Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	ARM® Cortex®-M3
Core Size	32-Bit Single-Core
Speed	180MHz
Connectivity	CANbus, EBI/EMI, Ethernet, I²C, IrDA, Microwire, SD, SPI, SSI, SSP, UART/USART, USB, USB OTG
Peripherals	Brown-out Detect/Reset, DMA, I²S, POR, WDT
Number of I/O	49
Program Memory Size	512KB (512K x 8)
Program Memory Type	FLASH
EEPROM Size	16K x 8
RAM Size	136K x 8
Voltage - Supply (Vcc/Vdd)	2.2V ~ 3.6V
Data Converters	A/D 4x10b; D/A 1x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	100-TFBGA
Supplier Device Package	100-TFBGA (9x9)
Purchase URL	https://www.e-xfl.com/product-detail/nxp-semiconductors/lpc1833jet100e

Table 3. Pin description *…continued*

Pin name	LBGA256	TFBGA100	LQFP144	LQFP208		Reset state [1]	Type	Description
P1_5	R5	J4	48	65	[2]	N; PU	I/O	**GPIO1[8] —** General purpose digital input/output pin.
							O	**CTOUT_10 —** SCTimer/PWM output 10. Match output 3 of timer 3.
							-	**R —** Function reserved.
							O	**EMC_CS0 —** LOW active Chip Select 0 signal.
							I	**USB0_PWR_FAULT —** Port power fault signal indicating overcurrent condition; this signal monitors over-current on the USB bus (external circuitry required to detect over-current condition).
							I/O	**SSP1_SSEL —** Slave Select for SSP1.
							-	**R —** Function reserved.
							O	**SD_POW —** SD/MMC card power monitor output.
P1_6	T4	K4	49	67	[2]	N; PU	I/O	**GPIO1[9] —** General purpose digital input/output pin.
							I	**CTIN_5 —** SCTimer/PWM input 5. Capture input 2 of timer 2.
							-	**R —** Function reserved.
							O	**EMC_WE —** LOW active Write Enable signal.
							-	**R —** Function reserved.
							O	**EMC_BLS0 —** LOW active Byte Lane select signal 0.
							-	**R —** Function reserved.
							I/O	**SD_CMD —** SD/MMC command signal.
P1_7	T5	G4	50	69	[2]	N; PU	I/O	**GPIO1[0] —** General purpose digital input/output pin.
							I	**U1_DSR —** Data Set Ready input for UART1.
							O	**CTOUT_13 —** SCTimer/PWM output 13. Match output 3 of timer 3.
							I/O	**EMC_D0 —** External memory data line 0.
							O	**USB0_PPWR —** VBUS drive signal (towards external charge pump or power management unit); indicates that VBUS must be driven (active HIGH). Add a pull-down resistor to disable the power switch at reset. This signal has opposite polarity compared to the USB_PPWR used on other NXP LPC parts.
							-	**R —** Function reserved.
							-	**R —** Function reserved.
							-	**R —** Function reserved.

