Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

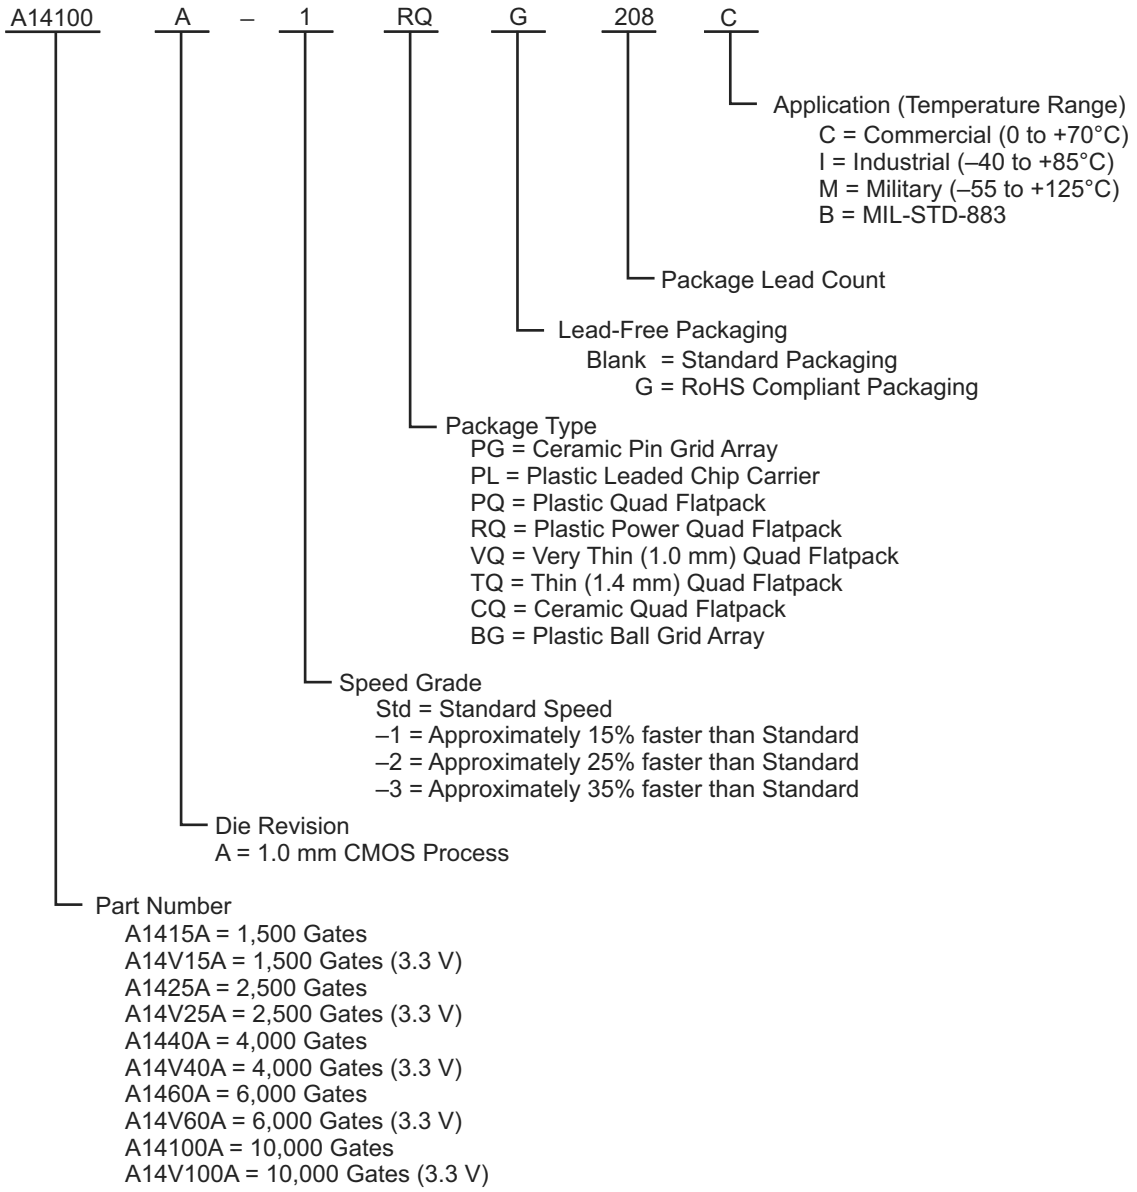
Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Obsolete
Number of LABs/CLBs	564
Number of Logic Elements/Cells	-
Total RAM Bits	-
Number of I/O	131
Number of Gates	4000
Voltage - Supply	4.5V ~ 5.5V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 70°C (TA)
Package / Case	160-BQFP
Supplier Device Package	160-PQFP (28x28)
Purchase URL	https://www.e-xfl.com/product-detail/microsemi/a1440a-pq160c

