

Welcome to [E-XFL.COM](https://www.e-xfl.com)

Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details

Product Status	Obsolete
Number of LABs/CLBs	848
Number of Logic Elements/Cells	-
Total RAM Bits	-
Number of I/O	167
Number of Gates	6000
Voltage - Supply	4.5V ~ 5.5V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 85°C (TA)
Package / Case	208-BFQFP
Supplier Device Package	208-PQFP (28x28)
Purchase URL	https://www.e-xfl.com/product-detail/microsemi/a1460a-1pq208i

Device/Package	Speed Grade ¹				Application ¹

Notes:

- Applications:**
C = Commercial
I = Industrial
M = Military
2. Commercial only

Availability:
✓ = Available
P = Planned
– = Not planned
D = Discontinued

Speed Grade:
–1 = Approx. 15% faster than Std.
–2 = Approx. 25% faster than Std.
–3 = Approx. 35% faster than Std.
(–2 and –3 speed grades have been discontinued.)

ACT 3 Family Overview

General Description	1-1
---------------------------	-----

Detailed Specifications

Topology	2-1
Logic Modules	2-2
I/Os	2-3
Clock Networks	2-4
Routing Structure	2-5
5 V Operating Conditions	2-9
3.3 V Operating Conditions	2-10
Package Thermal Characteristics	2-11
ACT 3 Timing Model	2-16
Pin Descriptions	2-42

Package Pin Assignments

PL84	3-1
PQ100	3-3

PG100	3-24
PG133	3-26
PG175	3-28
PG207	3-30
PG257	3-32

Datasheet Information

List of Changes	4-1
Datasheet Categories	4-3
Safety Critical, Life Support, and High-Reliability Applications Policy	4-3

The S-module contains a full implementation of the C-module plus a clearable sequential element that can either implement a latch or flip-flop function. The S-module can therefore implement any function implemented by the C-module. This allows complex combinatorial-sequential functions to be implemented with no delay penalty. The Designer Series Development System will automatically combine any C-module macro driving an S-module macro into the S-module, thereby freeing up a logic module and eliminating a module delay.

The clear input CLR is accessible from the routing channel. In addition, the clock input may be connected to one of three clock networks: CLKA, CLKB, or HCLK. The C-module and S-module functional descriptions are shown in Figure 2-2 and Figure 2-3 on page 2-2. The clock selection is determined by a multiplexer select at the clock input to the S-module.

I/Os

I/O Modules

I/O modules provide an interface between the array and the I/O Pad Drivers. I/O modules are located in the array and access the routing channels in a similar fashion to logic modules. The I/O module schematic is shown in Figure 4. The signals DataIn and DataOut connect to the I/O pad driver.

Figure 2-4 • Functional Diagram for I/O Module

Each I/O module contains two D-type flip-flops. Each flip-flop is connected to the dedicated I/O clock (IOCLK). Each flip-flop can be bypassed by nonsequential I/Os. In addition, each flip-flop contains a data enable input that can be accessed from the routing channels (ODE and IDE). The asynchronous preset/clear input is driven by the dedicated preset/clear network (IOPLK). Either preset or clear can be selected individually on an I/O module by I/O module basis.

Determining Average Switching Frequency

To determine the switching frequency for a design, you must have a detailed understanding of the data input values to the circuit. The following guidelines are meant to represent worst-case scenarios so that they can be generally used to predict the upper limits of power dissipation. These guidelines are as follows:

Table 2-13 • Guidelines for Predicting Power Dissipation

Data	Value
Logic Modules (m)	80% of modules
Inputs switching (n)	# inputs/4
Outputs switching (p)	# output/4
First routed array clock loads (q1)	40% of sequential modules
Second routed array clock loads (q2)	40% of sequential modules
Load capacitance (CL)	35 pF
Average logic module switching rate (fm)	F/10
Average input switching rate (fn)	F/5
Average output switching rate (fp)	F/10
Average first routed array clock rate (fq1)	F/2
Average second routed array clock rate (fq2)	F/2
Average dedicated array clock rate (fs1)	F
Average dedicated I/O clock rate (fs2)	F

ACT 3 Timing Model

Predicted Routing Delays⁴												
t _{RD1}	FO = 1 Routing Delay		0.9		1.0		1.1		1.3		1.7	ns
t _{RD2}	FO = 2 Routing Delay		1.2		1.4		1.6		1.8		2.4	ns
t _{RD3}	FO = 3 Routing Delay		1.4		1.6		1.8		2.1		2.8	ns
t _{RD4}	FO = 4 Routing Delay		1.7		1.9		2.2		2.5		3.3	ns
t _{RD8}	FO = 8 Routing Delay		2.8		3.2		3.6		4.2		5.5	ns
Logic Module Sequential Timing												
t _{SUD}	Flip-Flop Data Input Setup	0.5		0.6		0.8		0.8		0.8		ns
t _{HD}	Flip-Flop Data Input Hold	0.0		0.0		0.5		0.5		0.5		ns
t _{SUD}	Latch Data Input Setup	0.5		0.6		0.8		0.8		0.8		ns
t _{HD}	Latch Data Input Hold	0.0		0.0		0.5		0.5		0.5		ns
t _{WASYN}	Asynchronous Pulse Width	2.4		3.2		3.8		4.8		6.5		ns
t _{WCLKA}	Flip-Flop Clock Pulse Width	2.4		3.2		3.8		4.8		6.5		ns
t _A	Flip-Flop Clock Input Period	5.0		6.8		8.0		10.0		13.4		ns
f _{MAX}	Flip-Flop Clock Frequency		200		150		125		100		75	MHz

