Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Obsolete
Number of LABs/CLBs	-
Number of Logic Elements/Cells	-
Total RAM Bits	36864
Number of I/O	100
Number of Gates	125000
Voltage - Supply	1.425V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	144-LQFP
Supplier Device Package	144-TQFP (20x20)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/a3p125-1tq144i

I/Os with Advanced I/O Standards

The ProASIC3 family of FPGAs features a flexible I/O structure, supporting a range of voltages (1.5 V, 1.8 V, 2.5 V, and 3.3 V). ProASIC3 FPGAs support many different I/O standards—single-ended and differential.

The I/Os are organized into banks, with two or four banks per device. The configuration of these banks determines the I/O standards supported (Table 1-1).

Table 1-1 • **I/O Standards Supported**

I/O Bank Type	Device and Bank Location	I/O Standards Supported		
		LVTTL/ LVCMOS	PCI/PCI-X	LVPECL, LVDS, B-LVDS, M-LVDS
Advanced	East and west Banks of A3P250 and larger devices	✓	✓	✓
Standard Plus	North and south banks of A3P250 and larger devices All banks of A3P060 and A3P125	✓	✓	Not supported
Standard	All banks of A3P015 and A3P030	✓	Not supported	Not supported

Each I/O module contains several input, output, and enable registers. These registers allow the implementation of the following:

- Single-Data-Rate applications
- Double-Data-Rate applications—DDR LVDS, B-LVDS, and M-LVDS I/Os for point-to-point communications

ProASIC3 banks for the A3P250 device and above support LVPECL, LVDS, B-LVDS and M-LVDS. B-LVDS and M-LVDS can support up to 20 loads.

Hot-swap (also called hot-plug, or hot-insertion) is the operation of hot-insertion or hot-removal of a card in a powered-up system.

Cold-sparing (also called cold-swap) refers to the ability of a device to leave system data undisturbed when the system is powered up, while the component itself is powered down, or when power supplies are floating.

Wide Range I/O Support

ProASIC3 devices support JEDEC-defined wide range I/O operation. ProASIC3 supports the JESD8-B specification, covering both 3 V and 3.3 V supplies, for an effective operating range of 2.7 V to 3.6 V.

Wider I/O range means designers can eliminate power supplies or power conditioning components from the board or move to less costly components with greater tolerances. Wide range eases I/O bank management and provides enhanced protection from system voltage spikes, while providing the flexibility to easily run custom voltage applications.

Specifying I/O States During Programming

You can modify the I/O states during programming in FlashPro. In FlashPro, this feature is supported for PDB files generated from Designer v8.5 or greater. See the *FlashPro User's Guide* for more information.

Note: PDB files generated from Designer v8.1 to Designer v8.4 (including all service packs) have limited display of Pin Numbers only.

1. Load a PDB from the FlashPro GUI. You must have a PDB loaded to modify the I/O states during programming.
2. From the FlashPro GUI, click PDB Configuration. A FlashPoint – Programming File Generator window appears.
3. Click the Specify I/O States During Programming button to display the Specify I/O States During Programming dialog box.
4. Sort the pins as desired by clicking any of the column headers to sort the entries by that header. Select the I/Os you wish to modify (Figure 1-4 on page 1-8).
5. Set the I/O Output State. You can set Basic I/O settings if you want to use the default I/O settings for your pins, or use Custom I/O settings to customize the settings for each pin. Basic I/O state settings:

   1 – I/O is set to drive out logic High

B-LVDS/M-LVDS

Bus LVDS (B-LVDS) and Multipoint LVDS (M-LVDS) specifications extend the existing LVDS standard to high-performance multipoint bus applications. Multidrop and multipoint bus configurations may contain any combination of drivers, receivers, and transceivers. Microsemi LVDS drivers provide the higher drive current required by B-LVDS and M-LVDS to accommodate the loading. The drivers require series terminations for better signal quality and to control voltage swing. Termination is also required at both ends of the bus since the driver can be located anywhere on the bus. These configurations can be implemented using the TRIBUF_LVDS and BIBUF_LVDS macros along with appropriate terminations. Multipoint designs using Microsemi LVDS macros can achieve up to 200 MHz with a maximum of 20 loads. A sample application is given in Figure 2-13. The input and output buffer delays are available in the LVDS section in Table 2-92.

Example: For a bus consisting of 20 equidistant loads, the following terminations provide the required differential voltage, in worst-case Industrial operating conditions, at the farthest receiver: R_S = 60 Ω and R_T = 70 Ω, given Z_0 = 50 Ω (2") and Z_{stub} = 50 Ω (~1.5").