Ordering Information



Notes:

1. *The –2 and –3 speed grades have been discontinued.*
2. *The Ceramic Pin Grid Array packages PG100, PG133, and PG175 have been discontinued in all device densities, speed grades, and temperature grades.*
3. *The Plastic Ball Grid Array package BG225 has been discontinued in all device densities (specifically for A1460A), all speed grades, and all temperature grades.*
4. *Military Grade devices are no longer available for the A1440A device.*
5. *For more information about discontinued devices, refer to the Product Discontinuation Notices (PDNs) listed below, available on the Microsemi SoC Products Group website:*
   PDN March 2001
   PDN 0104
   PDN 0203
   PDN 0604
   PDN 1004

Package Thermal Characteristics

The device junction to case thermal characteristic is θjc, and the junction to ambient air characteristic is θja. The thermal characteristics for θja are shown with two different air flow rates.

Maximum junction temperature is 150°C.

A sample calculation of the absolute maximum power dissipation allowed for a CPGA 175-pin package at commercial temperature and still air is as follows:

$$\frac{\text{Max. junction temp. (°C)} - \text{Max. ambient temp. (°C)}}{\theta_{ja}\text{°C/W}} = \frac{150\text{°C} - 70\text{°C}}{25\text{°C/W}} = 3.2\text{ W}$$

