What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

- (a) Write to an I/O register.
- (b) Read the value from the I/O register to a general register.
- (c) Execute the operation using the value read.
- (d) Execute the subsequent instruction.

[Instruction examples]

- Byte-size I/O registers

```
MOV.L #SFR_ADDR, R1  
MOV.B #SFR_DATA, [R1]  
CMP [R1].UB, R1  
;; Next process
```

- Word-size I/O registers

```
MOV.L #SFR_ADDR, R1  
MOV.W #SFR_DATA, [R1]  
CMP [R1].W, R1  
;; Next process
```

- Longword-size I/O registers

```
MOV.L #SFR_ADDR, R1  
MOV.L #SFR_DATA, [R1]  
CMP [R1].L, R1  
;; Next process
```

If multiple registers are written to and a subsequent instruction should be executed after the write operations are entirely completed, only read the I/O register that was last written to and execute the operation using the value; it is not necessary to read or execute operation for all the registers that were written to.

Note 1. Do not leave the AVCC0, VREFH0, VREFL0, AVSS0, AVCC, VREF, and AVSS pins open circuit even if the A/D converter is not to be used.

- When the 12-bit converter is not in use:
Connect the AVCC0 pin to AVCC (or VCC for a 64-pin product), the VREFH0 pin to VREF (or AVCC or VCC for an 80- or 64-pin product, respectively), and the AVSS0 and VREFL0 pins to VSS.
- When the 10-bit converter is not in use:
Connect the AVCC pin to AVCC0, the VREF pin to VREFH0, and the AVSS pin to AVSS0.
- When neither the 10- nor the 12-bit converter is in use:
Connect the AVCC0, VREFH0, AVCC, and VREF pins to VCC, and the AVSS0, VREFL0, and AVSS pins to VSS.