Notes:

1. VCC = 3.0 V for 3.3 V specifications.
2. For dual-module macros, use t_{PD} + t_{RD1} + t_{PDn} + t_{CO} + t_{RD1} + t_{PDn} or t_{PD1} + t_{RD1} + t_{SUD}, whichever is appropriate.
3. The –2 and –3 speed grades have been discontinued. Refer to PDN 0104, PDN 0203, PDN 0604, and PDN 1004 at <http://www.microsemi.com/soc/support/notifications/default.aspx#pdn>.
4. Routing delays are for typical designs across worst-case operating conditions. These parameters should be used for estimating device performance. Post-route timing analysis or simulation is required to determine actual worst-case performance. Post-route timing is based on actual routing delay measurements performed on the device prior to shipment.

SDO Serial Data Output (Output)

Serial data output for diagnostic probe. SDO is active when the MODE pin is High. This pin functions as an I/O when the MODE pin is Low.

DCLK Diagnostic Clock (Input)

Clock input for diagnostic probe and device programming. DCLK is active when the MODE pin is HIGH. This pin functions as an I/O when the MODE pin is LOW.

VCC 5 V Supply Voltage

HIGH supply voltage.

PQ100		
Pin Number	A1415 Function	A1425 Function

69	HCLK, I/O	HCLK, I/O	156	VCC	VCC
82	NC	I/O	157	PRA, I/O	PRA, I/O
83	NC	I/O	158	NC	I/O
87	SDO	SDO	170	NC	I/O
88	IOPCL, I/O	IOPCL, I/O	176	DCLK, I/O	DCLK, I/O

Notes:

1. All unlisted pin numbers are user I/Os.
2. NC denotes no connection.
3. MODE should be terminated to GND through a 10K resistor to enable Actionprobe usage; otherwise it can be terminated directly to GND.

Revision	Changes	Page
Revision 2 (continued)	In the "Package Pin Assignments" section, notes were added to the pin tables for the following packages, stating that they are discontinued: "BG225" "PG100" "PG133" "PG175"	3-20 3-24 3-26 3-28
Revision 1 (June 2006)	RoHS compliant information was added to the "Ordering Information" section.	II

Datasheet Categories

Categories

In order to provide the latest information to designers, some datasheet parameters are published before data has been fully characterized from silicon devices. The data provided for a given device is designated as either "Product Brief," "Advance," "Preliminary," or "Production." The definitions of these categories are as follows:

Product Brief

The product brief is a summarized version of a datasheet (advance or production) and contains general product information. This document gives an overview of specific device and family information.

Advance

This version contains initial estimated information based on simulation, other products, devices, or speed grades. This information can be used as estimates, but not for production. This label only applies to the DC and Switching Characteristics chapter of the datasheet and will only be used when the data has not been fully characterized.

Preliminary

The datasheet contains information based on simulation and/or initial characterization. The information is believed to be correct, but changes are possible.

Production

This version contains information that is considered to be final.

Export Administration Regulations (EAR)

The products described in this document are subject to the Export Administration Regulations (EAR). They could require an approved export license prior to export from the United States. An export includes release of product or disclosure of technology to a foreign national inside or outside the United States.

Safety Critical, Life Support, and High-Reliability Applications Policy

The products described in this advance status document may not have completed the Microsemi qualification process. Products may be amended or enhanced during the product introduction and qualification process, resulting in changes in device functionality or performance. It is the responsibility of each customer to ensure the fitness of any product (but especially a new product) for a particular purpose, including appropriateness for safety-critical, life-support, and other high-reliability applications. Consult the Microsemi SoC Products Group Terms and Conditions for specific liability exclusions relating to life-support applications. A reliability report covering all of the SoC Products Group's products is available at http://www.microsemi.com/soc/documents/ORT_Report.pdf. Microsemi also offers a variety of enhanced qualification and lot acceptance screening procedures. Contact your local sales office for additional reliability information.

Microsemi Corporation (NASDAQ: MSCC) offers a comprehensive portfolio of semiconductor solutions for: aerospace, defense and security; enterprise and communications; and industrial and alternative energy markets. Products include high-performance, high-reliability analog and RF devices, mixed signal and RF integrated circuits, customizable SoCs, FPGAs, and complete subsystems. Microsemi is headquartered in Aliso Viejo, Calif. Learn more at www.microsemi.com.