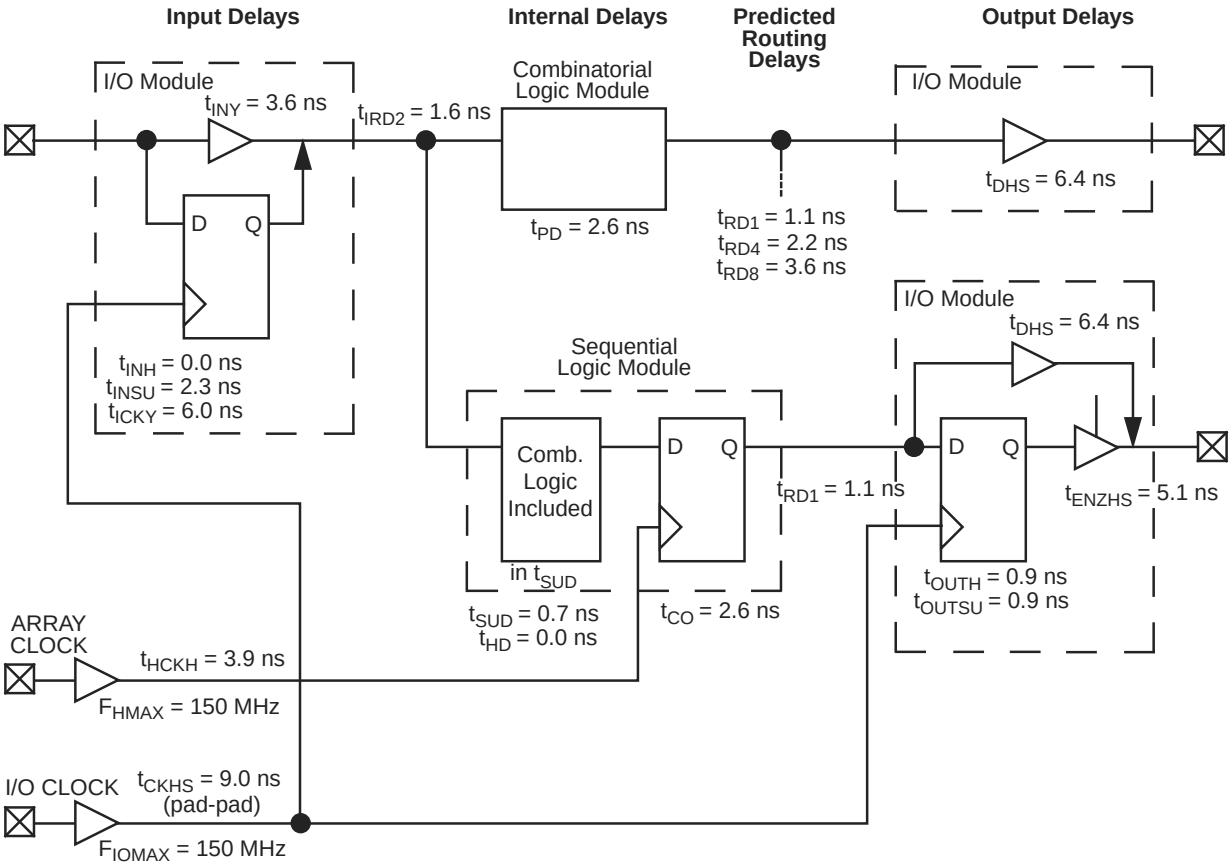
EQ 2

Table 2-8 • **Package Thermal Characteristics**

Package Type*	**Pin Count**	θ_{jc}	θ_{ja} **Still Air**	θ_{ja} **300 ft./min.**	**Units**
Ceramic Pin Grid Array	100	20	35	17	°C/W
	133	20	30	15	°C/W
	175	20	25	14	°C/W
	207	20	22	13	°C/W
	257	20	15	8	°C/W
Ceramic Quad Flatpack	132	13	55	30	°C/W
	196	13	36	24	°C/W
	256	13	30	18	°C/W
Plastic Quad Flatpack	100	13	51	40	°C/W
	160	10	33	26	°C/W
	208	10	33	26	°C/W
Very Thin Quad Flatpack	100	12	43	35	°C/W
Thin Quad Flatpack	176	11	32	25	°C/W
Power Quad Flatpack	208	0.4	17	13	°C/W
Plastic Leaded Chip Carrier	84	12	37	28	°C/W
Plastic Ball Grid Array	225	10	25	19	°C/W
	313	10	23	17	°C/W

Note: Maximum power dissipation in still air:
PQ160 = 2.4 W
PQ208 = 2.4 W
PQ100 = 1.6 W
VQ100 = 1.9 W
TQ176 = 2.5 W
PL84 = 2.2 W
RQ208 = 4.7 W
BG225 = 3.2 W
BG313 = 3.5 W

ACT 3 Timing Model



Note: Values shown for A1425A –1 speed grade device.