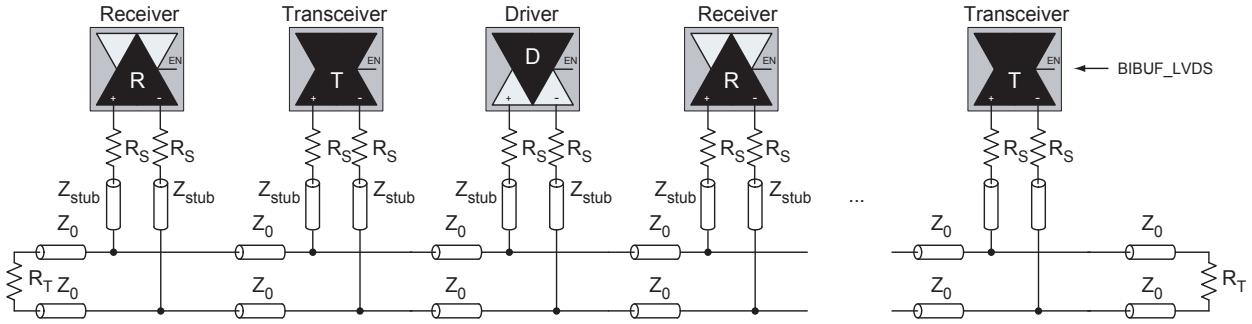

Figure 2-13 • **B-LVDS/M-LVDS Multipoint Application Using LVDS I/O Buffers**

LVPECL

Low-Voltage Positive Emitter-Coupled Logic (LVPECL) is another differential I/O standard. It requires that one data bit be carried through two signal lines. Like LVDS, two pins are needed. It also requires external resistor termination.

The full implementation of the LVDS transmitter and receiver is shown in an example in Figure 2-14. The building blocks of the LVPECL transmitter-receiver are one transmitter macro, one receiver macro, three board resistors at the transmitter end, and one resistor at the receiver end. The values for the three driver resistors are different from those used in the LVDS implementation because the output standard specifications are different.

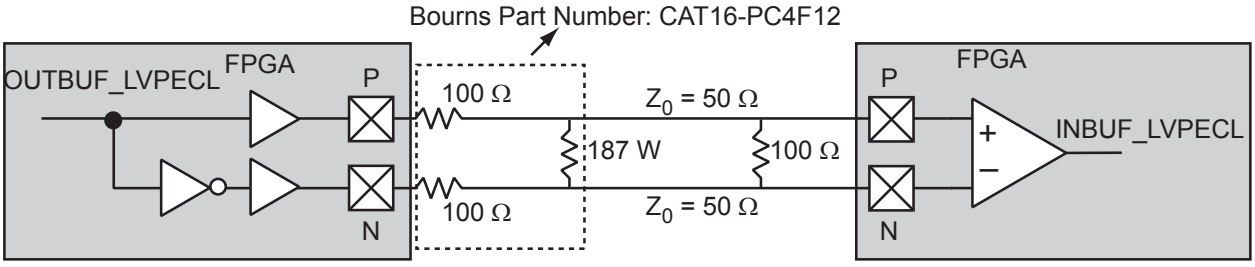

Figure 2-14 • **LVPECL Circuit Diagram and Board-Level Implementation**

5 – Datasheet Information

List of Changes

The following table lists critical changes that were made in each version of the ProASIC3 datasheet.

Revision	Changes	Page
Revision 18 (March 2016)	Updated 3.3 V DC supply voltage's maximum Commercial and Industrial values from 3.3 V to 3.6 V in Table 2-2 (SAR 72693).	2-2
	Added reference of Package Mechanical Drawings document in all package pin assignment notes (76833).	NA
Revision 17 (June 2015)	Removed PQFP embedded heat spreader info. from Table 2-5 (SAR 52320).	2-6
	Updated "VCCIBx I/O Supply Voltage" (SAR 43323).	3-1
Revision 16 (December 2014)	Updated "ProASIC3 Ordering Information". Interchanged the positions of Y- Security Feature and I- Application (Temperature Range) (SAR 61079). Added Note "Only devices with package size greater than or equal to 5x5 are supported".	1-IV
	Updated Table Note (2) in Table 2-3 • Flash Programming Limits – Retention, Storage and Operating Temperature so that the Table Note is not applicable for Maximum Storage Temperature T_{STG} (SAR 54297).	2-3
	Added values for Drive strength 2 mA in Table 2-41 • 3.3 V LVTTL / 3.3 V LVCMOS High Slew, Table 2-42 • 3.3 V LVTTL / 3.3 V LVCMOS Low Slew, Table 2-43 • 3.3 V LVTTL / 3.3 V LVCMOS High Slew, and Table 2-44 • 3.3 V LVTTL / 3.3 V LVCMOS Low Slew (SAR 57184).	2-34, 2-35, 2-36, 2-37
	Added Figure 2-1 • High-Temperature Data Retention (HTR) (SAR 45466).	2-3
	Updates made to maintain the style and consistency of the document.	NA
Revision 15 (July 2014)	Added corner pad table note (3) to "QN132 – Bottom View" (SAR 47442).	4-6
	Ambient temperature removed in Table 2-2, table notes and "ProASIC3 Ordering Information" figure were modified (SAR 48343).	2-2 1-IV
	Other updates were made to maintain the style and consistency of the datasheet.	NA
Revision 14 (April 2014)	Note added for the discontinuance of QN132 package to the following tables and section: "ProASIC3 Devices", "I/Os Per Package 1", "ProASIC3 FPGAs Package Sizes Dimensions" and "QN132 – Bottom View" section (SAR 55118).	I, III, 4-6

