

Welcome to [E-XFL.COM](https://www.e-xfl.com)

### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

#### Details

|                                |   |
|--------------------------------|---|
| Product Status                 | Obsolete  |
| Number of LABs/CLBs            | -   |
| Number of Logic Elements/Cells | -   |
| Total RAM Bits                 | 18432   |
| Number of I/O                  | 91  |
| Number of Gates                | 60000   |
| Voltage - Supply               | 1.425V ~ 1.575V   |
| Mounting Type                  | Surface Mount   |
| Operating Temperature          | -40°C ~ 100°C (TJ)  |
| Package / Case                 | 144-LQFP  |
| Supplier Device Package        | 144-TQFP (20x20)  |

**Notes:**

1. A3P015 is not recommended for new designs.
2. Refer to the [Cortex-M1 product brief](#) for more information.
3. AES is not available for Cortex-M1 ProASIC3 devices.
4. Six chip (main) and three quadrant global networks are available for A3P060 and above.
5. The M1A3P250 device does not support this package.
6. For higher densities and support of additional features, refer to the [ProASIC3E Flash Family FPGAs datasheet](#).
7. Package not available.

---

# 1 – ProASIC3 Device Family Overview

---

## General Description

ProASIC3, the third-generation family of Microsemi flash FPGAs, offers performance, density, and features beyond those of the ProASIC<sup>PLUS</sup>® family. Nonvolatile flash technology gives ProASIC3 devices the advantage of being a secure, low power, single-chip solution that is Instant On. ProASIC3 is reprogrammable and offers time-to-market benefits at an ASIC-level unit cost. These features enable designers to create high-density systems using existing ASIC or FPGA design flows and tools.

ProASIC3 devices offer 1 kbit of on-chip, reprogrammable, nonvolatile FlashROM storage as well as clock conditioning circuitry based on an integrated phase-locked loop (PLL). The A3P015 and A3P030 devices have no PLL or RAM support. ProASIC3 devices have up to 1 million system gates, supported with up to 144 kbits of true dual-port SRAM and up to 300 user I/Os.

ProASIC3 devices support the ARM Cortex-M1 processor. The ARM-enabled devices have Microsemi ordering numbers that begin with M1A3P (Cortex-M1) and do not support AES decryption.

## Flash Advantages

### ***Reduced Cost of Ownership***

Advantages to the designer extend beyond low unit cost, performance, and ease of use. Unlike SRAM-based FPGAs, flash-based ProASIC3 devices allow all functionality to be Instant On; no external boot PROM is required. On-board security mechanisms prevent access to all the programming information and enable secure remote updates of the FPGA logic. Designers can perform secure remote in-system reprogramming to support future design iterations and field upgrades with confidence that valuable intellectual property (IP) cannot be compromised or copied. Secure ISP can be performed using the industry-standard AES algorithm. The ProASIC3 family device architecture mitigates the need for ASIC migration at higher user volumes. This makes the ProASIC3 family a cost-effective ASIC replacement solution, especially for applications in the consumer, networking/ communications, computing, and avionics markets.

### ***Security***

The nonvolatile, flash-based ProASIC3 devices do not require a boot PROM, so there is no vulnerable external bitstream that can be easily copied. ProASIC3 devices incorporate FlashLock, which provides a unique combination of reprogrammability and design security without external overhead, advantages that only an FPGA with nonvolatile flash programming can offer.

ProASIC3 devices utilize a 128-bit flash-based lock and a separate AES key to provide the highest level of protection in the FPGA industry for intellectual property and configuration data. In addition, all FlashROM data in ProASIC3 devices can be encrypted prior to loading, using the industry-leading AES-128 (FIPS192) bit block cipher encryption standard. The AES standard was adopted by the National Institute of Standards and Technology (NIST) in 2000 and replaces the 1977 DES standard. ProASIC3 devices have a built-in AES decryption engine and a flash-based AES key that make them the most comprehensive programmable logic device security solution available today. ProASIC3 devices with AES-based security provide a high level of protection for remote field updates over public networks such as the Internet, and are designed to ensure that valuable IP remains out of the hands of system overbuilders, system cloners, and IP thieves.