Figure 2-10 • **Timing Model**

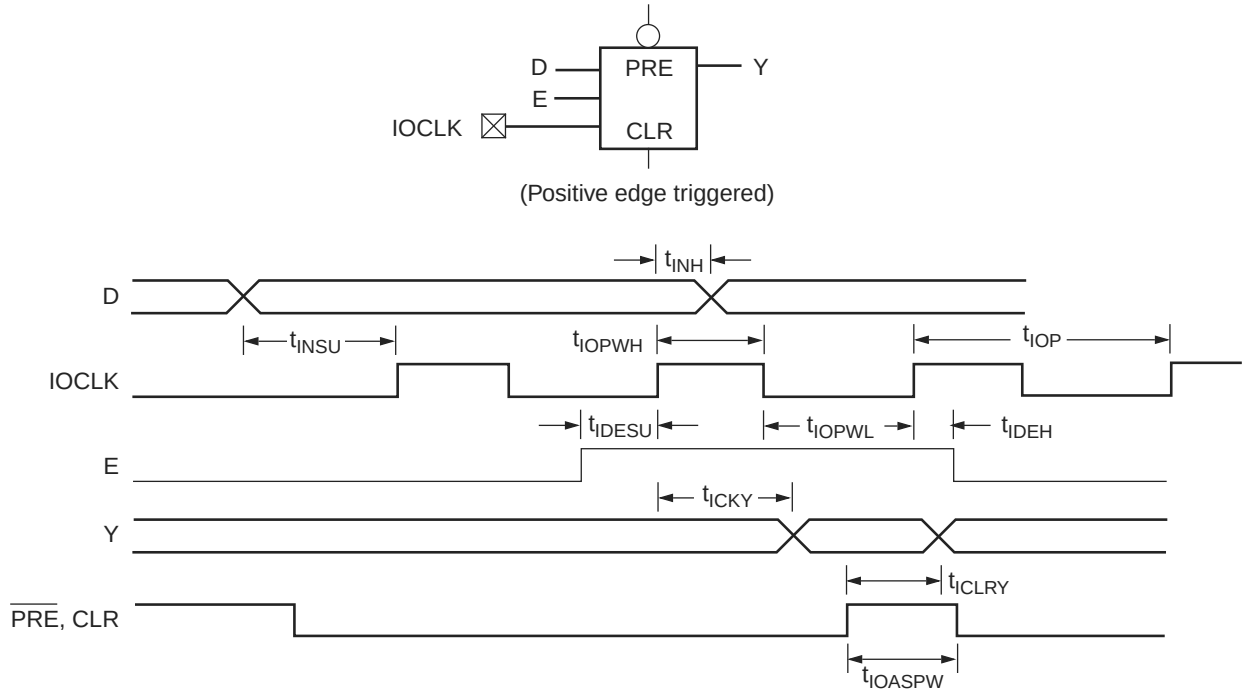


Figure 2-16 • **I/O Module: Sequential Input Timing Characteristics**

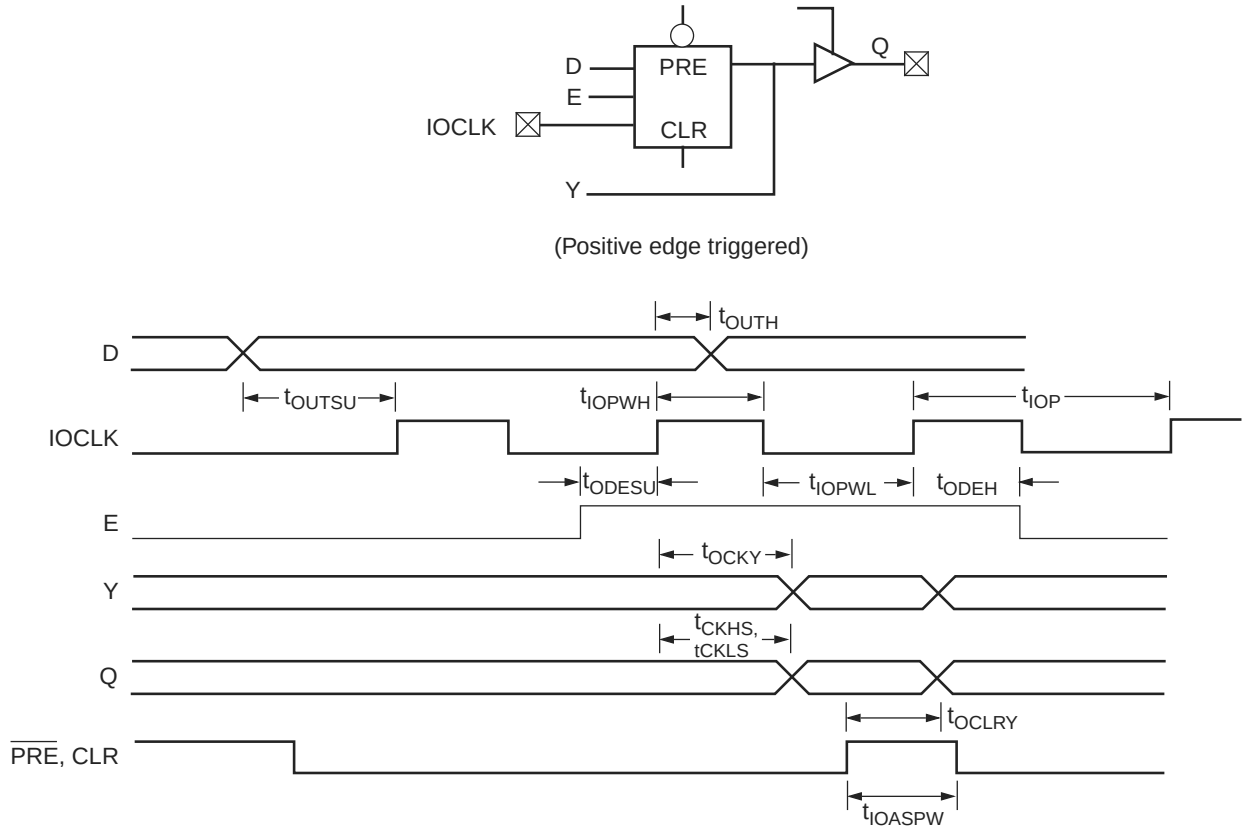

Figure 2-17 • **I/O Module: Sequential Output Timing Characteristics**

Tightest Delay Distributions

Propagation delay between logic modules depends on the resistive and capacitive loading of the routing tracks, the interconnect elements, and the module inputs being driven. Propagation delay increases as the length of routing tracks, the number of interconnect elements, or the number of inputs increases.

From a design perspective, the propagation delay can be statistically correlated or modeled by the fanout (number of loads) driven by a module. Higher fanout usually requires some paths to have longer lengths of routing track. The ACT 3 family delivers the tightest fanout delay distribution of any FPGA. This tight distribution is achieved in two ways: by decreasing the delay of the interconnect elements and by decreasing the number of interconnect elements per path.

Microsemi's patented PLICE antifuse offers a very low resistive/capacitive interconnect. The ACT 3 family's antifuses, fabricated in 0.8 micron m lithography, offer nominal levels of 200Ω resistance and 6 femtofarad (fF) capacitance per antifuse. The ACT 3 fanout distribution is also tighter than alternative devices due to the low number of antifuses required per interconnect path. The ACT 3 family's proprietary architecture limits the number of antifuses per path to only four, with 90% of interconnects using only two antifuses.

