity	I²C, IrDA, LINbus, PMP, SPI, UART/USART, USB OTG
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	-
Program Memory Size	128KB (128K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	32K x 8
Voltage - Supply (Vcc/Vdd)	2.3V ~ 3.6V
Data Converters	A/D 16x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	121-TFBGA
Supplier Device Package	121-TFBGA (10x10)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/pic32mx440f128l-80i-bg

T1CK	48	74	B11	I	ST	Timer1 external clock input.
T2CK	—	6	D1	I	ST	Timer2 external clock input.
T3CK	—	7	E4	I	ST	Timer3 external clock input.
T4CK	—	8	E2	I	ST	Timer4 external clock input.
T5CK	—	9	E1	I	ST	Timer5 external clock input.
$\overline{U1CTS}$	43	47	L9	I	ST	UART1 clear to send.
$\overline{U1RTS}$	35, 49	48	K9	O	—	UART1 ready to send.
U1RX	34, 50	52	K11	I	ST	UART1 receive.
U1TX	33, 51	51, 53	J10, K10	O	—	UART1 transmit.
$\overline{U2CTS}$	21	40	K6	I	ST	UART2 clear to send.
$\overline{U2RTS}$	29	39	L6	O	—	UART2 ready to send.
U2RX	31	49	L10	I	ST	UART2 receive.
U2TX	32	50	L11	O	—	UART2 transmit.
SCK1	35	55, 70	D11, H9	I/O	ST	Synchronous serial clock input/output for SPI1.
SDI1	34	9, 54	E1, H8	I	ST	SPI1 data in.
SDO1	33	53, 72	D9, J10	O	—	SPI1 data out.
$\overline{SS1}$	14	23, 69	E10, J2	I/O	ST	SPI1 slave synchronization or frame pulse I/O.
SCK2	4	10	E3	I/O	ST	Synchronous serial clock input/output for SPI2.
SDI2	5	11	F4	I	ST	SPI2 data in.
SDO2	6	12	F2	O	—	SPI2 data out.
$\overline{SS2}$	8	14	F3	I/O	ST	SPI2 slave synchronization or frame pulse I/O.
SCL1	37, 44	57, 66	E11, H10	I/O	ST	Synchronous serial clock input/output for I2C1.
SDA1	36, 43	56, 67	E8, J11	I/O	ST	Synchronous serial data input/output for I2C1.
SCL2	32	58	H11	I/O	ST	Synchronous serial clock input/output for I2C2.
SDA2	31	59	G10	I/O	ST	Synchronous serial data input/output for I2C2.

Legend: CMOS = CMOS compatible input or output; Analog = Analog input; P = Power
ST = Schmitt Trigger input with CMOS levels; O = Output; I = Input
TTL = TTL input buffer

Note 1: Pin numbers are provided for reference only. See the **"Pin Diagrams"** section for device pin availability.

2.0 GUIDELINES FOR GETTING STARTED WITH 32-BIT MICROCONTROLLERS

Note 1: This data sheet summarizes the features of the PIC32MX3XX/4XX family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

2: Some registers and associated bits described in this section may not be available on all devices. Refer to **Section 4.0 "Memory Organization"** in this data sheet for device-specific register and bit information.

2.1 Basic Connection Requirements

Getting started with the PIC32MX3XX/4XX family of 32-bit Microcontrollers (MCUs) requires attention to a minimal set of device pin connections before proceeding with development. The following is a list of pin names, which must always be connected:

- All VDD and VSS pins
  (see **Section 2.2 "Decoupling Capacitors"**)
- All AVDD and AVSS pins (regardless if ADC module is not used)
  (see **Section 2.2 "Decoupling Capacitors"**)
- VCAP/VCORE
  (see **Section 2.3 "Capacitor on Internal Voltage Regulator (VCAP/VCORE)"**)
- $\overline{\text{MCLR}}$ pin
  (see **Section 2.4 "Master Clear (MCLR) Pin"**)
- PGECx/PGEDx pins used for In-Circuit Serial Programming™ (ICSP™) and debugging purposes
  (see **Section 2.5 "ICSP Pins"**)
- OSC1 and OSC2 pins when external oscillator source is used
  (see **Section 2.8 "External Oscillator Pins"**)

Additionally, the following pins may be required:

- VREF+/VREF- pins used when external voltage reference for ADC module is implemented

Note: The AVDD and AVSS pins must be connected independent of ADC use and ADC voltage reference source.

2.2 Decoupling Capacitors

The use of decoupling capacitors on every pair of power supply pins, such as VDD, VSS, AVDD and AVSS is required. See Figure 2-1.

Consider the following criteria when using decoupling capacitors:

- **Value and type of capacitor:** Recommendation of 0.1 µF (100 nF), 10-20V. This capacitor should be a low-ESR and have resonance frequency in the range of 20 MHz and higher. It is recommended that ceramic capacitors be used.
- **Placement on the printed circuit board:** The decoupling capacitors should be placed as close to the pins as possible. It is recommended to place the capacitors on the same side of the board as the device. If space is constricted, the capacitor can be placed on another layer on the PCB using a via; however, ensure that the trace length from the pin to the capacitor is within one-quarter inch (6 mm) in length.
- **Handling high frequency noise:** If the board is experiencing high frequency noise, upward of tens of MHz, add a second ceramic-type capacitor in parallel to the above described decoupling capacitor. The value of the second capacitor can be in the range of 0.01 µF to 0.001 µF. Place this second capacitor next to the primary decoupling capacitor. In high-speed circuit designs, consider implementing a decade pair of capacitances as close to the power and ground pins as possible. For example, 0.1 µF in parallel with 0.001 µF.
- **Maximizing performance:** On the board layout from the power supply circuit, run the power and return traces to the decoupling capacitors first, and then to the device pins. This ensures that the decoupling capacitors are first in the power chain. Equally important is to keep the trace length between the capacitor and the power pins to a minimum thereby reducing PCB track inductance.