ARM-enabled ProASIC3 devices do not support user-controlled AES security mechanisms. Since the ARM core must be protected at all times, AES encryption is always on for the core logic, so bitstreams are always encrypted. There is no user access to encryption for the FlashROM programming data.

Security, built into the FPGA fabric, is an inherent component of the ProASIC3 family. The flash cells are located beneath seven metal layers, and many device design and layout techniques have been used to make invasive attacks extremely difficult. The ProASIC3 family, with FlashLock and AES security, is unique in being highly resistant to both invasive and noninvasive attacks.

The absolute maximum junction temperature is 100°C. EQ 1 shows a sample calculation of the absolute maximum power dissipation allowed for a 484-pin FBGA package at commercial temperature and in still air.

$$\text{Maximum Power Allowed} = \frac{\text{Max. junction temp. (}^\circ\text{C)} - \text{Max. ambient temp. (}^\circ\text{C)}}{\theta_{ja} \text{ (}^\circ\text{C/W)}} = \frac{100^\circ\text{C} - 70^\circ\text{C}}{20.5^\circ\text{C/W}} = 1.463 \text{ W}$$

| 3.3 V LVC MOS Wide Range <sup>3</sup> | 100 $\mu$ A    | 8 mA   | High      | -0.3  | 0.8         | 2           | 3.6   | 0.2         | VCCI - 0.2  | 0.1                 | 0.1                 |
| 2.5 V LVC MOS                         | 8 mA           | 8 mA   | High      | -0.3  | 0.7         | 1.7         | 2.7   | 0.7         | 1.7         | 8                   | 8                   |
| 1.8 V LVC MOS                         | 4 mA           | 4 mA   | High      | -0.3  | 0.35 * VCCI | 0.65 * VCCI | 3.6   | 0.45        | VCCI - 0.45 | 4                   | 4                   |
| 1.5 V LVC MOS                         | 2 mA           | 2 mA   | High      | -0.3  | 0.35 * VCCI | 0.65 * VCCI | 3.6   | 0.25 * VCCI | 0.75 * VCCI | 2                   | 2                   |

**Notes:**

1. Currents are measured at 85°C junction temperature.
2. 3.3 V LVC MOS wide range is applicable to 100  $\mu$ A drive strength only. The configuration will NOT operate at the equivalent software default drive strength. These values are for Normal Ranges ONLY.
3. All LVC MOS 3.3 V software macros support LVC MOS 3.3 V wide range as specified in the JESD-8B specification.

**Notes:**

1. Commercial range ( $0^{\circ}\text{C} < T_A < 70^{\circ}\text{C}$ )
2. Industrial range ( $-40^{\circ}\text{C} < T_A < 85^{\circ}\text{C}$ )
3. IIL is the input leakage current per I/O pin over recommended operation conditions where  $-0.3\text{V} < V_{IN} < V_{IL}$ .
4. IIH is the input leakage current per I/O pin over recommended operating conditions  $V_{IH} < V_{IN} < V_{CCI}$ . Input current is larger when operating outside recommended ranges.

## I/O DC Characteristics

**Table 2-27 • Input Capacitance**

| Symbol             | Definition                         | Conditions                       | Min | Max | Units |
|--------------------|------------------------------------|----------------------------------|-----|-----|-------|
| C <sub>IN</sub>    | Input capacitance                  | V <sub>IN</sub> = 0, f = 1.0 MHz | –   | 8   | pF    |
| C <sub>INCLK</sub> | Input capacitance on the clock pin | V <sub>IN</sub> = 0, f = 1.0 MHz | –   | 8   | pF    |

|                                      | 16 mA                       | 20                                      | 22                                    |
| 1.5 V LVCMOS                         | 2 mA                        | 200                                     | 224                                   |
|                                      | 4 mA                        | 100                                     | 112                                   |
|                                      | 6 mA                        | 67                                      | 75                                    |
|                                      | 8 mA                        | 33                                      | 37                                    |
|                                      | 12 mA                       | 33                                      | 37                                    |
| 3.3 V PCI/PCI-X                      | Per PCI/PCI-X specification | 25                                      | 75                                    |