Table 3. Pin description *…continued*

Pin name	LBGA256	TFBGA100	LQFP144	LQFP208		Reset state [1]	Type	Description
P2_2	M15	F5	84	121	[2]	N; PU	-	**R —** Function reserved.
							I/O	**U0_UCLK —** Serial clock input/output for USART0 in synchronous mode.
							I/O	**EMC_A11 —** External memory address line 11.
							O	**USB0_IND1 —** USB0 port indicator LED control output 1.
							I/O	**GPIO5[2] —** General purpose digital input/output pin.
							I	**CTIN_6 —** SCTimer/PWM input 6. Capture input 1 of timer 3.
							I	**T3_CAP2 —** Capture input 2 of timer 3.
							O	**$\overline{\text{EMC\_CS1}}$ —** LOW active Chip Select 1 signal.
P2_3	J12	D8	87	127	[3]	N; PU	-	**R —** Function reserved.
							I/O	**I2C1_SDA —** I^2C1 data input/output (this pin does not use a specialized I^2C pad).
							O	**U3_TXD —** Transmitter output for USART3. See Table 4 for ISP mode.
							I	**CTIN_1 —** SCTimer/PWM input 1. Capture input 1 of timer 0. Capture input 1 of timer 2.
							I/O	**GPIO5[3] —** General purpose digital input/output pin.
							-	**R —** Function reserved.
							O	**T3_MAT0 —** Match output 0 of timer 3.
							O	**USB0_PPWR —** VBUS drive signal (towards external charge pump or power management unit); indicates that VBUS must be driven (active HIGH). Add a pull-down resistor to disable the power switch at reset. This signal has opposite polarity compared to the $\overline{\text{USB\_PPWR}}$ used on other NXP LPC parts.
P2_4	K11	D9	88	128	[3]	N; PU	-	**R —** Function reserved.
							I/O	**I2C1_SCL —** I^2C1 clock input/output (this pin does not use a specialized I^2C pad).
							I	**U3_RXD —** Receiver input for USART3. See Table 4 for ISP mode.
							I	**CTIN_0 —** SCTimer/PWM input 0. Capture input 0 of timer 0, 1, 2, 3.
							I/O	**GPIO5[4] —** General purpose digital input/output pin.
							-	**R —** Function reserved.
							O	**T3_MAT1 —** Match output 1 of timer 3.
							I	**USB0_PWR_FAULT —** Port power fault signal indicating overcurrent condition; this signal monitors over-current on the USB bus (external circuitry required to detect over-current condition).

							-	**R —** Function reserved.
							-	**R —** Function reserved.
							-	**R —** Function reserved.
							O	**I2S0_TX_MCLK —** I^2S transmit master clock.
							I/O	**I2S0_RX_SCK —** I^2S receive clock. It is driven by the master and received by the slave. Corresponds to the signal SCK in the *I^2S-bus specification*.
PF_5	E9	-	-	190	[5]	N; PU	-	**R —** Function reserved.
							I/O	**U3_UCLK —** Serial clock input/output for USART3 in synchronous mode.
							I/O	**SSP1_SSEL —** Slave Select for SSP1.
							O	**TRACEDATA[0] —** Trace data, bit 0.
							I/O	**GPIO7[19] —** General purpose digital input/output pin.
							-	**R —** Function reserved.
							-	**R —** Function reserved.
							-	**R —** Function reserved.
							AI	**ADC1_4 —** ADC1 and ADC0, input channel 4. Configure the pin as GPIO input and use the ADC function select register in the SCU to select the ADC.

7. Functional description

7.1 Architectural overview

The ARM Cortex-M3 includes three AHB-Lite buses: the system bus, the I-code bus, and the D-code bus. The I-code and D-code core buses allow for concurrent code and data accesses from different slave ports.

The LPC185x/3x/2x/1x use a multi-layer AHB matrix to connect the ARM Cortex-M3 buses and other bus masters to peripherals. Flexible connections allow different bus masters to access peripherals that are on different slave ports of the matrix simultaneously.

7.2 ARM Cortex-M3 processor

The ARM Cortex-M3 is a general purpose, 32-bit microprocessor, which offers high performance and low-power consumption. The ARM Cortex-M3 offers many new features, including a Thumb-2 instruction set, low interrupt latency, hardware division, hardware single-cycle multiply, interruptable/continuable multiple load and store instructions, automatic state save and restore for interrupts, tightly integrated interrupt controller with wake-up interrupt controller, and multiple core buses capable of simultaneous accesses.

Pipeline techniques are employed so that all parts of the processing and memory systems can operate continuously. Typically, while one instruction is being executed, its successor is being decoded, and a third instruction is being fetched from memory.

The ARM Cortex-M3 processor is described in detail in the Cortex-M3 Technical Reference Manual.

7.3 System Tick timer (SysTick)

The ARM Cortex-M3 includes a system tick timer (SYSTICK) that is intended to generate a dedicated SYSTICK exception at a 10 ms interval.

- Read and write buffers to reduce latency and to improve performance.
- 8/16/32 data and 24 address lines-wide static memory support.
- 16-bit and 32-bit wide chip select SDRAM memory support.
- Static memory features include:
  - Asynchronous page mode read.
  - Programmable Wait States.
  - Bus turnaround delay.
  - Output enable and write enable delays.
  - Extended wait.
- Four chip selects for synchronous memory and four chip selects for static memory devices.
- Power-saving modes dynamically control CKE and CLKOUT to SDRAMs.
- Software-controlled dynamic memory self-refresh mode.
- Controller supports 2048 (A0 to A10), 4096 (A0 to A11), and 8192 (A0 to A12) row address synchronous memory parts. Those are typically 512 MB, 256 MB, and 128 MB parts.
- Separate reset domains allow auto-refresh through a chip reset if desired.