2.5 ICSP Pins

The PGECx and PGEDx pins are used for In-Circuit Serial Programming™ (ICSP™) and debugging purposes. It is recommended to keep the trace length between the ICSP connector and the ICSP pins on the device as short as possible. If the ICSP connector is expected to experience an ESD event, a series resistor is recommended, with the value in the range of a few tens of Ohms, not to exceed 100 Ohms.

Pull-up resistors, series diodes and capacitors on the PGECx and PGEDx pins are not recommended as they will interfere with the programmer/debugger communications to the device. If such discrete components are an application requirement, they should be removed from the circuit during programming and debugging. Alternately, refer to the AC/DC characteristics and timing requirements information in the respective device Flash programming specification for information on capacitive loading limits and pin input voltage high (V_{IH}) and input low (V_{IL}) requirements.

Ensure that the "Communication Channel Select" (i.e., PGECx/PGEDx pins) programmed into the device matches the physical connections for the ICSP to MPLAB® ICD 2, MPLAB ICD 3 or MPLAB REAL ICE™.

For more information on ICD 2, ICD 3 and REAL ICE connection requirements, refer to the following documents that are available on the Microchip web site.

- *"MPLAB® ICD 2 In-Circuit Debugger User's Guide"* DS51331
- *"Using MPLAB® ICD 2"* (poster) DS51265
- *"MPLAB® ICD 2 Design Advisory"* DS51566
- *"Using MPLAB® ICD 3"* (poster) DS51765
- *"MPLAB® ICD 3 Design Advisory"* DS51764
- *"MPLAB® REAL ICE™ In-Circuit Debugger User's Guide"* DS51616
- *"Using MPLAB® REAL ICE™"* (poster) DS51749

2.6 JTAG

The TMS, TDO, TDI and TCK pins are used for testing and debugging according to the Joint Test Action Group (JTAG) standard. It is recommended to keep the trace length between the JTAG connector and the JTAG pins on the device as short as possible. If the JTAG connector is expected to experience an ESD event, a series resistor is recommended, with the value in the range of a few tens of Ohms, not to exceed 100 Ohms.

Pull-up resistors, series diodes and capacitors on the TMS, TDO, TDI and TCK pins are not recommended as they will interfere with the programmer/debugger communications to the device. If such discrete components are an application requirement, they should be removed from the circuit during programming and debugging. Alternately, refer to the AC/DC characteristics and timing requirements information in the respective device Flash programming specification for information on capacitive loading limits and pin input voltage high (V_{IH}) and input low (V_{IL}) requirements.

2.7 Trace

The trace pins can be connected to a hardware-trace-enabled programmer to provide a compress real time instruction trace. When used for trace the TRD3, TRD2, TRD1, TRD0 and TRCLK pins should be dedicated for this use. The trace hardware requires a 22 Ohm series resistor between the trace pins and the trace connector.

2.8 External Oscillator Pins

Many MCUs have options for at least two oscillators: a high-frequency primary oscillator and a low-frequency secondary oscillator (refer to **Section 8.0 "Oscillator Configuration"** for details).

The oscillator circuit should be placed on the same side of the board as the device. Also, place the oscillator circuit close to the respective oscillator pins, not exceeding one-half inch (12 mm) distance between them. The load capacitors should be placed next to the oscillator itself, on the same side of the board. Use a grounded copper pour around the oscillator circuit to isolate them from surrounding circuits. The grounded copper pour should be routed directly to the MCU ground. Do not run any signal traces or power traces inside the ground pour. Also, if using a two-sided board, avoid any traces on the other side of the board where the crystal is placed. A suggested layout is illustrated in Figure 2-3.

FIGURE 2-3: SUGGESTED PLACEMENT OF THE OSCILLATOR CIRCUIT

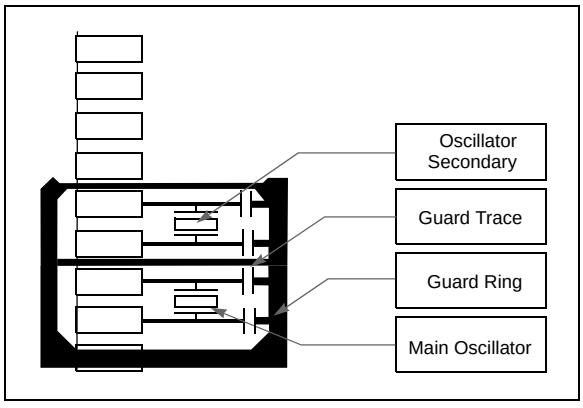

FIGURE 4-3: MEMORY MAP ON RESET FOR PIC32MX320F128H AND PIC32MX320F128L DEVICES(1)