**Notes:**

1. These maximum values are provided for informational reasons only. Minimum output buffer resistance values depend on V<sub>CCI</sub>, drive strength selection, temperature, and process. For board design considerations and detailed output buffer resistances, use the corresponding IBIS models located at <http://www.microsemi.com/soc/download/ibis/default.aspx>.
2.  $R_{(PULL-DOWN-MAX)} = (VOL_{spec}) / IOL_{spec}$
3.  $R_{(PULL-UP-MAX)} = (VCCImax - VOH_{spec}) / IOH_{spec}$
4. All LVCMOS 3.3 V software macros support LVCMOS 3.3 V wide range as specified in the JESD-8B specification.

| AND3               | $Y = A \cdot B \cdot C$   | $t_{PD}$  | 0.56 | 0.64 | 0.75 | ns    |

*Note:* For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-6 for derating values.

### VersaTile Specifications as a Sequential Module

The ProASIC3 library offers a wide variety of sequential cells, including flip-flops and latches. Each has a data input and optional enable, clear, or preset. In this section, timing characteristics are presented for a representative sample from the library. For more details, refer to the *Fusion, IGLOO/e, and ProASIC3/E Macro Library Guide*.

**Figure 2-26 • Sample of Sequential Cells**

**Table 2-123 • A3P250 FIFO 4k×1 (continued)**  
**Worst Commercial-Case Conditions: T<sub>J</sub> = 70°C, VCC = 1.425 V**

| Parameter            | Description                                    | -2   | -1   | Std. | Units |
|----------------------|--|------|------|------|-------|
| t <sub>RSTAF</sub>   | RESET Low to Almost Empty/Full Flag Valid      | 6.13 | 6.98 | 8.20 | ns    |
| t <sub>RSTBQ</sub>   | RESET Low to Data Out Low on DO (pass-through) | 0.92 | 1.05 | 1.23 | ns    |
|                      | RESET Low to Data Out Low on DO (pipelined)    | 0.92 | 1.05 | 1.23 | ns    |
| t <sub>REMRSTB</sub> | RESET Removal                                  | 0.29 | 0.33 | 0.38 | ns    |

| Parameter         | Description             | -2    | -1    | Std.  | Units |
|-------------------|-------------------------|-------|-------|-------|-------|
| t <sub>SU</sub>   | Address Setup Time      | 0.53  | 0.61  | 0.71  | ns    |
| t <sub>HOLD</sub> | Address Hold Time       | 0.00  | 0.00  | 0.00  | ns    |
| t <sub>CK2Q</sub> | Clock to Out            | 21.42 | 24.40 | 28.68 | ns    |
| F <sub>MAX</sub>  | Maximum Clock Frequency | 15    | 15    | 15    | MHz   |

---

## 3 – Pin Descriptions

---

### Supply Pins

**GND**                      **Ground**

Ground supply voltage to the core, I/O outputs, and I/O logic.

**GNDQ**                      **Ground (quiet)**

Quiet ground supply voltage to input buffers of I/O banks. Within the package, the GNDQ plane is decoupled from the simultaneous switching noise originated from the output buffer ground domain. This minimizes the noise transfer within the package and improves input signal integrity. GNDQ must always be connected to GND on the board.

**VCC**                          **Core Supply Voltage**

Supply voltage to the FPGA core, nominally 1.5 V. VCC is required for powering the JTAG state machine in addition to VJTAG. Even when a device is in bypass mode in a JTAG chain of interconnected devices, both VCC and VJTAG must remain powered to allow JTAG signals to pass through the device.

**VCCIBx**                      **I/O Supply Voltage**

Supply voltage to the bank's I/O output buffers and I/O logic. Bx is the I/O bank number. There are up to eight I/O banks on low power flash devices plus a dedicated VJTAG bank. Each bank can have a separate VCCI connection. All I/Os in a bank will run off the same VCCIBx supply. VCCI can be 1.5 V, 1.8 V, 2.5 V, or 3.3 V, nominal voltage. In general, unused I/O banks should have their corresponding VCCIX pins tied to GND. If an output pad is terminated to ground through any resistor and if the corresponding VCCIX is left floating, then the leakage current to ground is ~ 0uA. However, if an output pad is terminated to ground through any resistor and the corresponding VCCIX grounded, then the leakage current to ground is ~ 3 uA. For unused banks the aforementioned behavior is to be taken into account while deciding if it's better to float VCCIX of unused bank or tie it to GND.