Note: Synchronous static memory devices (synchronous burst mode) are not supported.

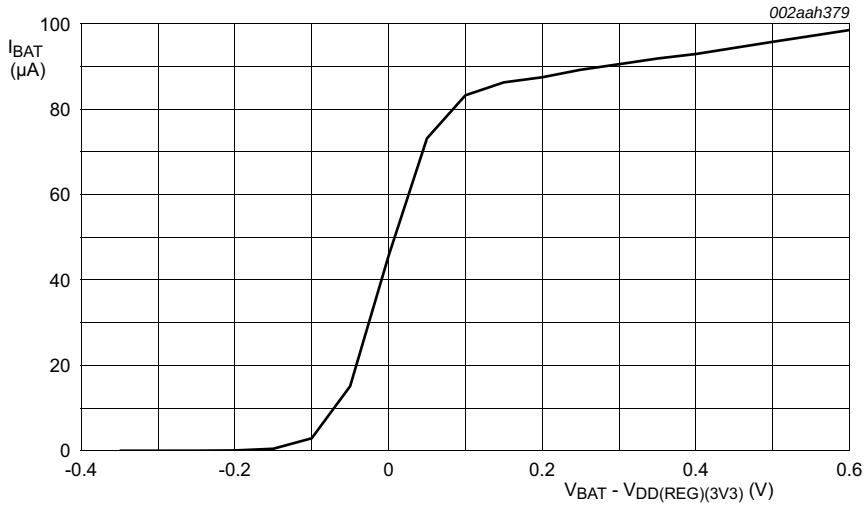
7.15.6 High-speed USB Host/Device/OTG interface (USB0)

Remark: USB0 is available on the following parts: LPC185x, LPC183x, LPC182x. USB0 is not available on the LPC181x parts.

The USB OTG module allows the part to connect directly to a USB host such as a PC (in device mode) or to a USB device in host mode.

7.15.6.1 Features

- On-chip UTMI+ compliant high-speed transceiver (PHY).
- Complies with *Universal Serial Bus specification 2.0*.
- Complies with *USB On-The-Go supplement*.
- Complies with *Enhanced Host Controller Interface Specification*.
- Supports auto USB 2.0 mode discovery.
- Supports all high-speed USB-compliant peripherals.
- Supports all full-speed USB-compliant peripherals.
- Supports software Host Negotiation Protocol (HNP) and Session Request Protocol (SRP) for OTG peripherals.
- Supports interrupts.
- Supports Start Of Frame (SOF) frame length adjust.
- This module has its own, integrated DMA engine.
- USB interface electrical test software included in ROM USB stack.



Conditions: $V_{DD(REG)(3V3)}$ = 3.0 V; V_{BAT} = 2.6 V to 3.6 V; CCLK = 12 MHz.

Remark: The recommended operating condition for the battery supply is $V_{DD(REG)(3V3)} > V_{BAT} + 0.2$ V.

Fig 18. Typical battery supply current in Active mode

10.2 Peripheral power consumption

The typical power consumption at T = 25 °C for each individual peripheral is measured as follows:

1. Enable all branch clocks and measure the current $I_{DD(REG)(3V3)}$.
2. Disable the branch clock to the peripheral to be measured and keep all other branch clocks enabled.
3. Calculate the difference between measurement 1 and 2. The result is the peripheral power consumption.