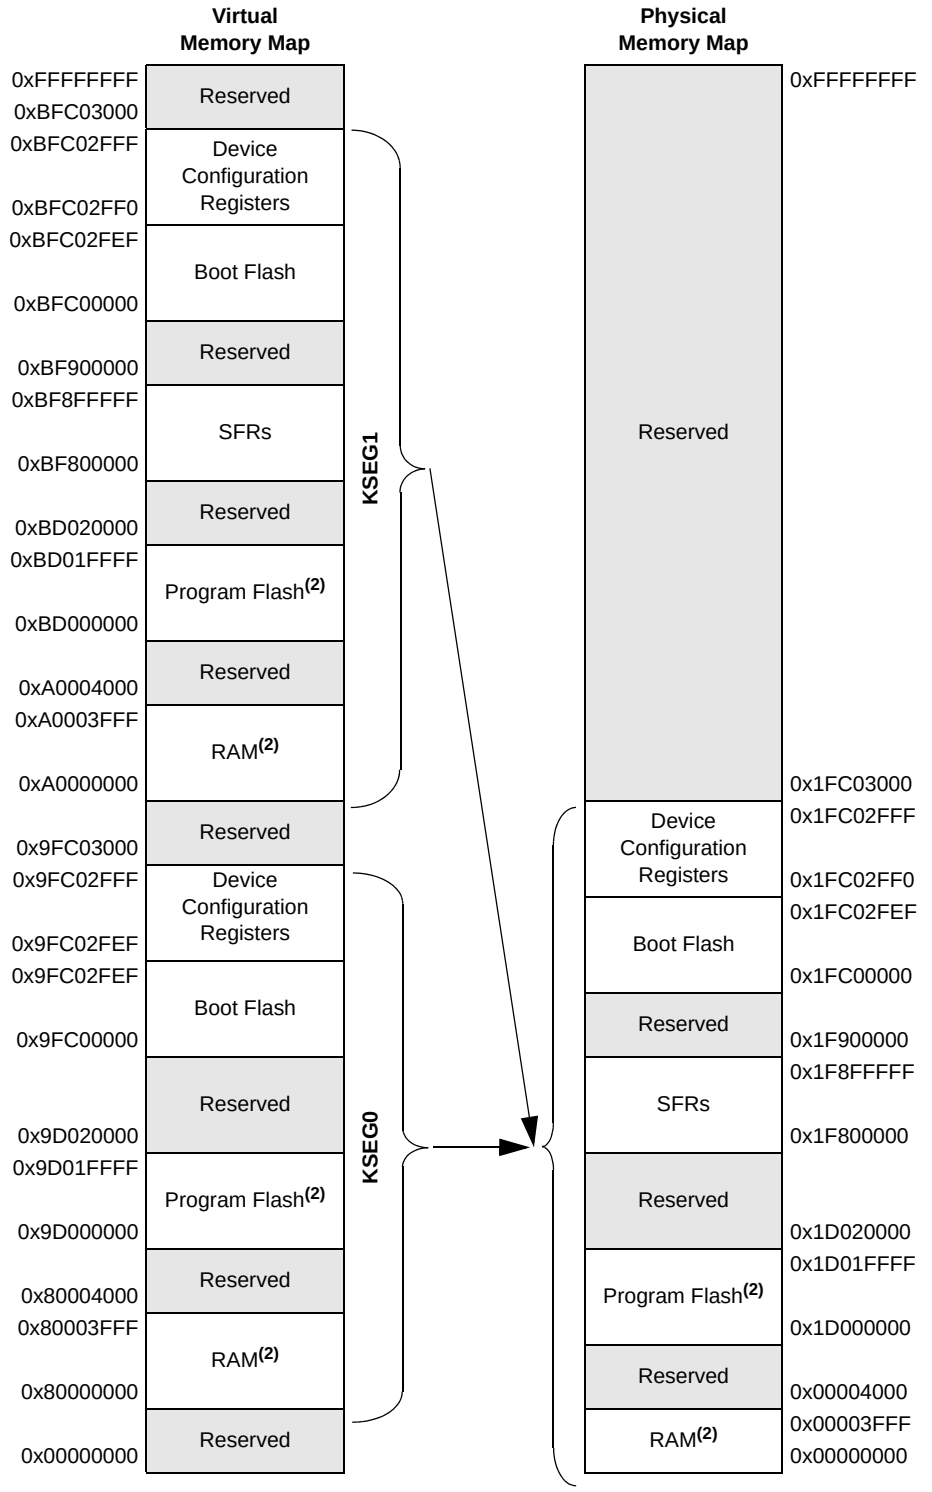