The ACT 3 family's tight fanout delay distribution offers an FPGA design environment in which fanout can be traded for the increased performance of reduced logic level designs. This also simplifies performance estimates when designing with ACT 3 devices.

***Table 2-14* • Logic Module and Routing Delay by Fanout (ns); Worst-Case Commercial Conditions**

Speed Grade	FO = 1	FO = 2	FO = 3	FO = 4	FO = 8
ACT 3 –3	2.9	3.2	3.4	3.7	4.8
ACT 3 –2	3.3	3.7	3.9	4.2	5.5
ACT 3 –1	3.7	4.2	4.4	4.8	6.2
ACT 3 STD	4.3	4.8	5.1	5.5	7.2

Notes:

1. *Obtained by added $t_{RD(x=FO)}$ to t_{PD} from the Logic Module Timing Characteristics Tables found in this datasheet.*
2. *The –2 and –3 speed grades have been discontinued. Refer to PDN 0104, PDN 0203, PDN 0604, and PDN 1004 at http://www.microsemi.com/soc/support/notifications/default.aspx#pdn.*

Timing Characteristics

Timing characteristics for ACT 3 devices fall into three categories: family dependent, device dependent, and design dependent. The input and output buffer characteristics are common to all ACT 3 family members. Internal routing delays are device dependent. Design dependency means actual delays are not determined until after placement and routing of the user's design is complete. Delay values may then be determined by using the ALS Timer utility or performing simulation with post-layout delays.