**VMVx**                          **I/O Supply Voltage (quiet)**

Quiet supply voltage to the input buffers of each I/O bank. x is the bank number. Within the package, the VMV plane biases the input stage of the I/Os in the I/O banks. This minimizes the noise transfer within the package and improves input signal integrity. Each bank must have at least one VMV connection, and no VMV should be left unconnected. All I/Os in a bank run off the same VMVx supply. VMV is used to provide a quiet supply voltage to the input buffers of each I/O bank. VMVx can be 1.5 V, 1.8 V, 2.5 V, or 3.3 V, nominal voltage. Unused I/O banks should have their corresponding VMV pins tied to GND. VMV and VCCI should be at the same voltage within a given I/O bank. Used VMV pins must be connected to the corresponding VCCI pins of the same bank (i.e., VMV0 to VCCIB0, VMV1 to VCCIB1, etc.).

**VCCPLA/B/C/D/E/F**      **PLL Supply Voltage**

Supply voltage to analog PLL, nominally 1.5 V.

When the PLLs are not used, the Designer place-and-route tool automatically disables the unused PLLs to lower power consumption. The user should tie unused VCCPLx and VCOMPLx pins to ground. Microsemi recommends tying VCCPLx to VCC and using proper filtering circuits to decouple VCC noise from the PLLs. Refer to the PLL Power Supply Decoupling section of the "Clock Conditioning Circuits in IGLOO and ProASIC3 Devices" chapter of the *ProASIC3 FPGA Fabric User's Guide* for a complete board solution for the PLL analog power supply and ground.

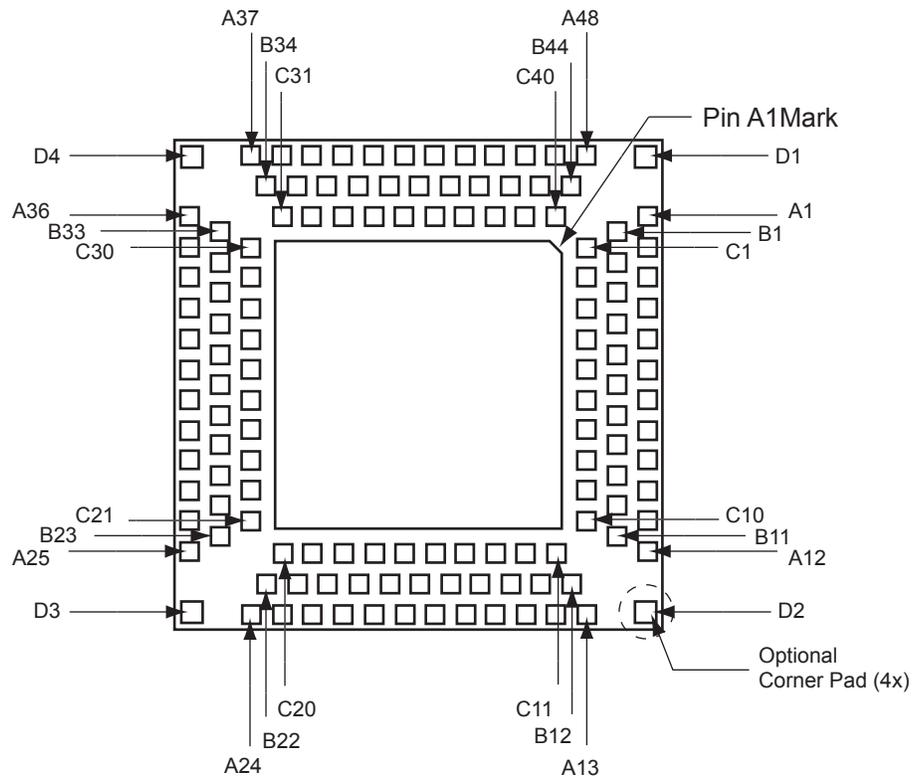

There is one VCCPLF pin on ProASIC3 devices.