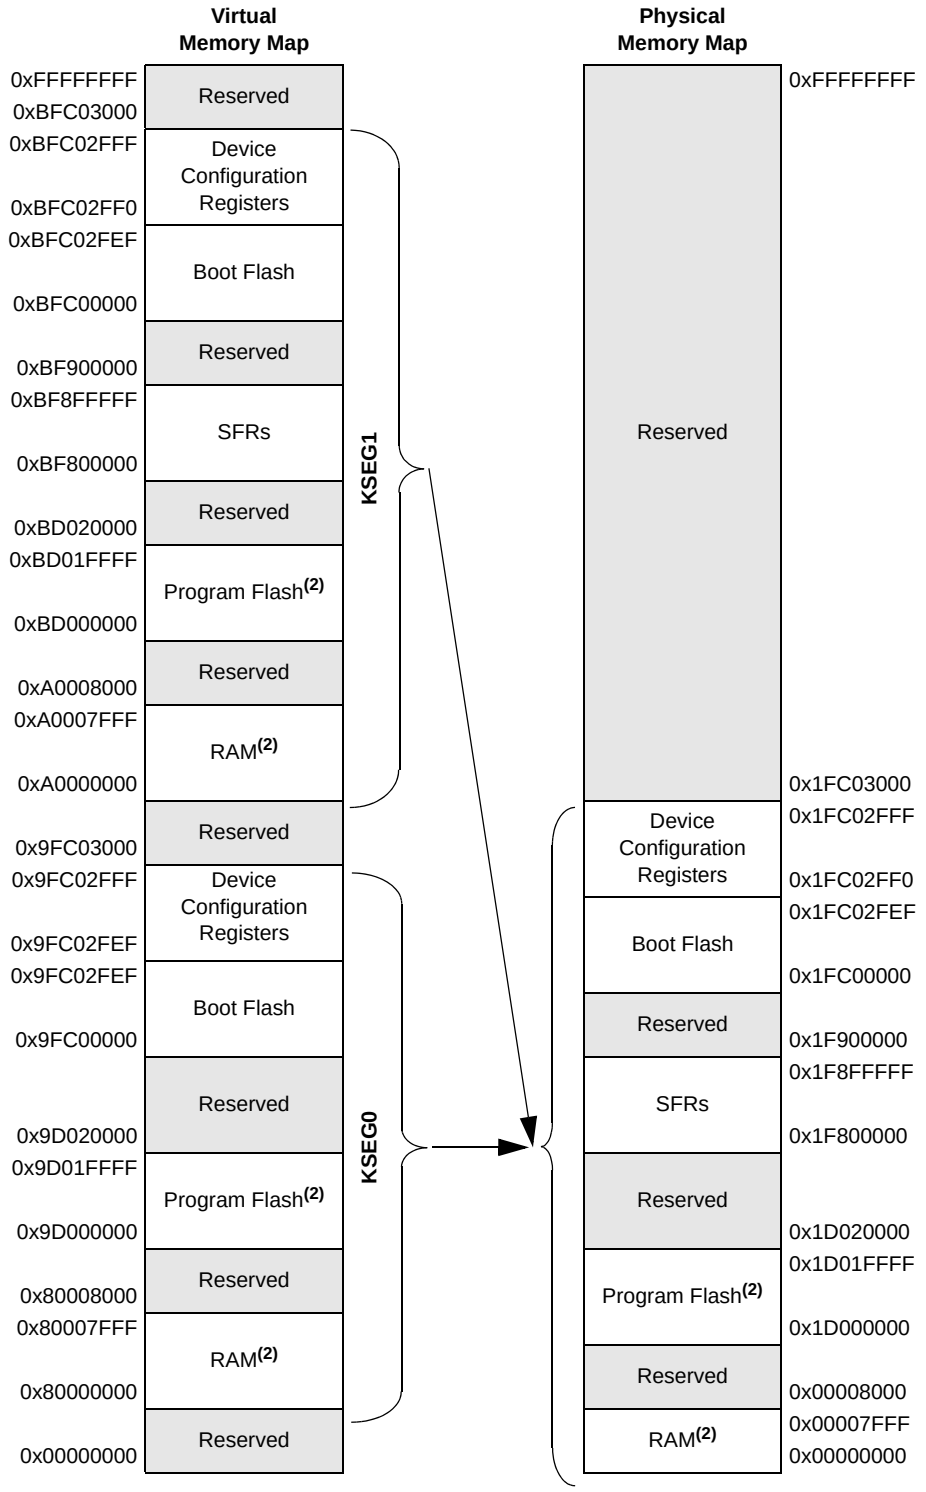


