What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

#### Overview

Zilog's Z8 Encore! XP® F082A Series Flash Microcontrollers are based on Zilog's 8-bit eZ8 CPU core. The Z8 Encore! XP F082A Series Flash Microcontrollers set a new standard for performance and on-chip peripherals.

This Series features 1 KB, 2 KB, 4 KB or 8 KB of non-volatile Flash memory with read/write/erase capability and 256 B to 1 KB of register RAM.

The Z8 Encore! XP F082A Series Flash Microcontrollers feature an 8-channel, 10-bit Analog-to-Digital Converter (ADC). The ADC accepts inputs from eight different analog input pins in both single-ended and differential modes. The Low-Power Operational Amplifier (LPO) is a general-purpose amplifier for current sense applications. An on-

chip temperature sensor allows die temperature measurement over a range of -40 °C to +105 °C.

These devices include two enhanced 16-bit timers with capture, compare, and PWM capabilities. Up to 20 vectored interrupts with three levels of programmable priorities provide increased application flexibility.

The Z8 Encore! XP F082A Series features an onchip Internal Precision Oscillator (IPO). The IPO (5 MHz/32 kHz) is a trimmed clock source that requires no external components.

The new single-pin On-Chip Debugger (OCD) and programming interface simplifies code development and allows easy in-circuit programming.

The full-duplex Universal Asynchronous Receiver/ Transmitter (UART) provides serial communications and Infrared Data Association (IrDA) encoding and decoding capability. The UART Baud Rate Generator (BRG) can be configured and used as a basic 16-bit timer.