Revision	Changes	Page
Revision 11 (March 2012)	Note indicating that A3P015 is not recommended for new designs has been added. The "Devices Not Recommended For New Designs" section is new (SAR 36760).	I to IV
	The following sentence was removed from the Advanced Architecture section: "In addition, extensive on-chip programming circuitry allows for rapid, single-voltage (3.3 V) programming of IGLOO devices via an IEEE 1532 JTAG interface" (SAR 34687).	NA
	The reference to guidelines for global spines and VersaTile rows, given in the "Global Clock Contribution—PCLOCK" section, was corrected to the "Spine Architecture" section of the Global Resources chapter in the *ProASIC3 FPGA Fabric User's Guide* (SAR 34734).	2-12
	Figure 2-4 • Input Buffer Timing Model and Delays (Example) has been modified for the DIN waveform; the Rise and Fall time label has been changed to tDIN (35430).	2-16
	The AC Loading figures in the "Single-Ended I/O Characteristics" section were updated to match tables in the "Summary of I/O Timing Characteristics – Default I/O Software Settings" section (SAR 34883).	2-32
	Added values for minimum pulse width and removed the FRMAX row from Table 2-107 through Table 2-114 in the "Global Tree Timing Characteristics" section. Use the software to determine the FRMAX for the device you are using (SARs 37279, 29269).	2-85

Revision	Changes	Page
Advance v0.6 (continued)	The "RESET" section was updated.	2-25
	The "WCLK and RCLK" section was updated.	2-25
	The "RESET" section was updated.	2-25
	The "RESET" section was updated.	2-27
	The "Introduction" of the "Advanced I/Os" section was updated.	2-28
	The "I/O Banks" section is new. This section explains the following types of I/Os: Advanced Standard+ Standard Table 2-12 • Automotive ProASIC3 Bank Types Definition and Differences is new. This table describes the standards listed above.	2-29
	PCI-X 3.3 V was added to the Compatible Standards for 3.3 V in Table 2-11 • VCCI Voltages and Compatible Standards	2-29
	Table 2-13 • ProASIC3 I/O Features was updated.	2-30
	The "Double Data Rate (DDR) Support" section was updated to include information concerning implementation of the feature.	2-32
	The "Electrostatic Discharge (ESD) Protection" section was updated to include testing information.	2-35
	Level 3 and 4 descriptions were updated in Table 2-43 • I/O Hot-Swap and 5 V Input Tolerance Capabilities in ProASIC3 Devices.	2-64
	The notes in Table 2-43 • I/O Hot-Swap and 5 V Input Tolerance Capabilities in ProASIC3 Devices were updated.	2-64
	The "Simultaneous Switching Outputs (SSOs) and Printed Circuit Board Layout" section is new.	2-41
	A footnote was added to Table 2-14 • Maximum I/O Frequency for Single-Ended and Differential I/Os in All Banks in Automotive ProASIC3 Devices (maximum drive strength and high slew selected).	2-30
	Table 2-18 • Automotive ProASIC3 I/O Attributes vs. I/O Standard Applications	2-45
	Table 2-50 • ProASIC3 Output Drive (OUT_DRIVE) for Standard I/O Bank Type (A3P030 device)	2-83
	Table 2-51 • ProASIC3 Output Drive for Standard+ I/O Bank Type was updated.	2-84
	Table 2-54 • ProASIC3 Output Drive for Advanced I/O Bank Type was updated.	2-84
	The "x" was updated in the "User I/O Naming Convention" section.	2-48
	The "VCC Core Supply Voltage" pin description was updated.	2-50
	The "VMVx I/O Supply Voltage (quiet)" pin description was updated to include information concerning leaving the pin unconnected.	2-50
	The "VJTAG JTAG Supply Voltage" pin description was updated.	2-50
	The "VPUMP Programming Supply Voltage" pin description was updated to include information on what happens when the pin is tied to ground.	2-50
	The "I/O User Input/Output" pin description was updated to include information on what happens when the pin is unused.	2-50
	The "JTAG Pins" section was updated to include information on what happens when the pin is unused.	2-51