Note 1: Memory areas are not shown to scale.

2: The size of this memory region is programmable (see **Section 3. "Memory Organization"** (DS61115)) and can be changed by initialization code provided by end-user development tools (refer to the specific development tool documentation for information).

FIGURE 4-4: MEMORY MAP ON RESET FOR PIC32MX340F128H, PIC32MX340F128L, PIC32MX440F128H AND PIC32MX440F128L DEVICES(1)



Note 1: Memory areas are not shown to scale.

2: The size of this memory region is programmable (see **Section 3. "Memory Organization"** (DS61115)) and can be changed by initialization code provided by end-user development tools (refer to the specific development tool documentation for information).

Legend: x = unknown value on Reset, — = unimplemented, read as '0'. Reset values are shown in hexadecimal.

Note 1: Except where noted, all registers in this table have corresponding CLR, SET and INV registers at their virtual addresses, plus offsets of 0x4, 0x8 and 0xC, respectively. See **Section 12.1.1 "CLR, SET and INV Registers"** for more information.

2: This register does not have associated CLR, SET, and INV registers.

3: All bits in this register are read-only; therefore, CLR, SET, and INV registers are not supported.

4: The reset value for this bit is undefined.

9.0 PREFETCH CACHE

Note 1: This data sheet summarizes the features of the PIC32MX3XX/4XX family of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to **Section 4. "Prefetch Cache"** (DS61119) of the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

2: Some registers and associated bits described in this section may not be available on all devices. Refer to **Section 4.0 "Memory Organization"** in this data sheet for device-specific register and bit information.

Prefetch cache increases performance for applications executing out of the cacheable program Flash memory regions by implementing instruction caching, constant data caching and instruction prefetching.

9.1 Features

- 16 Fully Associative Lockable Cache Lines
- 16-byte Cache Lines
- Up to four Cache Lines Allocated to Data
- Two Cache Lines with Address Mask to hold repeated instructions
- Pseudo LRU replacement policy
- All Cache Lines are software writable
- 16-byte parallel memory fetch
- Predictive Instruction Prefetch

FIGURE 9-1: PREFETCH MODULE BLOCK DIAGRAM

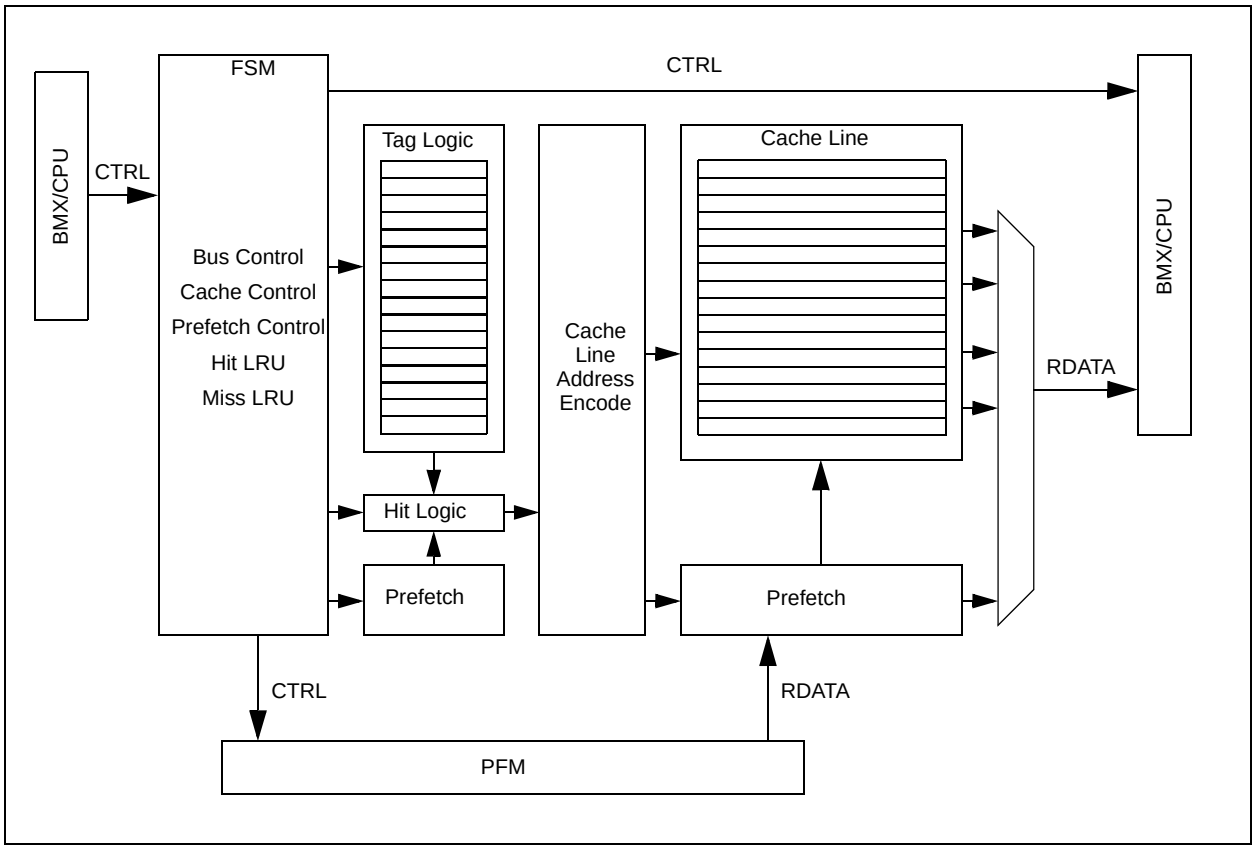

FIGURE 22-2: ADC CONVERSION CLOCK PERIOD BLOCK DIAGRAM

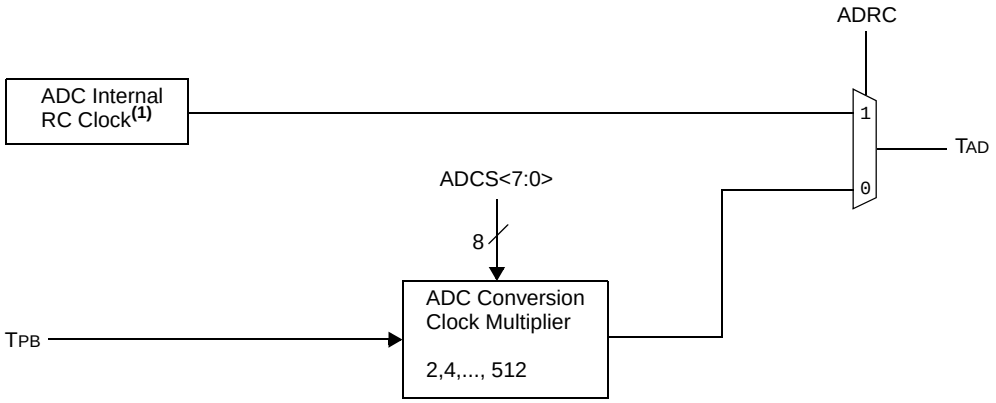


Note 1: See the ADC electrical characteristics for the exact RC clock value.