Table 12. Peripheral power consumption

Peripheral	Branch clock	$I_{DD(REG)(3V3)}$ in mA	
		Branch clock frequency = 48 MHz	Branch clock frequency = 96 MHz
I2C1	CLK_APB3_I2C1	0.01	0.01
I2C0	CLK_APB1_I2C0	< 0.01	0.02
DAC	CLK_APB3_DAC	0.01	0.02
ADC0	CLK_APB3_ADC0	0.07	0.07
ADC1	CLK_APB3_ADC1	0.07	0.07
CAN0	CLK_APB3_CAN0	0.17	0.17
CAN1	CLK_APB1_CAN1	0.16	0.15
MOTOCON	CLK_APB1_MOTOCON	0.04	0.04
I2S	CLK_APB1_I2S	0.09	0.08
SPIFI	CLK_SPIFI, CLK_M3_SPIFI	1.14	2.29
GPIO	CLK_M3_GPIO	0.72	1.43

Table 12. Peripheral power consumption

Peripheral	Branch clock	$I_{DD(REG)(3V3)}$ in mA	
		Branch clock frequency = 48 MHz	Branch clock frequency = 96 MHz
LCD	CLK_M3_LCD	0.91	1.82
ETHERNET	CLK_M3_ETHERNET	1.06	2.15
UART0	CLK_M3_UART0, CLK_APB0_UART0	0.24	0.43
UART1	CLK_M3_UART1, CLK_APB0_UART1	0.24	0.43
UART2	CLK_M3_UART2, CLK_APB2_UART2	0.26	0.5
UART3	CLK_M3_USART3, CLK_APB2_UART3	0.27	0.45
TIMER0	CLK_M3_TIMER0	0.08	0.15
TIMER1	CLK_M3_TIMER1	0.09	0.15
TIMER2	CLK_M3_TIMER2	0.1	0.19
TIMER3	CLK_M3_TIMER3	0.08	0.16
SDIO	CLK_M3_SDIO, CLK_SDIO	0.66	1.17
SCTimer/PWM	CLK_M3_SCT	0.66	1.3
SSP0	CLK_M3_SSP0, CLK_APB0_SSP0	0.13	0.23
SSP1	CLK_M3_SSP1, CLK_APB2_SSP1	0.14	0.27

[1] $T_{cy(clk)}$ = (SSPCLKDIV × (1 + SCR) × CPSDVSR) / f_{main}. The clock cycle time derived from the SPI bit rate $T_{cy(clk)}$ is a function of the main clock frequency f_{main}, the SSP peripheral clock divider (SSPCLKDIV), the SSP SCR parameter (specified in the SSP0CR0 register), and the SSP CPSDVSR parameter (specified in the SSP clock prescale register).

[2] $T_{cy(clk)} \geq 12 \times T_{cy(PCLK)}$.

Table 29. Dynamic characteristics: Dynamic external memory interface

13.2 Crystal oscillator

The crystal oscillator is controlled by the XTAL_OSC_CTRL register in the CGU (see *LPC18xx user manual*).

The crystal oscillator operates at frequencies of 1 MHz to 25 MHz. This frequency can be boosted to a higher frequency, up to the maximum CPU operating frequency, by the PLL.

The oscillator can operate in one of two modes: slave mode and oscillation mode.

- In slave mode, couple the input clock signal with a capacitor of 100 pF (C_C in Figure 41), with an amplitude of at least 200 mV (RMS). The XTAL2 pin in this configuration can be left unconnected.
- External components and models used in oscillation mode are shown in Figure 42, and in Table 42 and Table 43. Since the feedback resistance is integrated on chip, only a crystal and the capacitances C_{X1} and C_{X2} need to be connected externally in case of fundamental mode oscillation (L, C_L and R_S represent the fundamental frequency). Capacitance C_P in Figure 42 represents the parallel package capacitance and must not be larger than 7 pF. Parameters F_C, C_L, R_S and C_P are supplied by the crystal manufacturer.

Table 42. Recommended values for $C_{X1/X2}$ in oscillation mode (crystal and external components parameters) low frequency mode

Fundamental oscillation frequency	Maximum crystal series resistance R_S	External load capacitors C_{X1}, C_{X2}
2 MHz	< 200 Ω	33 pF, 33 pF
	< 200 Ω	39 pF, 39 pF
	< 200 Ω	56 pF, 56 pF
4 MHz	< 200 Ω	18 pF, 18 pF
	< 200 Ω	39 pF, 39 pF
	< 200 Ω	56 pF, 56 pF
8 MHz	< 200 Ω	18 pF, 18 pF
	< 200 Ω	39 pF, 39 pF

19. Legal information

19.1 Data sheet status

Document status[1][2]	Product status[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nxp.com.

19.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

19.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nxp.com/profile/terms, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.
