Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Wide Range I/O Support

IGLOO devices support JEDEC-defined wide range I/O operation. IGLOO devices support both the JESD8-B specification, covering 3 V and 3.3 V supplies, for an effective operating range of 2.7 V to 3.6 V, and JESD8-12 with its 1.2 V nominal, supporting an effective operating range of 1.14 V to 1.575 V.

Wider I/O range means designers can eliminate power supplies or power conditioning components from the board or move to less costly components with greater tolerances. Wide range eases I/O bank management and provides enhanced protection from system voltage spikes, while providing the flexibility to easily run custom voltage applications.

Specifying I/O States During Programming

You can modify the I/O states during programming in FlashPro. In FlashPro, this feature is supported for PDB files generated from Designer v8.5 or greater. See the *FlashPro User Guide* for more information.

Note: PDB files generated from Designer v8.1 to Designer v8.4 (including all service packs) have limited display of Pin Numbers only.

1. Load a PDB from the FlashPro GUI. You must have a PDB loaded to modify the I/O states during programming.
2. From the FlashPro GUI, click PDB Configuration. A FlashPoint – Programming File Generator window appears.
3. Click the Specify I/O States During Programming button to display the Specify I/O States During Programming dialog box.
4. Sort the pins as desired by clicking any of the column headers to sort the entries by that header. Select the I/Os you wish to modify (Figure 1-5 on page 1-9).
5. Set the I/O Output State. You can set Basic I/O settings if you want to use the default I/O settings for your pins, or use Custom I/O settings to customize the settings for each pin. Basic I/O state settings:
 - 1 – I/O is set to drive out logic High
 - 0 – I/O is set to drive out logic Low
 - Last Known State – I/O is set to the last value that was driven out prior to entering the programming mode, and then held at that value during programming
 - Z -Tri-State: I/O is tristated

Figure 1-5 • I/O States During Programming Window

6. Click OK to return to the FlashPoint – Programming File Generator window.

Note: I/O States During programming are saved to the ADB and resulting programming files after completing programming file generation.

Notes:

1. The minimum drive strength for any LVC MOS 1.2 V or LVC MOS 3.3 V software configuration when run in wide range is $\pm 100 \mu\text{A}$. Drive strength displayed in the software is supported for normal range only. For a detailed I/V curve, refer to the IBIS models.
2. All LVC MOS 3.3 V software macros support LVC MOS 3.3 V wide range as specified in the JESD-8B specification.
3. All LVC MOS 1.2 V software macros support LVC MOS 1.2 V wide range as specified in the JESD8-12 specification
4. Resistance is used to measure I/O propagation delays as defined in PCI specifications. See Figure 2-12 on page 2-79 for connectivity. This resistor is not required during normal operation.
5. For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-7 for derating values.

Notes:

1. IIL is the input leakage current per I/O pin over recommended operation conditions where $-0.3\text{ V} < V_{IN} < V_{IL}$.
2. IIH is the input leakage current per I/O pin over recommended operating conditions $V_{IH} < V_{IN} < V_{CCI}$. Input current is larger when operating outside recommended ranges
3. Currents are measured at 100°C junction temperature and maximum voltage.
4. Currents are measured at 85°C junction temperature.
5. Software default selection highlighted in gray.

Revision / Version	Changes	Page
Revision 18 (Nov 2009)	The version changed to v2.0 for IGLOO datasheet chapters, indicating the datasheet contains information based on final characterization. Please review the datasheet carefully as most tables were updated with new data.	N/A
Revision 17 (Sep 2009) Product Brief v1.6	The "Reprogrammable Flash Technology" section was modified to add "250 MHz (1.5 V systems) and 160 MHz (1.2 V systems) System Performance."	I
	"IGLOO Ordering Information" was revised to note that halogen-free packages are available with RoHS-compliant packaging.	III
	Table 1-1 • I/O Standards Supported is new.	1-7
	The definitions of hot-swap and cold-sparing were added to the "I/Os with Advanced I/O Standards" section.	1-7
Revision 16 (Apr 2009) Product Brief v1.5	M1AGL400 is no longer offered and was removed from the "IGLOO Devices" product table, "IGLOO Ordering Information", and "Temperature Grade Offerings".	I, III, IV
	The –F speed grade is no longer offered for IGLOO devices. The speed grade column and note regarding –F speed grade were removed from "IGLOO Ordering Information". The "Speed Grade and Temperature Grade Matrix" section was removed.	III, IV
	This datasheet now has fully characterized data and has moved from being Advance to a Production version. The version number changed from Advance v0.5 to v2.0. Please review the datasheet carefully as most tables were updated with new data.	N/A
DC and Switching Characteristics Advance v0.6	3.3 V LVCMOS and 1.2 V LVCMOS Wide Range support was added to the datasheet. This affects all tables that contained 3.3 V LVCMOS and 1.2 V LVCMOS data.	
	I_{IL} and I_{IH} input leakage current information was added to all "Minimum and Maximum DC Input and Output Levels" tables.	N/A
	–F was removed from the datasheet. The speed grade is no longer supported.	N/A
	The notes in Table 2-2 • Recommended Operating Conditions 1 were updated.	2-2
	Table 2-4 • Overshoot and Undershoot Limits 1 was updated.	2-3
	Table 2-5 • Package Thermal Resistivities was updated.	2-6
	Table 2-6 • Temperature and Voltage Derating Factors for Timing Delays (normalized to $T_J = 70^\circ\text{C}$, $V_{CC} = 1.425\text{ V}$) and Table 2-7 • Temperature and Voltage Derating Factors for Timing Delays (normalized to $T_J = 70^\circ\text{C}$, $V_{CC} = 1.14\text{ V}$) were updated.	2-7
	In Table 2-191 • RAM4K9 and Table 2-193 • RAM4K9, the following specifications were removed: t_{WRO} t_{CCKH}	2-122 and 2-124
	In Table 2-192 • RAM512X18 and Table 2-194 • RAM512X18, the following specifications were removed: t_{WRO} t_{CCKH}	2-123 and 2-125
Revision 15 (Feb 2009) Packaging v1.9	The "QN132" pin table for the AGL060 device is new.	4-31