23.0 COMPARATOR

Note 1: This data sheet summarizes the features of the PIC32MX3XX/4XX family of devices. It is not intended to be a comprehensive reference source. Refer to **Section 19. "Comparator"** (DS61110) of the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

2: Some registers and associated bits described in this section may not be available on all devices. Refer to **Section 4.0 "Memory Organization"** in this data sheet for device-specific register and bit information.

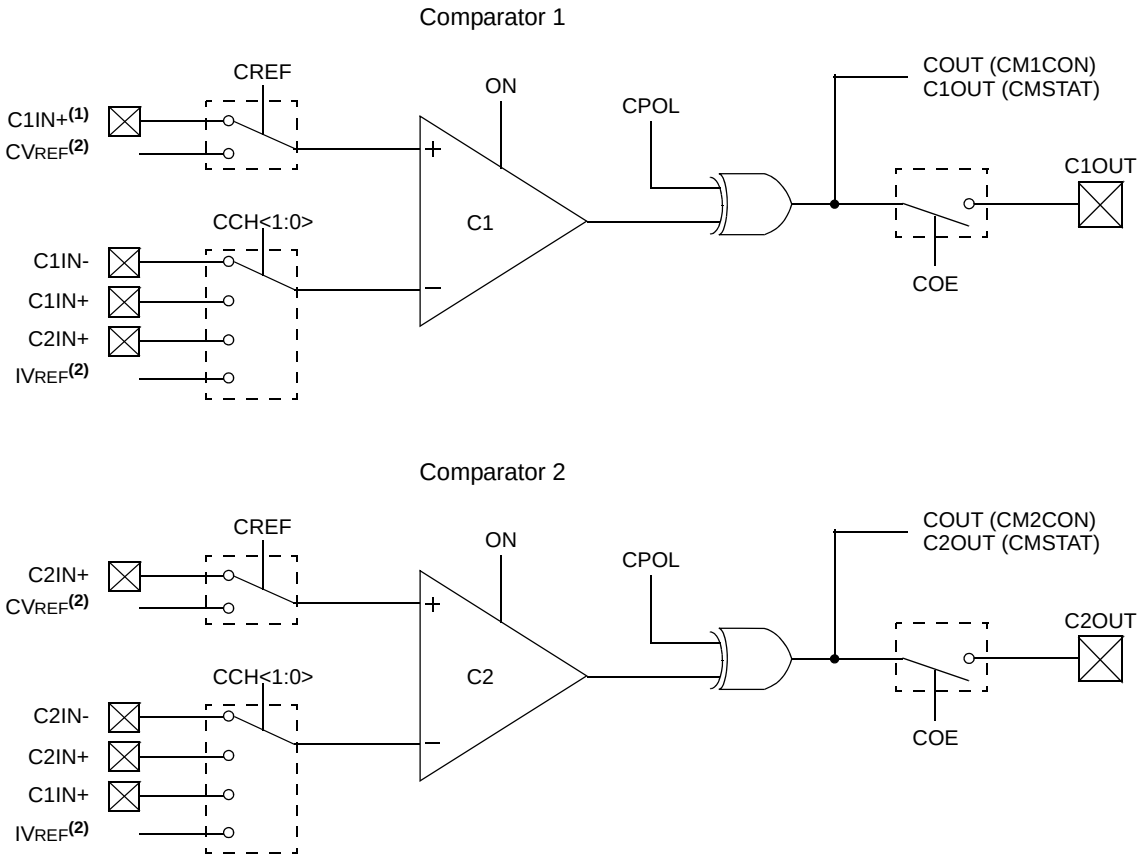
The PIC32MX3XX/4XX Analog Comparator module contains one or more comparator(s) that can be configured in a variety of ways.

Following are some of the key features of this module:

- Selectable inputs available include:
  - Analog inputs multiplexed with I/O pins
  - On-chip internal absolute voltage reference (IV_{REF})
  - Comparator voltage reference (CV_{REF})
- Outputs can be inverted
- Selectable interrupt generation

A block diagram of the comparator module is illustrated in Figure 23-1.

FIGURE 23-1: COMPARATOR BLOCK DIAGRAM



Note 1: On USB variants, when USB is enabled, this pin is controlled by the USB module and therefore is not available as a comparator input.

2: Internally connected.

24.0 COMPARATOR VOLTAGE REFERENCE (CVREF)

Note 1: This data sheet summarizes the features of the PIC32MX3XX/4XX family of devices. It is not intended to be a comprehensive reference source. Refer to **Section 20. "Comparator Voltage Reference (CVREF)"** (DS61109) of the *"PIC32 Family Reference Manual"*, which is available from the Microchip web site (www.microchip.com/PIC32).

2: Some registers and associated bits described in this section may not be available on all devices. Refer to **Section 4.0 "Memory Organization"** in this data sheet for device-specific register and bit information.

