Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

7. During eFUSE programming, V_{FS} must be within the recommended operating range and $T_j = +15^\circ\text{C}$ to $+85^\circ\text{C}$. Otherwise, V_{FS} can be connected to GND.

Important Note

Typical values for quiescent supply current are specified at nominal voltage, 85°C junction temperatures (T_j). Xilinx recommends analyzing static power consumption at $T_j = 85^\circ\text{C}$ because the majority of designs operate near the high end of the commercial temperature range. Quiescent supply current is specified by speed grade for Virtex-6 devices. Use the XPower™ Estimator (XPE) spreadsheet tool (download at <http://www.xilinx.com/power>) to calculate static power consumption for conditions other than those specified in Table 4.

Power-On Power Supply Requirements

Xilinx FPGAs require a certain amount of supply current during power-on to insure proper device initialization. The actual current consumed depends on the power-on sequence and ramp rate of the power supply.

The recommended power-on sequence for Virtex-6 devices is V_{CCINT} , V_{CCAUX} , and V_{CCO} to meet the power-up current requirements listed in [Table 5](#). V_{CCINT} can be powered up or down at any time, but power up current specifications can vary from [Table 5](#). The device will have no physical damage or reliability concerns if V_{CCINT} , V_{CCAUX} , and V_{CCO} sequence cannot be followed.

If the recommended power-up sequence cannot be followed and the I/Os must remain 3-stated throughout configuration, then V_{CCAUX} must be powered prior to V_{CCO} or V_{CCAUX} and V_{CCO} must be powered by the same supply. Similarly, for power-down, the reverse V_{CCAUX} and V_{CCO} sequence is recommended if the I/Os are to remain 3-stated.

The GTH transceiver supplies must be powered using a MGTHAVCC, MGTHAVCCR, MGTHAVCCPLL, and MGTHAVTT sequence. There are no sequencing requirement for these supplies with respect to the other FPGA supply voltages. For more detail see [Table 27: GTH Transceiver Power Supply Sequencing](#). There are no sequencing requirements for the GTX transceivers power supplies.

[Table 5](#) shows the minimum current, in addition to I_{CCQ} , that are required by Virtex-6 devices for proper power-on and configuration. If the current minimums shown in [Table 4](#) and [Table 5](#) are met, the device powers on after all three supplies have passed through their power-on reset threshold voltages. The FPGA must be configured after applying V_{CCINT} , V_{CCAUX} , and V_{CCO} for the appropriate configuration banks. Once initialized and configured, use the XPE tools to estimate current drain on these supplies.

2. All jitter values are based on a bit error ratio of $1e^{-12}$.
3. The frequency of the injected sinusoidal jitter is 80 MHz.
4. High-frequency jitter tolerance including 6 db of channel loss at a high frequency of the data rate divided by two.

Switching Characteristics

All values represented in this data sheet are based on these speed specifications: v1.17 for -3, -2, and -1; and v1.10 for -1L. Switching characteristics are specified on a per-speed-grade basis and can be designated as Advance, Preliminary, or Production. Each designation is defined as follows:

Advance

These specifications are based on simulations only and are typically available soon after device design specifications are frozen. Although speed grades with this designation are considered relatively stable and conservative, some under-reporting might still occur.

Preliminary

These specifications are based on complete ES (engineering sample) silicon characterization. Devices and speed grades with this designation are intended to give a better indication of the expected performance of production silicon. The probability of under-reporting delays is greatly reduced as compared to Advance data.

Production

These specifications are released once enough production silicon of a particular device family member has been characterized to provide full correlation between specifications and devices over numerous production lots. There is no under-reporting of delays, and customers receive formal notification of any subsequent changes. Typically, the slowest speed grades transition to Production before faster speed grades.

All specifications are always representative of worst-case supply voltage and junction temperature conditions.

Since individual family members are produced at different times, the migration from one category to another depends completely on the status of the fabrication process for each device.

[Table 42](#) correlates the current status of each Virtex-6 device on a per speed grade basis.

Testing of Switching Characteristics

All devices are 100% functionally tested. Internal timing parameters are derived from measuring internal test patterns. Listed below are representative values.

For more specific, more precise, and worst-case guaranteed data, use the values reported by the static timing analyzer and back-annotate to the simulation net list. Unless otherwise noted, values apply to all Virtex-6 devices.

Date	Version	Description of Revisions
02/08/11	2.12	Removed note 1 from Table 4 as the larger devices (XC6VLX550T, XC6VLX760, XC6VSX475T, and XC6VHX565T) are now offered in -2L. Updated Table 4 and Table 5 with data for the XC6VHX380T in the FF(G)1154 package. In Table 41 , updated -1L specification for DDR3. Added Note 1 to Table 42 . Moved the XC6VHX380T devices in the FF(G)1154 package to production release in Table 43 using ISE 12.4 software with current speed specifications. Updated description for F_{INDUTY} in Table 64 .
02/25/11	3.0	Designated the data sheet as Preliminary for all devices not already labeled production in Table 42 . Changed the XC6VHX380T devices in all packages to production status in Table 42 and Table 43 . Removed note 1 from Table 42 . Added maximum specifications to Table 25 . Updated $T_{HAVCC2HAVCCRX}$ in Table 27 . Updated the typical values and notes in Table 28 and Table 29 . Added values to Table 30 and Table 31 . In Table 34 , added values for T_{LOCK} and T_{PHASE} . Updated the values in Table 36 and added note 3. Updated Table 37 and added note 4.
03/21/11	3.1	Updated Table 2 including Note 7 . In Table 4 , added Note 3 and -2E, extended temperature range to the XC6VLX550T, XC6VLX760, XC6VSX475T, and XC6VHX380T devices, and added Note 5 for the XC6VHX565T. Updated Table 28 typical values. Updated the description for $F_{IDELAYCTRL_REF}$ in Table 53 . Updated F_{MCCK} in Table 59 .
04/01/11	3.2	Added T_j values for C, E, and I temperature ranges to Table 2 . Updated the I_{CCQ} values in Table 4 . Updated F_{GCLK} in Table 34 . Designated the data sheet as Production for all devices not already labeled production in Table 42 . Changed the XC6VHX255T and XC6VHX565T devices in all packages to production status in Table 42 and Table 43 . This included updates to the Virtex-6 Device Pin-to-Pin Output Parameter Guidelines and Virtex-6 Device Pin-to-Pin Input Parameter Guidelines for these devices. Production speed specifications for these devices are available using the speed specification v1.14 in the ISE 13.1 software update. Updated and added package skew values to Table 72 ; these values are correct with regards to previous production released speed specifications in software. Updated copyright page 1 and Notice of Disclaimer .
12/08/11	3.3	Production release of the Defense-grade XQ devices in Table 42 and Table 43 using ISE v13.3 v1.17 Patch for -2 and -1 speed specifications; and v1.10 for -1L speed specifications. Added the XQ6VLX130T, XQ6VLX240T, XQ6VLX550T, XQ6VSX315T, and XQ6VSX475T to the data sheet which included adding Table 45 . Updated T_j in Table 2 . In Table 40 , updated T_j for most specifications and added Note 4 . Added Note 4 to Table 41 . Added -1(XQ) speed specification columns only to Table 50 , Table 51 , Table 52 , and Table 58 .