Revision	Changes	Page
Advance v0.6 (continued)	The "Programming" section was updated to include information concerning serialization.	2-53
	The "JTAG 1532" section was updated to include SAMPLE/PRELOAD information.	2-54
	"DC and Switching Characteristics" chapter was updated with new information.	3-1
	The A3P060 "100-Pin VQFP" pin table was updated.	4-13
	The A3P125 "100-Pin VQFP" pin table was updated.	4-13
	The A3P060 "144-Pin TQFP" pin table was updated.	4-16
	The A3P125 "144-Pin TQFP" pin table was updated.	4-18
	The A3P125 "208-Pin PQFP" pin table was updated.	4-21
	The A3P400 "208-Pin PQFP" pin table was updated.	4-25
	The A3P060 "144-Pin FBGA" pin table was updated.	4-32
	The A3P125 "144-Pin FBGA" pin table is new.	4-34
	The A3P400 "144-Pin FBGA" is new.	4-38
	The A3P400 "256-Pin FBGA" was updated.	4-48
	The A3P1000 "256-Pin FBGA" was updated.	4-54
	The A3P400 "484-Pin FBGA" was updated.	4-58
	The A3P1000 "484-Pin FBGA" was updated.	4-68
	The A3P250 "100-Pin VQFP*" pin table was updated.	4-14
	The A3P250 "208-Pin PQFP*" pin table was updated.	4-23
	The A3P1000 "208-Pin PQFP*" pin table was updated.	4-29
	The A3P250 "144-Pin FBGA*" pin table was updated.	4-36
	The A3P1000 "144-Pin FBGA*" pin table was updated.	4-32
	The A3P250 "256-Pin FBGA*" pin table was updated.	4-45
	The A3P1000 "256-Pin FBGA*" pin table was updated.	4-54
	The A3P1000 "484-Pin FBGA*" pin table was updated.	4-68
Advance v0.5 (November 2005)	The "I/Os Per Package" table was updated for the following devices and packages: Device — Package A3P250/M7ACP250 — VQ100 A3P250/M7ACP250 — FG144 A3P1000 — FG256	ii
Advance v0.4	M7 device information is new.	N/A
	The I/O counts in the "I/Os Per Package" table were updated.	ii
Advance v0.3	The "I/Os Per Package" table was updated.	ii
	M7 device information is new.	N/A
	Table 2-4 • ProASIC3 Globals/Spines/Rows by Device was updated to include the number or rows in each top or bottom spine.	2-16
	EXTFB was removed from Figure 2-24 • ProASIC3E CCC Options.	2-24

Datasheet Categories

Categories

In order to provide the latest information to designers, some datasheet parameters are published before data has been fully characterized from silicon devices. The data provided for a given device, as highlighted in the "ProASIC3 Device Status" table on page IV, is designated as either "Product Brief," "Advance," "Preliminary," or "Production." The definitions of these categories are as follows:

Product Brief

The product brief is a summarized version of a datasheet (advance or production) and contains general product information. This document gives an overview of specific device and family information.

Advance

This version contains initial estimated information based on simulation, other products, devices, or speed grades. This information can be used as estimates, but not for production. This label only applies to the DC and Switching Characteristics chapter of the datasheet and will only be used when the data has not been fully characterized.

Preliminary

The datasheet contains information based on simulation and/or initial characterization. The information is believed to be correct, but changes are possible.

Unmarked (production)

This version contains information that is considered to be final.

Export Administration Regulations (EAR)

The products described in this document are subject to the Export Administration Regulations (EAR). They could require an approved export license prior to export from the United States. An export includes release of product or disclosure of technology to a foreign national inside or outside the United States.

Safety Critical, Life Support, and High-Reliability Applications Policy

The products described in this advance status document may not have completed the Microsemi qualification process. Products may be amended or enhanced during the product introduction and qualification process, resulting in changes in device functionality or performance. It is the responsibility of each customer to ensure the fitness of any product (but especially a new product) for a particular purpose, including appropriateness for safety-critical, life-support, and other high-reliability applications. Consult the Microsemi SoC Products Group Terms and Conditions for specific liability exclusions relating to life-support applications. A reliability report covering all of the SoC Products Group’s products is available at http://www.microsemi.com/soc/documents/ORT_Report.pdf. Microsemi also offers a variety of enhanced qualification and lot acceptance screening procedures. Contact your local sales office for additional reliability information.