Critical Nets and Typical Nets

Propagation delays are expressed only for typical nets, which are used for initial design performance evaluation. Critical net delays can then be applied to the most time-critical paths. Critical nets are determined by net property assignment prior to placement and routing. Up to 6% of the nets in a design may be designated as critical, while 90% of the nets in a design are typical.

Long Tracks

Some nets in the design use long tracks. Long tracks are special routing resources that span multiple rows, columns, or modules. Long tracks employ three and sometimes four antifuse connections. This increases capacitance and resistance, result ng in longer net delays for macros connected to long tracks. Typically up to 6% of nets in a fully utilized device require long tracks. Long tracks contribute approximately 4 ns to 14 ns delay. This additional delay is represented statistically in higher fanout (FO = 8) routing delays in the datasheet specifications section.

87	GND	GND
96	VCC	VCC
97	GND	GND

Notes:

1. All unlisted pin numbers are user I/Os.
2. NC denotes no connection.
3. MODE should be terminated to GND through a 10K resistor to enable Actionprobe usage; otherwise it can be terminated directly to GND.

4 – Datasheet Information

List of Changes

The following table lists critical changes that were made in each version of the datasheet.

Revision	Changes	Page
Revision 3 (January 2012)	The description for SDO pins had earlier been removed from the datasheet and has now been included again, in the "Pin Descriptions" section (SAR 35820).	2-21
	SDO pin numbers had earlier been removed from package pin assignment tables in the datasheet, and have now been restored to the pin tables (SAR 35820).	3-1
Revision 2 (September 2011)	The ACT 3 datasheet was formatted newly in the style used for current datasheets. The same information is present (other than noted in the list of changes for this revision) but divided into chapters.	N/A
	The datasheet was revised to note in multiple places that speed grades –2 and –3 have been discontinued. The following device/package combinations have been discontinued for all speed grades and temperatures (SAR 33872): A1415 PG100 A1425 PG133 A1440 PG175 A1460 BG225 Refer to PDN 0104, PDN 0203, PDN 0604, and PDN 1004.	I and others
	The "Features" section was revised to state the clock-to-ouput time and on-chip performance for –1 speed grade as 9.0 ns and 186 MHz. The "General Description" section was revised in accordance (SAR 33872).	I
	The maximum performance values were updated in Table 1 • ACT 3 Family Product Information, and now reflect worst-case commercial for the –1 speed grade (SAR 33872).	I
	The "Product Plan" table was updated as follows to conform to current offerings (SAR 33872): The A1415A device is offered in PL84, PG100, and VQ100 packages for Military application. The A1440A device is offered in TQ176 and VQ100 packages for Industrial application.	III
	Table 1-1 • Chip-to-Chip Performance (worst-case commercial) was updated to include data for all speed grades instead of only –3 (SAR 33872).	1-2
	Figure 1-1 • Predictable Performance (worst-case commercial, –1 speed grade) was revised to reflect values for the –1 speed grade (SAR 33872).	1-1
	Figure 2-10 • Timing Model was updated to show data for the –1 speed grade instead of –3 (SAR 33872).	2-16
	Table 2-14 • Logic Module and Routing Delay by Fanout (ns); Worst-Case Commercial Conditions was updated to include data for all speed grades instead of only –3 (SAR 33872).	2-20
	Package names used in the "Package Pin Assignments" section and throughout the document were revised to match standards given in *Package Mechanical Drawings* (SAR 27395).	3-1

Microsemi Corporation (NASDAQ: MSCC) offers a comprehensive portfolio of semiconductor solutions for: aerospace, defense and security; enterprise and communications; and industrial and alternative energy markets. Products include high-performance, high-reliability analog and RF devices, mixed signal and RF integrated circuits, customizable SoCs, FPGAs, and complete subsystems. Microsemi is headquartered in Aliso Viejo, Calif. Learn more at **www.microsemi.com**.