The CVREF is a 16-tap, resistor ladder network that provides a selectable reference voltage. Although its primary purpose is to provide a reference for the analog comparators, it also may be used independently of them.

A block diagram of the module is illustrated in Figure 24-1. The resistor ladder is segmented to provide two ranges of voltage reference values and has a power-down function to conserve power when the reference is not being used. The module's supply reference can be provided from either device VDD/VSS or an external voltage reference. The CVREF output is available for the comparators and typically available for pin output.

The comparator voltage reference has the following features:

- High and low range selection
- Sixteen output levels available for each range
- Internally connected to comparators to conserve device pins
- Output can be connected to a pin

FIGURE 24-1: COMPARATOR VOLTAGE REFERENCE BLOCK DIAGRAM

DC42c	23	—	µA	+25°C	3.3V	RTCC + Timer1 w/32 kHz Crystal: ΔI_{RTCC} **(Note 3)**
DC42e	—	10	µA	-40°C	3.6V	RTCC + Timer1 w/32 kHz Crystal: ΔI_{RTCC} **(Note 3)**
DC42f	—	30	µA	+25°C		
DC42g	—	44	µA	+85°C		
DC42i	—	44	µA	+105ºC		

Note 1: Base I_{PD} is measured with all digital peripheral modules disabled. All I/Os are configured as inputs and pulled low. WDT and FSCM are disabled.

2: Data in the "Typical" column is at 3.3V, 25°C unless otherwise stated. Parameters are for design guidance only and are not tested.

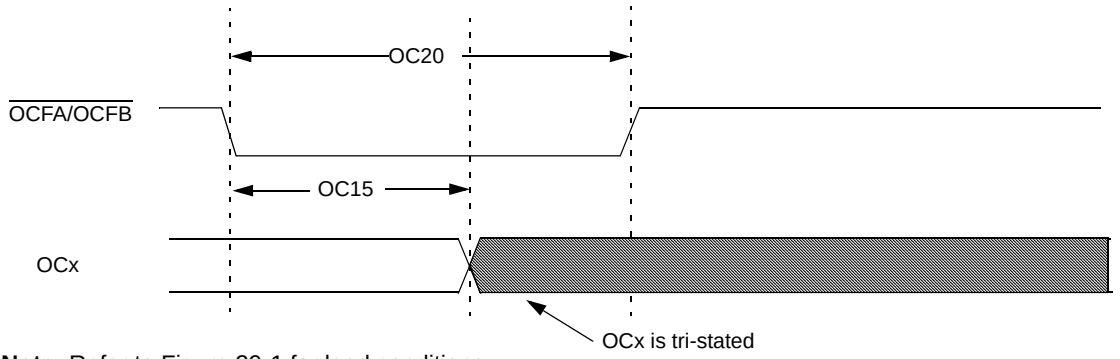
3: The Δ current is the additional current consumed when the module is enabled. This current should be added to the base I_{PD} current.

4: Test conditions for ADC module differential current are as follows: Internal ADC RC oscillator enabled.

5: Data is characterized at +70°C and not tested. Parameter is for design guidance only.

6: This parameter is characterized, but not tested in manufacturing.

FIGURE 29-9: OC/PWM MODULE TIMING CHARACTERISTICS



Note: Refer to Figure 29-1 for load conditions.

TABLE 29-27: SIMPLE OC/PWM MODE TIMING REQUIREMENTS

AC CHARACTERISTICS			Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated) Operating temperature -40°C ≤TA ≤+85°C for Industrial -40°C ≤TA ≤+105°C for V-Temp				
Param No.	**Symbol**	**Characteristics(1)**	**Min**	**Typical(2)**	**Max**	**Units**	**Conditions**
OC15	TFD	Fault Input to PWM I/O Change	—	—	25	ns	—
OC20	TFLT	Fault Input Pulse Width	50	—	—	ns	—

Note 1: These parameters are characterized, but not tested in manufacturing.

2: Data in "Typical" column is at 3.3V, 25°C unless otherwise stated. Parameters are for design guidance only and are not tested.