**VCOMPLA/B/C/D/E/F**      **PLL Ground**

Ground to analog PLL power supplies. When the PLLs are not used, the Designer place-and-route tool automatically disables the unused PLLs to lower power consumption. The user should tie unused VCCPLx and VCOMPLx pins to ground.

There is one VCOMPLF pin on ProASIC3 devices.

## QN132 – Bottom View

### Notes:

1. The die attach paddle center of the package is tied to ground (GND).
2. Option corner pads come with this device and package combination. It is optional to tie them to ground or leave them floating.
3. The QN132 package is discontinued and is not available for ProASIC3 devices.
4. For more information on package drawings, see [PD3068: Package Mechanical Drawings](#).

| Revision                                 | Changes  | Page         |
|--|--|--------------|
| v2.0<br>(continued)                      | Table 3-20 • Summary of I/O Timing Characteristics—Software Default Settings (Advanced) and Table 3-21 • Summary of I/O Timing Characteristics—Software Default Settings (Standard Plus) were updated. | 3-20 to 3-20 |
|  | Table 3-11 • Different Components Contributing to Dynamic Power Consumption in ProASIC3 Devices was updated.   | 3-9          |
|  | Table 3-24 • I/O Output Buffer Maximum Resistances1 (Advanced) and Table 3-25 • I/O Output Buffer Maximum Resistances1 (Standard Plus) were updated.   | 3-22 to 3-22 |
|  | Table 3-17 • Summary of Maximum and Minimum DC Input Levels Applicable to Commercial and Industrial Conditions was updated.  | 3-18         |
|  | Table 3-28 • I/O Short Currents IOSH/IOSL (Advanced) and Table 3-29 • I/O Short Currents IOSH/IOSL (Standard Plus) were updated.   | 3-24 to 3-26 |
|  | The note in Table 3-32 • I/O Input Rise Time, Fall Time, and Related I/O Reliability was updated.  | 3-27         |
|  | Figure 3-33 • Write Access After Write onto Same Address, Figure 3-34 • Read Access After Write onto Same Address, and Figure 3-35 • Write Access After Read onto Same Address are new.                | 3-82 to 3-84 |
|  | Figure 3-43 • Timing Diagram was updated.  | 3-96         |
|  | Ambient was deleted from the "Speed Grade and Temperature Grade Matrix".   | iv           |
|  | Notes were added to the package diagrams identifying if they were top or bottom view.  | N/A          |
|  | The A3P030 "132-Pin QFN" table is new.   | 4-2          |
|  | The A3P060 "132-Pin QFN" table is new.   | 4-4          |
|  | The A3P125 "132-Pin QFN" table is new.   | 4-6          |
|  | The A3P250 "132-Pin QFN" table is new.   | 4-8          |
| The A3P030 "100-Pin VQFP" table is new.  | 4-11   |              |
| Advance v0.7<br>(January 2007)           | In the "I/Os Per Package" table, the I/O numbers were added for A3P060, A3P125, and A3P250. The A3P030-VQ100 I/O was changed from 79 to 77.  | ii           |
| Advance v0.6<br>(April 2006)             | The term flow-through was changed to pass-through.   | N/A          |
|  | Table 1 was updated to include the QN132.  | ii           |
|  | The "I/Os Per Package" table was updated with the QN132. The footnotes were also updated. The A3P400-FG144 I/O count was updated.  | ii           |
|  | "Automotive ProASIC3 Ordering Information" was updated with the QN132.   | iii          |
|  | "Temperature Grade Offerings" was updated with the QN132.  | iii          |
|  | B-LVDS and M-LDVS are new I/O standards added to the datasheet.  | N/A          |
|  | The term flow-through was changed to pass-through.   | N/A          |
|  | Figure 2-7 • Efficient Long-Line Resources was updated.  | 2-7          |
|  | The footnotes in Figure 2-15 • Clock Input Sources Including CLKBUF, CLKBUF_LVDS/LVPECL, and CLKINT were updated.  | 2-16         |
|  | The Delay Increments in the Programmable Delay Blocks specification in Figure 2-24 • ProASIC3E CCC Options.  | 2-24         |
| The "SRAM and FIFO" section was updated. | 2-21   |              |