TABLE 29-34: ADC MODULE SPECIFICATIONS

AC CHARACTERISTICS			Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated) Operating temperature -40°C ≤TA ≤+85°C for Industrial -40°C ≤TA ≤+105°C for V-Temp				
Param. No.	**Symbol**	**Characteristics**	**Min.**	**Typical**	**Max.**	**Units**	**Conditions**
Device Supply							
AD01	AVDD	Module VDD Supply	Greater of VDD – 0.3 or 2.5	—	Lesser of VDD + 0.3 or 3.6	V	—
AD02	AVSS	Module VSS Supply	VSS	—	VSS + 0.3	V	—
Reference Inputs							
AD05	VREFH	Reference Voltage High	AVSS + 2.0	—	AVDD	V	**(Note 1)**
AD05a			2.5	—	3.6	V	VREFH = AVDD **(Note 3)**
AD06	VREFL	Reference Voltage Low	AVSS	—	VREFH – 2.0	V	**(Note 1)**
AD07	VREF	Absolute Reference Voltage (VREFH – VREFL)	2.0	—	AVDD	V	**(Note 3)**
AD08	IREF	Current Drain	—	250 —	400 3	µA µA	ADC operating ADC off
Analog Input							
AD12	VINH-VINL	Full-Scale Input Span	VREFL	—	VREFH	V	—
AD13	VINL	Absolute VINL Input Voltage	AVSS – 0.3	—	AVDD/2	V	—
AD14	VIN	Absolute Input Voltage	AVSS – 0.3	—	AVDD + 0.3	V	—
AD15	—	Leakage Current	—	±0.001	±0.610	µA	VINL = AVSS = VREFL = 0V, AVDD = VREFH = 3.3V Source Impedance = 10KΩ
AD17	RIN	Recommended Impedance of Analog Voltage Source	—	—	5K	Ω	**(Note 1)**
ADC Accuracy – Measurements with External VREF+/VREF-							
AD20c	Nr	Resolution	10 data bits			bits	—
AD21c	INL	Integral Nonlinearity	—	—	<±1	LSb	VINL = AVSS = VREFL = 0V, AVDD = VREFH = 3.3V
AD22c	DNL	Differential Nonlinearity	—	—	<±1	LSb	VINL = AVSS = VREFL = 0V, AVDD = VREFH = 3.3V **(Note 2)**
AD23c	GERR	Gain Error	—	—	<±1	LSb	VINL = AVSS = VREFL = 0V, AVDD = VREFH = 3.3V
AD24n	EOFF	Offset Error	—	—	<±1	LSb	VINL = AVSS = 0V, AVDD = 3.3V
AD25c	—	Monotonicity	—	—	—	—	Guaranteed

Note 1: These parameters are not characterized or tested in manufacturing.

2: With no missing codes.

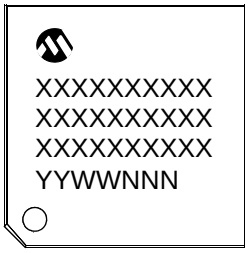
3: These parameters are characterized, but not tested in manufacturing.

4: Characterized with 1 kHz sinewave.

30.0 PACKAGING INFORMATION

30.1 Package Marking Information

64-Lead TQFP (10x10x1 mm)

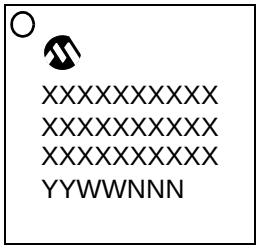


Example

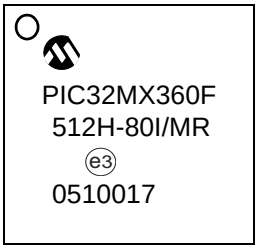
100-Lead TQFP (12x12x1 mm)

Example

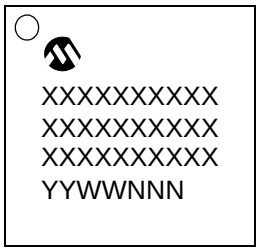
64-Lead QFN (9x9x0.9 mm)



Example



121-Lead XBGA (10x10x1.1 mm)



Example

Legend:	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week ‘01’)
	NNN	Alphanumeric traceability code
		Pb-free JEDEC designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

TABLE A-3: MAJOR SECTION UPDATES (CONTINUED)

Section Name	Update Description
Section 29.0 "Electrical Characteristics"	Added the new V-Temp temperature range (-40ºC to +105ºC) to the heading of all specification tables. Updated the Ambient temperature under bias, updated the Voltage on any 5V tolerant pin with respect to VSS when VDD < 2.3V, and added Voltage on VBUS with respect to Vss in Absolute Maximum Ratings. Added the characteristic, DC5a to Operating MIPS vs. Voltage (see Table 29-1). Updated or added the following parameters to the Operating Current (IDD) DC Characteristics: DC20, DC23, DC24c, DC25d, DC26c (see Table 29-5). Added the following parameters to the Idle Current (IIDLE) DC Characteristics: DC30c, DC31c, DC32c, DS33c, DC34c, DC35c, and DC36c (see Table 29-6). Added the following parameters to the Power-down Current (IPD) DC Characteristics: DC40g, DC40h, DC40i, DC41g, DC41h, DC42g, DC42h, DC42i, DC43h, and DC43i (see Table 29-7). Added the Brown-out Reset (BOR) Electrical Characteristics (see Table 29-10). Removed all Conditions from the Program Memory DC Characteristics (see Table 29-11). Removed the AC Characteristics voltage reference table (Table 29-15). Added Note 2 to the PLL Clock Timing Specifications (see Table 29-18). Updated the OC/PWM Module Timing Characteristics (see Figure 29-9). Added parameter IM51 and Note 3 to the I2Cx Bus Data Timing Requirements (Master Mode) (see Table 29-32). Added parameter numbers (AD13, AD14, and AD15) to the ADC Module Specifications (see Table 29-34). Updated the 10-bit ADC Conversion Rate Parameters (see Table 29-35). Updated parameter AD57 (TSAMP) in the Analog-to-Digital Conversion Timing Requirements (see Table 29-36). Updated the Conditions for parameters USB313, USB318, and USB319 in the OTG Electrical Specifications (see Table 29-40).
Section 30.0 "Packaging Information"	Updated the 64-Lead Plastic Quad Flat, No Lead Package (MR) – 9x9x0.9 mm Body [QFN] packing diagram.
Product Identification System	Added the new V-Temp (V) temperature information.
